PNM is proactively seeking information on emerging technologies and new power resources

(Albuquerque, NM) – PNM is issuing two requests for information (RFIs) on energy resources and emerging technologies that could help the company toward its carbon-free goal.

The first request will help identify potential future generation resources that PNM could place into service in the 2028 to 2033 timeframe. Through this request, we will collect information on resources that PNM could pursue to install up to 600 MW of generating resources. This Future Generation request for information is designed to encourage resources that have long-lead development activities so they are ready to be considered in future requests for new resources.

The second request seeks emerging technologies that PNM could consider in its 2023 Integrated Resource Plan; a 20-year resource outlook that PNM develops with community partners every three years. The information collected through this request will aim to support PNM in its transition to 100-percent carbon-free electricity.

Both requests for information are being pursued with a June 15 deadline, with supplemental information due by September 15, and respondents are welcome to respond to either or both as appropriate. However, the information requested is very distinct for each submittal as described in the requests for information and responses will only be considered for the request in which a response is submitted.

Registration and Responses Submittals

These RFIs will be managed through a PNM Supply Chain Sourcing site hosted by SciQuest, an affiliated entity of Jaggaer®. The Instructions to Respondents document for each RFI are provided as non-confidential documents on the PNM websites identified below:

- <https://bids.sciquest.com/apps/Router/PublicEvent?CustomerOrg=PNMResources>
- <https://www.pnm.com/rfp>

In order to preserve transparency in the process and facilitate equal consideration to all respondents, Respondents must not contact any PNM employees or agents of the company in regard to these RFIs. All communications are to be conducted through PNM Supply Chain Sourcing site.

A schedule for the RFIs events has been posted within the RFI's instructions. Important deadlines include:

- **Initial Response due by June 15, 2022**
- **Supplemental information allowed through September 15, 2022 (but only if Initial Response received by June 15)**

About PNM

With headquarters in Albuquerque, PNM is the largest electricity provider in New Mexico, serving more than 530,000 customers in dozens of communities across the state. PNM strives to create enduring value for customers, communities and shareholders built on a foundation of Environmental, Social and Governance Principles. At the core of our business, we are focused on our vision of creating a clean and bright energy future, our purpose of working together with our customers and community to serve their energy needs, and our values of safety, caring, and integrity. PNM is a subsidiary of PNM Resources, an energy holding company also headquartered in Albuquerque. Visit PNM.com for more information.
