Capital Budget Documentation

PNM Exhibit HEM-9

Is contained in the following 4803 pages

Projects limited to those with clearings:
In 2014, July through December
In 2015, January through December
In 2016, January through December

Contents

Project Type: 01-Distribution 29
Project No: 10000107 Line Extensions - Residential 30
Project No: 10000207 Line Extension - Commercial 37
Project No: 10000507 Lighting 44
Project No: 10000607 Distr. Remove & Replace 51
Project No: 10000707 System Improvements 58
Project No: 10000807 Services 65
Project No: 10000907 Transformers 72
Project No: 10001007 Meter Equipment 79
Project No: 10001207 Pole Replacement 86
Project No: 10001307 Cable Replacement 93
Project No: 10001614 Hawkins Feeder 22 100

Project No: 10001615 Hawkins Feeder 21 107
Project No: 10001707 Albuquerque Pure Project 114
Project No: 10001814 Hazeldine Voltage Conversion 121
Project No: 10001914 Keleher Substation and Ball Park 13 Voltage Conversion 128
Project No: 10002010 Four Hills 13 to Lawrence 14 Feeder Tie 135
Project No: 10002014 Ball Park 14 Voltage Conversion 142
Project No: 10002114 Ball Park 11 Voltage Conversion 149
Project No: 10002210 Bird Guard Project ABQ 156
Project No: 10002214 Hawkins Feeder 23 163
Project No: 10002314 Albuquerque Feeder testing and repl 170
Project No: 10002513 Upgrade the RCCS System 177
Project No: 10002514 Coronado Improvements 184
Project No: 10030514 ESC RO Warehouse Roof Replacement 191
Project No: 10030610 Communications Equipment Capital Budget 198
Project No: 10030814 Line Dept HVAC Replacement 205
Project No: 10032014 Ice Machine ESC Tool Room 212
Project No: 10032114 Desk for Veg Management 219
Project No: 10032214 DOC Ops Upgrades 226
Project No: 10034007 ABQ Metro Tools & Equipment 233
Project No: 10034012 Tech Serv Distr Tools 240
Project No: 14000107 Line Extensions - Residential 247
Project No: 14000207 Line Extensions - Commercial 254
Project No: 14000607 Distr. Remove & Replace 261
Project No: 14000707 Distr. System Improvements 268
Project No: 14000807 Services 275
Project No: 14001612 Tijeras 11 4/0 ACSR to 397 AAC 282

Project No: 14001614 Zamora 12 SCADA controlled V Reg 289
Project No: 14001615 San Antonito 12 Reconductor 296
Project No: 14001707 Abq East Mtn Pure Project 303
Project No: 14001714 11 and Zamora 11 2/0 ACSR to 397 AAC 310
Project No: 14001814 Sedillo Rd 3-Phase Rebuild 317
Project No: 14001914 Open Meadow Drive 3-Phase Rebuild 324
Project No: 14002014 San Antonito 12 to San Antonito 22 Feeder Tie 331
Project No: 14002114 Dressage Drive 3-Phase 338
Project No: 20000107 Line Extension - Residential 345
Project No: 20000207 Line Extensions - Commercial 352
Project No: 20000507 Lighting 359
Project No: 20000607 Distr. Remove & Replace 366
Project No: 20000707 Distr. System Improvements 373
Project No: 20000807 Services 380
Project No: 20001207 Pole Replacements 387
Project No: 20001613 Renewable Solar 22MW-Deming 394
Project No: 20001707 Deming Pure Project 401
Project No: 20001711 Deming Capital Bird Guard Project 408
Project No: 20001713 Gold 12 Deming West 13 415
Project No: 20001813 Deming Distribution Transformers 422
Project No: 20034009 Deming Tools & Equipment 429
Project No: 30000107 LV-Line Extensions - Residential 436
Project No: 30000207 Line Extension - Commercial 443
Project No: 30000607 Distr. Remove & Replace 450
Project No: 30000707 Distr. system Improvements 457
Project No: 30000807 Services 464

Project No: 30001207 Pole Replacement 471
Project No: 30001307 Las Vegas Cable Replacements 478
Project No: 30001707 Las Vegas Pure Project 485
Project No: 30034007 Tools & Equipment 492
Project No: 41000107 Line Extensions - Residential 499
Project No: 41000207 Line Extensions - Commercial 506
Project No: 41000607 Distr. Remove & Replace 513
Project No: 41000707 Distr. System Improvements 520
Project No: 41000807 Services 527
Project No: 41001207 Pole Replacement 534
Project No: 41001307 Cable Replacement 541
Project No: 41001612 Santa Fe Bird Guard 548
Project No: 41001614 Colinas Single Phase loop Galisteo Phase 2 555
Project No: 41001615 Camel Tracks 12 to Beckner 13 Tie 562
Project No: 41001707 Santa Fe Pure Project 569
Project No: 41001711 Ft Marcy 14 A-phase at Pole Y58B104 Upgrade 576
Project No: 41001714 Halona 11 Voltage Conversion 583
Project No: 41001715 Mejia 14 Fin Del Sindero Rd Line Extension 590
Project No: 41001814 Hickox 11 Voltage Conversion 597
Project No: 41001914 Hickox 12 Voltage Conversion 604
Project No: 41001915 Mejia 14 Estrada Calabasa Line Extension 611
Project No: 41002113 Downtown Manhattan Feeder phase 1 618
Project No: 41002115 Downtown Manhattan Feeder phase 2 625
Project No: 41002213 Beckner 14 to State Pen 13 FDR tie 2013-2014 632
Project No: 41002314 Halona 14 Voltage Conversion 639
Project No: 41002315 Eldorado Single phase loop redesign phase 2 646

Project No: 41002714 Eldorado Single phase loop redesign phase 1 653
Project No: 41002814 Colinas Single Phase loop Galisteo Phase 1 660
Project No: 41003014 Paseo del tierra 667
Project No: 41003114 Eldorado to Colinas Tie 674
Project No: 41034007 Tools & Equipment 681
Project No: 50000107 Line Extension - Residential 688
Project No: 50000207 Line Extension - Commercial 695
Project No: 50000507 Lighting 702
Project No: 50000607 Distr. Remove & Replace 709
Project No: 50000707 Distr. System Improvements 716
Project No: 50000807 Services 723
Project No: 50001613 Renewable Solar 22MW-Dist Valencia 730
Project No: 50001614 Los Morros Feeder 24 737
Project No: 50001707 Belen Pure Project 744
Project No: 60001611 SW Mesa Substation 751
Project No: 60001613 Unser 14 System Improvements 758
Project No: 60001713 SF Switchgear Replacements 765
Project No: 60001714 College Substation 772
Project No: 60001813 Plateau Fiber Project Co 001 780
Project No: 60001814 La Morada Substation 787
Project No: 60002010 Misc Substation Improvements 794
Project No: 60002013 Distr Substation Grounding Repairs 801
Project No: 60002015 Distribution Capital Reallocation Project 2 808
Project No: 60002110 Misc 46kv Line 815
Project No: 60002113 46 kV Switch Replacement 822
Project No: 60002213 Distribution Breaker Replacement 829

Project No: 60002313 Emergency and Aging Equip Distr 836
Project No: 60002314 ZB 46kv retirement 843
Project No: 60002315 Zamora Substation Upgrade 850
Project No: 60002409 Corrales Bluff Unit Transformer 857
Project No: 60002413 La Mirada Land Acquisition 864
Project No: 60002608 Santo Domingo Substation & Fdrs 871
Project No: 60002613 Santo Domingo Sub Improvement 878
Project No: 60002614 PNM Facilities Sale to City of Gall 885
Project No: 60002715 12.5kV breaker replacment 892
Project No: 60002912 San Clemente Station CO1 899
Project No: 60002913 Winrock Improvements 906
Project No: 60003115 Distr Cable Testing and Replace 2015 913
Project No: 60003116 Distr Cable Testing and Replace 2016 920
Project No: 60003212 Subbstation Metering Modifications 927
Project No: 60004413 Remote Racking 934
Project No: 60005910 Substation Equipment Replacement IA 941
Project No: 60028013 Outage Communication Project 948
Project No: 60028014 DOC upgrades 955
Project No: 60028113 DOC Scada System Replace 962
Project No: 60028114 Doc Wall Monitor System Phase II 969
Project No: 60028213 Spidamin-Spidacalc Software 976
Project No: 60029905 Capital Reallocation 983
Project No: 60030013 Specialty Equip & Vehicle Co 001 990
Project No: 60030114 Fleet Retires Co1 997
Project No: 60030515 General Serice Wedge Co1 1004
Project No: 60032014 Plotter Replacement NM Ops Co1 1011

Project No: 60033313 High Resolution Display Wall ESC 1018
Project No: 60034013 Updated Mobile Comp Line Trucks 1025
Project No: 60034214 Reeves Training Center 1032
Project No: 60034913 ESC Trash Compactor 1039
Project No: 89900107 Line Extension - Residential 1046
Project No: 89900207 Line Extensions - Commercial 1053
Project No: 89900507 Lighting 1060
Project No: 89900607 Distr. Remove & Replace 1067
Project No: 89900707 Distr. system Improvements 1074
Project No: 89900807 Services 1081
Project No: 89901207 Bernalillo Pole Replacement 1088
Project No: 89901307 Bernalillo Cable Replacements 1095
Project No: 89901613 Rio Hondo Service Area Reconfiguration 1102
Project No: 89901615 Veranda Feeder 23 1109
Project No: 89901707 Bernalillo Pure Project 1116
Project No: 89901715 Westside Blvd Feeder Tie 1123
Project No: 89901815 Veranda 22 to Black Ranch 11 Feeder Tie 1130
Project No: 89901915 Veranda 22 Rainbow Blvd Upgrade 1137
Project No: 89902113 Veranda 11 to Palm 12 tie in 2013 1144
Project No: 90000207 Clayton Line Extension - Commercial 1151
Project No: 90000607 Clayton Remove and Replace 1158
Project No: 90000707 Clayton System Improvements 1165
Project No: 90000807 Clayton Transformers 1172
Project Type: 02-Transmission 1179
Project No: 64807013 Station Hardening Pilot Trans 1180
Project No: 64807113 345kV Wood Structure Replacement 1187

Project No: 64807213 Fiber Buildout OPGW ADS 1194
Project No: 64807314 West Mesa Capacitor Replacement 1201
Project No: 64807413 Trans Emergency & Aging Equip 1208
Project No: 64807414 ROW Clearing Project-LiDAR 1215
Project No: 64807513 Transmission Breaker Replacement 1222
Project No: 64807713 115kV Breaker Replace Fault Current 1229
Project No: 64807813 Rio Puerco-Progress 115 kV Line 1236
Project No: 64807913 115 kV Relay Replacement 1243
Project No: 64807916 NERC Compliance Improvements 1250
Project No: 64808013 Metro Splice Replacement 1257
Project No: 64808213 SONET System Expansion 1264
Project No: 64808413 Spread Spectrum Radio Replacement 1271
Project No: 64808513 2013 Microwave System Upgrade 1278
Project No: 64828113 Substation Remote Access 1285
Project No: 64830013 Specialty Equip and Vehicle Co 002 1292
Project No: 64830513 General Services 1299
Project No: 65006010 San Juan Vail 1306
Project No: 65006110 ANPP Transmission 1313
Project No: 65006210 SW NM Transmission 1320
Project No: 65007010 Misc. Station Improvements 1327
Project No: 65007013 345/115kV spare Transformer 1334
Project No: 65007014 El Cerro 115kV Breaker 1342
Project No: 65007016 Los Morros 1349
Project No: 65007110 Misc. Transmission 1356
Project No: 65007114 Sandoval County Landfill Relocation 1363
Project No: 65007115 EIP Purchase 40% 1370

Project No: 65007220 San Juan Shunt Reastor Circuit Breaker 1378
Project No: 65007313 Blackwater 230kV Transformer repair 1385
Project No: 65007314 La Morada Tap 1393
Project No: 65007413 Replace Blwtr 230 345kV CVTs 1400
Project No: 65007414 NERC Line Clearance 2013 1407
Project No: 65007510 Moriarty Switching Station and Shunt Capacitors 1415
Project No: 65007513 CE/AL Replacement Crossarms 1422
Project No: 65007514 Station hardening 1429
Project No: 65007616 Transmission Access Improvements 1436
Project No: 65007625 FW Reactor replacement 1443
Project No: 65007710 Station Equip Replacement IA 1450
Project No: 65007713 Trans Sub Ground Repairs 1457
Project No: 65007714 NERC Tier 3 Funding Projects 1464
Project No: 65007814 College Substation 1471
Project No: 65007914 Relay IA 1478
Project No: 65008014 TWS Upgrade 1485
Project No: 65008114 PNM Facilities Sale to City of Gall 1492
Project No: 65008211 Replace OJO 345/115 kv transformer 1500
Project No: 65008313 345kV Structure Grounding Impr 1507
Project No: 65008314 Ambrosia Capacitor Switcher 1514
Project No: 65008410 NextEra Red Mesa 1521
Project No: 65008610 Modify NH Reactor Scheme 1528
Project No: 65008715 Corrales Bluff Unit Transformer 1535
Project No: 65008807 Transmission Capital Reallocation Project 3 1542
Project No: 65008912 San Clemente Station CO2 1549
Project No: 65009012 Rio Puerco 345kV Station Expansion 1556

Project No: 65009013 Richmond Switching Station 1564
Project No: 65009014 Second 345/115 KV Transformer at Yah-Ta-Hey 1572
Project No: 65009213 Jicarilla Apache Nation Trans IA 1579
Project No: 65009214 Sandia 345/115kV Spare Transformer 1586
Project No: 65009313 Rio Puerco SVC 1593
Project No: 65009606 Blackwater Station Life Extensi 1600
Project No: 65028014 Vegtation Managment Software 1607
Project No: 65028113 eTAMIS Upgrade 1614
Project No: 65029905 Results Base Pay 1621

Project No: 72523009 PV Water Projects CBIs 1957
Project No: 72523410 PV capital structures all years all units 1964
Project Type: 10-Luna 1971
Project No: 74416015 Luna Capital Improvements 2015 1972
Project No: 74416115 Luna Capital Improvements 2016 1979
Project No: 74416811 Luna Capital Improvements 1986
Project No: 74417010 Luna GE LTSA 1993
Project Type: 11-San Juan 2000
Project No: 76076416 Reverse SJ U4 Acquisition 2001
Project No: 76076616 Reverse SJ Common Acquisition 2011
Project No: 76076716 Reverse SJ U3&4 Acquisition 2022
Project No: 76116051 SJ U1 relay protection 2030
Project No: 76116112 Unit 1 Reheat Outlet Header 2037
Project No: 76116114 U1 Boiler Shutoff Platforms - 2014 2044
Project No: 76116214 Unit 1 Reheater 2051
Project No: 76116215 Unit 1 Absorber Sieve Trays 2058

Project No: 76116317 Unit 1 Bottom Ash Controls in DCS 2065
Project No: 76116320 Unit 1 Economizer and Flame Sprays 2072
Project No: 76116328 Unit 1 Roof replacement 2079
Project No: 76116329 Unit 1 Mercury Monitoring 2086
Project No: 76116330 Unit 1 Absorber Riser Tiling 2093
Project No: 76116331 Unit 1 Platforms 2013 2100
Project No: 76116332 Unit 1 Platforms - 2014 2107
Project No: 76116334 Unit 1 Platforms - 2015 2114
Project No: 76116335 Unit 1 Platforms - 2016 2121
Project No: 76116337 Unit 1 Main transformer replacement 2128
Project No: 76116414 SJ U1 Cooling Tower Manhole Rebuild 2135
Project No: 76116415 Unit 1 Economizer CO Controls 2142
Project No: 76116512 SJ U1 Acoustic Leak Detection System Installation 2149
Project No: 76116513 Unit 1 Main & Auxiliary Transformer Relays 2156
Project No: 76116515 Unit 1 CEM Replacement 2163
Project No: 76116622 Unit 1 Turbine Trip Block 2170
Project No: 76116714 Unit 1 Generator Fluz probe testing equipment 2177
Project No: 76116715 Unit 1 Primary Air Damper Replacement 2184
Project No: 76116814 Unit 1 Dewatering bin 2191
Project No: 76116914 Unit 1 Cooling tower fan deck & hot water basin 2198
Project No: 76116915 Unit 1 Absorber PH Probe Replacement 2205
Project No: 76117114 Unit 1 pond Decant Pit & Pipe Reroute 2212
Project No: 76117214 Unit 1 Absorber Exterior wall 2219
Project No: 76117432 Unit 1 Boiler Duct O2 Grid 2226
Project No: 76117514 Unit 1 DA & Tripper Deck Roof 2233
Project No: 76117532 Unit 1 Switchyard Controls to DCS 2240

Project No: 76117614 Unit 1 Motor Control Center 1A Replacement - 2015 2247
Project No: 76117618 Unit 1 cooling tower MCC's Replacement 2254
Project No: 76117619 Unit 1 Fire Protection Alarm Check Valve 2261
Project No: 76117632 Intelligent Sootblowing in DCS 2268
Project No: 76117714 Unit 1 Coal Piping Replacement - 2015 2275
Project No: 76117715 Condenser Retube 2282

Project Type: 01-Distribution

Project No: 10000107 Line Extensions - Residential

Company: 001
Location: 100

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

Project consists of many individual customer work orders which are placed in service at various times throughout the year.

Project Need Justification

This project installing additional distribution line extensions necessary to serve new residential customers and is a requirement of the company under its obligation to provide service.

Project Alternatives

None - Mandatory

Technical Aspects

The project includes the costs of engineering, design, construction labor, and materials for the installation of overhead or underground distribution wires, poles, conduits, switches, and other ancillary equipment necessary to serve new residential customers. Customers are responsible for these costs less credits they are allowed under PNM's Rule 15 Line Extension Policy approved by the NMPRC.

Project No: 10000207 Line Extension - Commercial

Company: 001
Location: 100

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

Project consists of many individual customer work orders which are placed in service at various times throughout the year.

Project Need Justification

This project involves the installation of distribution line extensions necessary to serve new or expanding commercial customers and is a requirement of the company under its obligation to provide service.

Project Alternatives

Project is required to meet customer load obligations.

Technical Aspects

The project includes the costs of engineering, design, construction labor, and materials for the installation of overhead or underground distribution wires, poles, conduits, switches, and other ancillary equipment necessary to serve new or expanding commercial customers. Customers are responsible for these costs less credits they are allowed under PNM's Rule 15 Line Extension Policy approved by the PRC.

Project No: 10000507 Lighting

Company: 001
Location: 100

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A Page 1

List Interim In-Service Dates

Project consists of many individual customer work orders which are placed in service at various times throughout the year.

Project Need Justification

This project involves installing or removing street lighting in accordance with Rate Schedule 20.

Project Alternatives

Customers have the choice as to which entity (e.g., PNM, contractor, etc.) will install public street lighting. If the customer selects, PNM, the company is obligated to provide this service.

Technical Aspects

Install or remove street lighting poles and lighting, wiring, transformers, and ancillary lighting equipment.

Project No: 10000607 Distr. Remove & Replace

Company: 001
Location: 100

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A Page 1

List Interim In-Service Dates

Project consists of many individual work orders which are placed in service at various times throughout the year.

Project Need Justification

This project involves the removal and replacement of existing electric distribution facilities that have failed or been damaged. Generally this is the replacement of like for like equipment. The project also includes relocations of facilities in road rights-of-way for road re-alignments or widening projects. Project drivers include the need to replace failed/obsolete equipment and public improvement projects.

Project Alternatives

None

Technical Aspects

Remove and replace electric distribution facilities including the design and installation of conduit systems cable, wire, poles, and overhead and underground switches, protection equipment, and other equipment.

Project No: 10000707 System Improvements

Company: 001
Location: 100

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A Page 1

List Interim In-Service Dates

Project consists of many individual work orders which are placed in service at various times throughout the year.

Project Need Justification

This project entails upgrading existing electric distribution facilities to increase load serving capability, provide voltage support, enhance system protection, and maintain system reliability.

Project Alternatives

None - this project is necessary to ensure system reliability.

Technical Aspects

Distribution system improvements will include the design and installation of conduit systems cable, wire, poles, and overhead and underground switches, transformers, and protection equipment. This project also includes replacement of vandalized copper pole grounds with copper clad steel grounds which are less susceptible to theft. Installation of bird guarding is also included in this project to help reduce outages caused by birds and other small animals.

Project No: 10000807 Services

Company: 001
Location: 100

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A Page 1

List Interim In-Service Dates

Generally, this blanket work order is cleared quarterly; 04-15, 07-15, 10-15, 12-15

Project Need Justification

This project includes the costs of engineering, inspections, materials, and installation of service wires and equipment to provide service to residential and non-residential customers.

Project Alternatives

None - this project is required to meet customer needs.

Technical Aspects

The project includes the costs of engineering, inspections, materials, and installation of service wires and equipment for providing service to residential and non-residential customers. Please note that the Albuquerque Services Project material costs also include material costs for Sandoval, East Mountain, and the Valencia service areas.

Project No: 10000907 Transformers

Company: 001
Location: 100

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A Page 1

List Interim In-Service Dates

This blanket work order is generally cleared quarterly; 04-14, 07-14, 10-14, 12-14. Quarterly clearings occur every year thereafter.

Project Need Justification

This project includes the purchase of transformers for new customer line extensions, customer upgrades, and to replace failed transformers. The project includes labor costs for transformer installations or replacements when additional capital items are not also installed.

Project Alternatives

None - this project is necessary to replace failed equipment and meet customer needs.

Technical Aspects

Project entails purchasing transformers that necessary to reduce primary distribution voltage levels to a usable level required of residential and business customers.

Project No: 10001007 Meter Equipment

Company: 001
Location: 100

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

n/a

Project Need Justification

This project involves meter purchases for normal work (new service, maintenance, routine replacement), retirement of meters (planned and unplanned due to vintage, damage, Rule 560 requirements), and the replacement of meters (due to failure of Rule 560 sample testing)

Project Alternatives

None - these meters are necessary to meet PNM's obligation to its customers and to maintain system reliability.

Technical Aspects

Involves purchasing single and three phase solid state meters. Some of the meters will have remote communication capabilities.

Project No: 10001207 Pole Replacement

Company: 001
Location: 100

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

Project consists of many individual work orders which are placed in service at various times throughout the year.

Project Need Justification

New Mexico Public Regulatory Commission regulations state that PNM shall keep the electric infrastructure in good repair based on industry standards. This capital blanket assures that the distribution wood pole infrastructure is replaced or reinforced based on ground line testing results. It also improves safety for the field crews that climb the poles by systematically testing poles and replacing or repairing defective poles.

Project Alternatives

None - this project is necessary to ensure safety for PNM personnel.

Technical Aspects

This project includes the cost of pole replacement, pole reinforcement, and fumigation.

Project No: 10001307 Cable Replacement

Company: 001
Location: 100

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

Project consists of many individual work orders which are placed in service at various times throughout the year.

Project Need Justification

This project is for emergent replacement of bad cable. It includes the cost of engineering, material, and labor for replacing underground cables that have experienced multiple faults in a short period of time and is no longer reliable due to aging or defective cable. Cable is replaced under this project when multiple failures have occurred within defined boundaries of the cable in question. Bad cable must be repaired/replaced to reduce power outages and eliminate adverse effects on reliability.

Project Alternatives

An alternative to replacing the cable is to repair the cable by cutting out the failed section of cable and splicing in new cable in its place. This alternative is used when multiple failures have not yet occurred on sections of the cable. Another option is to inject a substance to improve the integrity of insulation materials and extend the life of the cable. This option has been used in the past but with limited success. A third option which could be used and funded under a separate specific project is to test cable to determine the integrity of the cable, only replacing those sections that are determined to have limited remaining life.

Technical Aspects

A database is maintained to track cable faults. When a threshold level of faults occurs on a section of cable, the cable is identified for replacement and replaced.

Project No: 10001614 Hawkins Feeder 22

Company: 001
Location: 100

Project Information

Construction Start Date 1/1/2014 In Service Date Completion Date 12/31/15 Page 1

List Interim In-Service Dates

NA

Project Need Justification

This project is to provide a new feeder source from the new Hawkins unit 2 substation to reconfigure the distribution primary lines in the area. Using 2013 projected loads, an outage of Hawkins Unit 1 results in an overload of Reeves 14 (116%), Wyoming 12 (114%) and Signetics 22 (106%). An outage of Reeves results in an overload of Wyoming 12 (112%), Signetics 22 (116%) and Wayne 13 (100%). The new Hawkins Feeder 22 will split the load on Reeves Feeder 14 and create a new path that can be utilized during contingencies.

Project Alternatives

This is the only viable solution. The need for Hawkins Feeder 22 was anticipated when the Hawkins Unit II transformer was installed. At that time, four-feeder switchgear was installed at Hawkins Substation in preparation for the feeders to be placed into service.

Technical Aspects

Build a new feeder from Hawkins Unit II Substation to split the present Reeves feeder 14 service area. Extend Hawkins 22 north along Jefferson using 397 AAC and riser down to connect to the existing underground line.

Project No: 10001615 Hawkins Feeder 21

Company: 001
Location: 100

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date 07/01/15 Page 1

List Interim In-Service Dates

NA

Project Need Justification

This project will provide a new feeder source, Hawkins Feeder 21, from the new Hawkins Unit 2 Substation to reconfigure the distribution primary lines in the area. An outage of Hawkins Unit 1 results in an overload of Reeves 14 (116%), Wyoming 12 (114%) and Signetics 22 (106%). An outage of Reeves results in an overload of Wyoming 12 (112%), Signetics 22 (116%) and Wayne 13 (100%). All overloads are based on 2013 projected load estimates and emergency ratings. For contingency conditions, Hawkins Feeder 11 is unable to have full load restoration with just a single supplemental for contingency conditions. The Hawkins Feeder 21 will split the load on Reeves Feeder 11 and create a new path that can be utilized during contingencies.

Project Alternatives

This is the only viable solution. The need for Hawkins Feeder 21 was anticipated when the Hawkins Unit II transformer was installed. At that time, a four-feeder switchgear was installed at Hawkins Substation in preparation for the feeders to be placed into service.

Technical Aspects

Build a new feeder from Hawkins Unit II Substation to split the present Reeves feeder 11 service area. Extend Hawkins 21 west to the drainage ditch and then north to the Reeves Switchyard using 397 AAC to connect to the existing overhead line.

Project No: 10001707 Albuquerque Pure Project

Company: 001
Location: 100

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A Page 1

List Interim In-Service Dates

Continuous throughout the year. Work orders are written by feeder.

Project Need Justification

This work was identified through the Automated Line Patrols (ALPS) process and involves repairing and replacing small capital items including arrestors, cross-arms, cut-outs, capacitors, and insulators. There is a substantial quantity of work identified from past ALPS inspections and on-going inspections. This work is necessary to maintain reliable service and safety to the public and PNM line crews. NMPRC Rule 17.9.560, Service Standards for Electric Utilities Rules, outlines requirements for following electrical and safety standards (National Electric Safety Code), minimizing interruption of service, and protective safety measures. Not performing this work may decrease reliability and increase hazards to PNM personnel and the public.

Project Alternatives

None - this project is necessary to ensure system reliability and minimize risk to PNM personnel.

Technical Aspects

Project involves the like for like replacement of aging/obsolete or damaged equipment.

List Interim In-Service Dates

NA

Project Need Justification

Involves preparing the Albuquerque 4.16kV distribution system for future operation at 12.47kV. Will entail improving the system capabilities and support of long term reliable service to Albuquerque area customers. Operating the distribution system at 12.47kV instead of 4.16kV will allow for higher load serving capacity, decrease distribution system losses, and ensure continued or improved service reliability. Provide operation flexibility to allow the transfer of feeder load to adjacent 12.47kV feeders.

Project Alternatives

A no action alternative was considered but not chosen. The Albuquerque 4.16kV system consists of three substations transformers, which provide backup service to each other in the event of an outage due to failure or maintenance. The average age of the transformers is 62 years. Load would be transferred to available adjacent transformers in the event of a transformer outage. This would place the system at risk should an additional transformer fail. Acquisition of a new transformer replacement would take upwards of 12 months. There is insufficient transformer and feeder capacity to support 100% of the load while two of the transformers are out-of-service if an additional 4.16kV transformer is forced out-of-service.

Technical Aspects

This project requires upgrading all equipment on Hazeldine Substation feeders from 4.16kV to 12.47kV operation.

Project No: 10001914 Keleher Substation and Ball Park 13 Voltage Conversion

Company: 001
Location: 100

Project Information

Construction Start Date 1/1/2014 In Service Date Completion Date 06/30/15 Page 1

List Interim In-Service Dates

NA

Project Need Justification

Prepare the Albuquerque 4.16kV distribution system for future operation at 12.47kV. Improve system capabilities and support long term reliable service to Albuquerque area customers. Operating the distribution system at 12.47kV instead of 4.16kV will allow for higher load serving capacity, decrease distribution system losses and ensure continued or improved service reliability. Provide operation flexibility to allow the transfer of feeder load to adjacent 12.47kV feeders.

Project Alternatives

A no action alternative was considered but not chosen. The Albuquerque 4.16kV system consists of 3 substations transformers, which provide backup service to each other in the event of an outage due to failure or maintenance. The average age of the transformers is 62 years. Load would be transferred to available adjacent transformers in the event of a transformer outage. This would place the system at risk should an additional transformer fail. Acquisition of a new transformer replacement would take upwards of 12 months. There is insufficient transformer and feeder capacity to support 100% of the load while 2 transformers are out-of-service if an additional 4.16kV transformer is forced out-of-service.

Technical Aspects

This project requires upgrading all equipment on Keleher Substation feeders and Ball Park feeder 13 from 4.16kV to 12.47kV operation.

Project No: 10002010 Four Hills 13 to Lawrence 14 Feeder Tie

Company: 001
Location: 100

Project Information

Construction Start Date 1/1/2014 In Service Date Completion Date 12/01/14 Page 1

List Interim In-Service Dates

NA

Project Need Justification

The purpose of this project is to establish a new feeder tie which will enable Lawrence 14 to back up Four Hills 13. Presently, the single contingency plan for Four Hills Substation transfers 100% of Four Hills 11 and 100% of Four Hills 13 to Lawrence 12 after cascading away 92% of Lawrence 12 to Lawrence 11. This new feeder tie will create a one-to-one feeder backup configuration between Four Hills 13 and Lawrence 14, and between Four Hills 11 and Lawrence 12, thus reducing the restoration time during an outage by reducing the number of switching steps to back up each feeder.his new feeder tie will also allow Four Hills 13 to serve as an alternate backup source to a portion of the East Mountain area in the event of an outage on the 46kV ID line. Presently, Lawrence 14 is the only backup source for any of the East Mountain area during an outage of the radial 46kV ID line that serves the entire East Mountain Division. The loss of the radial ID line while the Lawrence Substation was out of service for whatever reason, would result in an extended outage for the entire East Mountain Division. This feeder tie would then allow Four Hills 13 to serve as a backup source to a portion of the East Mountain area.

Project Alternatives

A no-action alternative was not an option as it could result in PNM curtailing load to maintain ANSI Range A mandates.

Technical Aspects

This project entails rebuilding a single-phase #2 ACSR line on the Lawrence 14 feeder to a three-phase 570 amp minimum normally rated line beginning 1.35 miles east of Tramway Blvd along I-40 (old U.S. Hwy 66) and continuing south for approximately 3,200 ft. Construct a new 570 amp minimum normally rated line from the south end of the first line going west approximately 1,500 ft. to its intersection with the 394 AAAC line on Four Hills 13. Install a new SCADA-Mate switch (N.O.) on this second new line.

Project No: 10002014 Ball Park 14 Voltage Conversion

Company: 001
Location: 100

Project Information

Construction Start Date 1/1/2014 In Service Date Completion Date 12/01/14 Page 1

List Interim In-Service Dates

NA

Project Need Justification

Prepare the Albuquerque 4.16kV distribution system for future operation at 12.47kV. Improve system capabilities and support long term reliable service to Albuquerque area customers. Operating the distribution system at 12.47kV instead of 4.16kV will allow for higher load serving capacity, decrease distribution system losses and ensure continued or improved service reliability. Provide operation flexibility to allow the transfer of feeder load to adjacent 12.47kV feeders.

Project Alternatives

A no action alternative was considered but not chosen. The Albuquerque 4.16kV system consists of 3 substations transformers, which provide backup service to each other in the event of an outage due to failure or maintenance. The average age of the transformers is 62 years. Load would be transferred to available adjacent transformers in the event of a transformer outage. This would place the system at risk should an additional transformer fail. Acquisition of a new transformer replacement would take upwards of 12 months. There is insufficient transformer and feeder capacity to support 100% of the load while 2 transformers are out-of-service if an additional 4.16kV transformer is forced out-of-service.

Technical Aspects

This project requires upgrading all equipment on Ball Park 14 from 4.16kV to 12,47kV operation

Project No: 10002114 Ball Park 11 Voltage Conversion

Company: 001
Location: 100

Project Information

Construction Start Date 1/1/2014 In Service Date Completion Date 12/19/14 Page 1

List Interim In-Service Dates

NA

Project Need Justification

repare the Albuquerque 4.16kV distribution system for future operation at 12.47kV. Improve system capabilities and support long term reliable service to Albuquerque area customers. Operating the distribution system at 12.47kV instead of 4.16kV will allow for higher load serving capacity, decrease distribution system losses and ensure continued or improved service reliability. Provide operation flexibility to allow the transfer of feeder load to adjacent 12.47kV feeders.

Project Alternatives

A no action alternative was considered but not chosen. The Albuquerque 4.16kV system consists of 3 substations transformers, which provide backup service to each other in the event of an outage due to failure or maintenance. The average age of the transformers is 62 years. Load would be transferred to available adjacent transformers in the event of a transformer outage. This would place the system at risk should an additional transformer fail. Acquisition of a new transformer replacement would take upwards of 12 months. There is insufficient transformer and feeder capacity to support 100% of the load while 2 transformers are out-of-service if an additional 4.16kV transformer is forced out-of-service.

Technical Aspects

This project requires upgrading all equipment on Ball Park 11 from 4.16kV to 12.47kV operation

Project No: 10002210 Bird Guard Project ABQ

Company: 001
Location: 100

Project Information

Construction Start Date 2/1/2014 In Service Date Completion Date N/A

List Interim In-Service Dates

02-12,03-12,04-12,05-12,06-12,07-12,08-12,09-12,10-12
Monthly clearings occur every year thereafter. For 2011, 2012, and 2013. Project schedule was extended to 12/31/2016.
Note the above interim in-service dates will be different, quarterly for Bird Guarding

Project Need Justification

We have identified the bird laws as a regulatory vulnerability for PNM. This project demonstrates a good faith effort to protect birds and thereby limits corporate liability for prosecution under the Migratory Bird Treaty Act (MBTA) and other bird laws. Violations of the MBTA and other "bird laws" constitute a significant liability for utilities. Additionally, over time the project will result in fewer outages and increased customer satisfaction. It will also positively affect PNM stakeholders concerned with bird and wildlife issues.

Project Alternatives

None - these improvements are necessary to comply with regulations relating to birds. The chosen method to deal with issue is the standard procedure and most cost effective consideration.

Technical Aspects

This project provides for the installation of protective covers over insulators, wires and other equipment in areas known to be inhabited/frequented by birds projected under the Migratory Bird Treaty Act to reduce the hazard of an electrocution hazard.

Project No: 10002214 Hawkins Feeder 23

Company: 001
Location: 100

Project Information

Construction Start Date 1/1/2014 In Service Date Completion Date 12/31/15 Page 1

List Interim In-Service Dates

NA

Project Need Justification

This project is to provide a new feeder source from the new Hawkins unit 2 substation to reconfigure the distribution primary lines in the area. Using 2013 projected loads, an outage of Hawkins Unit 1 results in an overload of Reeves 14 (116%), Wyoming 12 (114%) and Signetics 22 (106%). An outage of Reeves results in an overload of Wyoming 12 (112%), Signetics 22 (116%) and Wayne 13 (100%). For contingency conditions, Hawkins Feeder 11 is unable to have full restoration with just a single supplemental for contingency conditions. The new Hawkins Feeder 23 will split the load on Hawkins Feeder 11 and create a new path that can be utilized during contingencies.

Project Alternatives

This is the only viable solution. The need for Hawkins Feeder 23 was anticipated when the Hawkins Unit II transformer was installed. At that time, a four-feeder switchgear was installed at Hawkins Substation in preparation for the feeders to be placed into service.

Technical Aspects

Build a new feeder from Hawkins Unit II Substation to split the present Hawkins feeder 11 service area. Extend Hawkins 23 south along the frontage road using 397 AAC to connect to the existing overhead line.

Project No: 10002314 Albuquerque Feeder testing and repl

Company: 001
Location: 100

Project Information

Construction Start Date 1/1/2013 In Service Date Completion Date 12/31/14 Page 1

List Interim In-Service Dates

Project consists of multiple work orders with various schedules and completion dates.

Project Need Justification

This project involves the replacement of failing underground cable based upon cable testing results. Costs include engineering, project coordination, testing, material, and labor. Underground cable has a life expectancy of 30-40 years. The risk of not replacing aging and failing cable includes more frequent and extended power outages which adversely affect reliability and customer satisfaction.

Project Alternatives

One alternative to replacing cable is to repair cable by cutting out the failed section of cable and splicing new cable in its place. This alternative is used when multiple failures have not yet occurred on sections of the cable. Another option is to inject a substance to improve the integrity of insulation materials and extend the life of the cable. However, cable testing is thought to be a superior approach to targeting and replacing cable.

Technical Aspects

Cable is identified for testing based upon outage history, cable age, and cable type. The test is performed by disconnecting a cable segment from the system and applying a specialized calibrated equipment voltage to the cable. Based on partial discharge observed during testing the condition of the cable is determined to be good, in need of repair, or recommended for replacement.

Project No: 10002513 Upgrade the RCCS System

Company: 001
Location: 100

Project Information

Construction Start Date 1/16/2014 In Service Date Completion Date 12/31/14 Page 1

List Interim In-Service Dates

Project Need Justification

RCCS stands for Radio Controlled Capacitor System. All of our capacitors that are 1200 kVar and above are controlled through this system. As the system requires vars for voltage support, the program closes cap banks to meet the var need (example summer air conditioning load). During shoulder periods, Power Ops asked DOC Ops to change the Global Power Factors to support the Transmission system. It is critical to keep the system updated in order to effectively manage and operate the fleet of capacitor banks n PNM's system. The RCCS program is a very important aspect of PNM's overall system reliability.

Project Alternatives

The other potential alternative would be to not upgrade the RCCS system which would come with significant risk associated with PNM's potential inability to effectively operate the capacitor banks on the system. Outdated and/or unsupported software which could impede remote operation of the capacitor banks would cause PNM to manual dispatch crews to operate the capacitor banks, which would cause significant delays and potential low system voltage scenarios.

Project No: 10002514 Coronado Improvements

Company: 001
Location: 100

Project Information

Construction Start Date 1/1/2016 In Service Date Completion Date 12/31/16 Page 1

List Interim In-Service Dates

Project Need Justification

The electrical distribution system at the Coronado shopping center needs to be addressed due to safety concerns and non-standard equipment. Currently, three of the transformers that feed the East portion of the shopping center are fed directly off the primary backbone cable with the internal fusing as the only protection. Per our current distribution standards, these transformers should be fed from a PMH switchgear. In addition to the previous stated concern, there is existing primary cable in duct located inside the shopping center which needs to be relocated. With is current location it makes it difficult to access and can prolong any outages in the event of a cable fault.

Project Alternatives

Project alternative is to continue maintaining the system in its current configuration. This option was dismissed as a result of safety concerns raised by Operation's and line crews.

Technical Aspects

Replace the two non-standard transformers with our current transformer type, install two switchgears, and build a backbone primary loop to eventually eliminate the underground cable that runs through the shopping center.

Project No: 10030514 ESC RO Warehouse Roof Replacement

Company: 001
Location: 100

Project Information

Construction Start Date 4/1/2014 In Service Date Completion Date 08/15/14 Page 1

List Interim In-Service Dates

Project Need Justification

This project is to fund the metal roof replacement. The metal is 43+ years old and is starting to deteriorate. Replacement is recommended to avoid any further deterioration of the building.

Project Alternatives

The alternative is to continue to path and repair the current roof.

Technical Aspects

The metal building roof will be replaced. The new roof will be warrantied.

Project No: 10030610 Communications Equipment Capital Budget

Company: 001
Location: 100

Project Information

Construction Start Date 1/1/2012 In Service Date Completion Date N/A Page 1

List Interim In-Service Dates

multiple monthly clearings

Project Need Justification

This project provides discretionary funds for the Communications Supervisor to replace or upgrade ageing or obsolete Communications Equipment on PNM's electric distribution system. These projects are typically small projects that would require little or no engineering support. Some examples would be replacing or upgrading SCADA (Supervisory Control And Data Acquisition) Remote Terminal Units or radios, upgrading SCADA switch controllers and related equipment.

Project Alternatives

The alternative to providing discretionary funding for Supervisory management of small projects would be to have all system equipment upgrades and replacement of obsolete equipment, regardless of scope, go through the same process for all of the capital projects, which would dramatically reduce the ability to address critical upgrades and replacement of failed or obsolete communication equipment.

Technical Aspects

The technical aspects of this project involve subject matter expert (supervisor) identifying critical communications equipment in the southern part of the state that is in need of replacement or upgrade to obsolescence, ordering the material and coordinating work to accomplish the upgrade or repair of the component. Equipment that this project might cover would include 800mHz radio system components, SCADA Communications equipment, and microwave repeater radios and related equipment. The funds on this project would be used to cover both material costs as well as labor costs associated with the work needed to upgrade, or replace communications equipment.

Project No: 10030814 Line Dept HVAC Replacement

Company: 001
Location: 100

Project Information

Construction Start Date 6/9/2014 In Service Date Completion Date 08/30/14 Page 1

List Interim In-Service Dates

Project Need Justification

This project will replace the current obsolete and inefficient HVAC system in the Edith Service Center Line Department building. The current unit does not adequately control the working climate and maintain a comfortable work environment.

Project Alternatives

The alternative is to continue with the current unreliable unit and perform breakdown maintenance as it occurs. If this occurs during warmer months, productivity will be severely impacted.

Technical Aspects

A new HVAC unit will be installed on the roof of the Line Department building.

Project No: 10032014 Ice Machine ESC Tool Room

Company: 001
Location: 100

Project Information

Construction Start Date 6/20/2014 In Service Date Completion Date 09/30/14 Page 1

List Interim In-Service Dates

Project Need Justification

The old ice machine at ESC was in very poor condition. It is necessary for crews to have ice readily available on trucks especially during warmer weather to keep water and drinks cold, and to use to cool down towels in hot weather.

Project Alternatives

The other alternative would be to have ice delivered to the service center on a daily basis. This option would be much more costly and logistically difficult.

Technical Aspects

Purchase and install new ice machine.

Project No: 10032114 Desk for Veg Management

Company: 001
Location: 650

Project Information

Construction Start Date 6/16/2014 In Service Date Completion Date 07/10/14 Page 1

List Interim In-Service Dates

Project Need Justification

Purchased a P Top desk unit for the Vegetation Management Department, which is needed due to the restructuring of workspace from four small work stations to one office cube. Department personnel restructuring has taken place over the last 5 years, as well as a change in job responsibilities for David Stricker, which has necessitated this project.

Project Alternatives

The current office furniture is Techline, which has a limited use in service center. Much of the existing office furniture was reused after the remodel of this office. For this reason, this new desk must be purchased through Techline to be compatible with the rest of the current office furniture.

Technical Aspects

There are no technical aspect related to the purchase, delivery, and assembly of this desk.

Project No: 10032214 DOC Ops Upgrades

Company: 001
Location: 100

Project Information

Construction Start Date 10/22/2013 In Service Date Completion Date 10/31/14 Page 1

List Interim In-Service Dates

Project Need Justification

DOC Operations was sorely in need of an upgrade as was evidenced during our large storm of July 2012. The desks were worn and obsolete, the walls were covered with paper wall maps with hand written magnetic tags for switching and clearance information and our software for SCADA and TMS were several revisions behind. The Trouble Crew and Dispatch areas were cramped and obsolete. There wasn't enough room for crews to stage work and the noise was distracting to the Dispatchers trying to decipher work needing to be done.

Project Alternatives

The alternative was trying to work with old out of date furnishings, old wall map system, less than adequate communications between DOC Operators and Dispatchers (Dispatchers were relocated next to DOC Operators for better communications between the groups) and less than adequate staging areas for the Troublemen and Line Department supervisors.

Technical Aspects

Installation included the new consoles, chairs, flooring, monitors, hardware, break room, Dispatch Relocation, and new furniture for Dispatchers. A New DOC Media Conference. Room including new conference room table, new chairs, new Aquous live conference system and two new television monitors for monitoring news station and weather There was an upgrade of DOC Supervisor office including new screens for TMS and SCADA monitoring, and upgrade of Troublemen staging areas was started.

Project No: 10034007 ABQ Metro Tools & Equipment

Company: 001
Location: 100

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A Page 1

List Interim In-Service Dates

Quarterly clearings occur every year. 03-15,06-15,09-15,12-15

Project Need Justification

Tools are used to maintain substation equipment, and distribution line equipment. Tools consist of but are not limited to; magnetic drill press, hydraulic paving breaker, streamline robo crimp, cordless phasing sets, cable cutter, etc.

Project Alternatives

This blanket IA will have multiple work orders each representing small capital tool replacements.

Technical Aspects

Technical aspects will be reviewed at the work order level since this is a blanket IA.

Project No: 10034012 Tech Serv Distr Tools

Company: 001
Location: 100

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

Quarterly clearings occur every year. 03-15,06-15,09-15,12-15

Project Need Justification

New tools are used to maintain substation equipment and distribution line equipment. The new tools will replace those that have been damaged or are at the end of their useful life.

Project Alternatives

This is a Blanket Improvement Authorization will have multiple work orders each representing small capital tool replacements. Specific project alternatives will be evaluated at the work order level.

Technical Aspects

Technical aspects will be reviewed at the work order level since this is a Blanket Improvement Authorization.

Project No: 14000107 Line Extensions - Residential

Company: 001
Location: 140

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

Project consists of many individual customer work orders which are placed in service at various times throughout the year.

Project Need Justification

This project provides for distribution line extensions necessary to serve new residential customers and is a requirement of the company under its obligation to provide service.

Project Alternatives

None - Mandatory

Technical Aspects

The project includes the costs of engineering, design, construction labor, and materials for the installation of overhead or underground distribution wires, poles, conduits, switches, and other ancillary equipment necessary to serve new residential customers. Customers are responsible for these costs less credits they are allowed under PNM's Rule 15 Line Extension Policy approved by the PRC.

Project No: 14000207 Line Extensions - Commercial

Company: 001
Location: 140

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

Project consists of many individual customer work orders which are placed in service at various times throughout the year.

Project Need Justification

This project provides for distribution line extensions necessary to serve new or expanding commercial customers and is a requirement of the company under its obligation to provide service and in accordance with PNM Rules & Regulations.

Project Alternatives

Line extensions are a requirement under PNM's obligation to serve and therefore there are no project alternatives.

Technical Aspects

The project includes the costs of engineering, design, construction labor, and materials for the installation of overhead or underground distribution wires, poles, conduits, switches, and other ancillary equipment necessary to serve new or expanding commercial customers. Customers are responsible for these costs less credits they are allowed under PNM's Rule 15 Line Extension Policy approved by the PRC.

Project No: 14000607 Distr. Remove & Replace

Company: 001
Location: 140

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

Project consists of many individual work orders which are placed in service at various times throughout the year.

Project Need Justification

This project includes removal and replacement of existing electric distribution facilities that have failed or been damaged. Generally this is replacement of like for like. The project also includes relocations of facilities in road rights of way for road re-alignments or widening projects. Project drivers include equipment failure and public improvement projects.

Project Alternatives

Any project alternatives must be evaluated on a case-by-case basis, but generally, there are no alternatives as this is to be used to replace existing facilities that were in service and their operation is needed.

Technical Aspects

Remove and replacement of electric distribution facilities include the design and installation of conduit systems cable, wire, poles, and overhead and underground switches, protection equipment, and other equipment.

Project No: 14000707 Distr. System Improvements

Company: 001
Location: 140

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

Project consists of many individual work orders which are placed in service at various times throughout the year.

Project Need Justification

This project upgrades existing electric distribution facilities to increase load serving capability, provide voltage support, enhance system protection, and maintain system reliability.

Project Alternatives

Project alternatives must be evaluated for each upgrade.

Technical Aspects

Distribution system improvements include the design and installation of conduit systems cable, wire, poles, and overhead and underground switches, transformers, and protection equipment. This project also includes replacement of vandalized copper pole grounds with copper clad steel grounds which are less susceptible to theft. Installation of bird guarding is also included in this project to help reduce outages caused by birds and other small animals.

Project No: 14000807 Services

Company: 001
Location: 140

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

Generally, this blanket work order is cleared quarterly; 04-15, 07-15,10-15,12-15

Project Need Justification

This project includes the costs of engineering, inspections, and installation of service wires and equipment to provide service to residential and non-residential customers.

Project Alternatives

None - this project is required to provide services to new customers, which PNM is required to do.

Technical Aspects

The project includes the costs of engineering, inspections, and installation of service wires and equipment for providing service to residential and non-residential customers. Note: materials used for this location are included with the Albuquerque Services Project.

Project No: 14001612 Tijeras 11 4/0 ACSR to 397 AAC

Company: 001
Location: 140

Project Information

Construction Start Date 1/1/2014 In Service Date Completion Date 12/01/14 Page 1

List Interim In-Service Dates

NA

Project Need Justification

Projected load growth in the East Mountain area will cause the existing 2/0ACSR from pole M16C174 to pole M16D008 to exceed its emergency rating when load is transferred to Tijeras 11 for a Zamora Substation outage. Presently Tijeras 11 provides 55% load back up for a Zamora 12 outage. This project will mitigate the overloading problem on this section of feeder tie for a time period extending beyond the ten year planning horizon.

Project Alternatives

A no-action alternative was not an option as it could result in PNM curtailing load to maintain ANSI Range A mandates.

Technical Aspects

This project requires replacing approximately 2,400 feet of an existing three-phase 4/0ACSR circuit with 397AAC conductor design along Highway 66 from the Tijeras 11 getaway on pole M17A043 to pole M16C174 near North Highway 14 on the Tijeras 11 feeder.

Project No: 14001614 Zamora 12 SCADA controlled V Reg

Company: 001
Location: 140

Project Information

Construction Start Date 1/1/2014 In Service Date Completion Date 12/01/14 Page 1

List Interim In-Service Dates

NA

Project Need Justification

Projected load growth in the area served by the Zamora 12 feeder will cause the voltage to fall below ANSI Range A criteria in many locations during peak load conditions while in the normal configuration. Three-phasing and phase-balancing projects, as well as additional use of capacitor banks, will have some effect on reducing voltage drop problems; however, the voltage drop on this very long feeder has reached the point that a voltage regulator is needed to correct low voltages on the feeder.

Project Alternatives

A no-action alternative was not an option as it could result in PNM curtailing load to maintain ANSI Range A mandates.

Technical Aspects

This project requires installing a 501 kVA three-phase rated, bi-directional, SCADA-controlled voltage regulator bank (Ref. DS-8-14.0) on Zamora 12 Feeder, west of the intersection of Highway 66 and Via Sedillo Rd between pole P16A042 and pole P16A043.

Project No: 14001615 San Antonito 12 Reconductor

Company: 001
Location: 140

Project Information

Construction Start Date 1/1/2014 In Service Date Completion Date 12/01/14 Page 1

List Interim In-Service Dates

NA

Project Need Justification

Projected load growth in the area served by the San Antonito 12 feeder will cause the existing 4/0ACSR conductor on San Antonito 12 to exceed its normal rating during peak loading conditions while in normal configuration.

Project Alternatives

A no-action alternative was not an option as it could result in PNM curtailing load to maintain ANSI Range A mandates.

Technical Aspects

This project consists of the following items:

•Reconductor approximately 900 feet of three-phase 4/0ACSR with a three-phase 397AAC overhead conductor design and 570Amp rating from the San Antonito 12 getaway, switch SW1461E, southeast to North Highway 14 to pole N13A029

•Reconductor approximately 15,800 feet of three-phase 4/0ACSR with a three-phase 397AAC overhead conductor design and 570Amp rating from North Highway 14 at pole N12D003, approximately 1900 feet northeast of La Madera Road, then west to pole M11B024

Project No: 14001707 Abq East Mtn Pure Project

Company: 001
Location: 140

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

Continuous throughout the year. Work orders are written by feeder.

Project Need Justification

This work is identified through the Automated Line Patrols (ALPS) for repair and replacement of small capital items including; arrestors, cross-arms, cut-outs, capacitors, and insulators. There is a substantial quantity of work identified from past ALPS inspections and on-going inspections. This is work is necessary to maintain reliable service and safety to the public and PNM line crews. NMPRC Rule 17.9.560, Service Standards for Electric Utilities Rules, outlines requirements for following electrical and safety standards (NESC), minimizing interruption of service, and protective safety measures. Not performing this work may decrease reliability and increase hazards to PNM personnel and the public.

Project Alternatives

Alternative must be evaluated specific to each replacement.

Technical Aspects

Primarily like for like replacement of aging or damaged equipment.

Project No: 14001714 11 and Zamora 11 2/0 ACSR to 397 AAC

Company: 001
Location: 140

Project Information

Construction Start Date 1/1/2014 In Service Date Completion Date 12/01/14 Page 1

List Interim In-Service Dates

NA

Project Need Justification

Projected load growth in the East Mountain area will cause the existing 2/0ACSR from pole M16C174 to pole M16D008 to exceed its emergency rating when load is transferred to Tijeras 11 for a Zamora Substation outage. Presently Tijeras 11 provides 55% load back up for a Zamora 12 outage. This project will mitigate the overloading problem on this section of feeder tie for a time period extending beyond the ten year planning horizon.

Project Alternatives

A take no-action alternative is not an option as it could result in PNM curtailing load to maintain ANSI Range A mandates.

Technical Aspects

This project requires replacing approximately 4,400 feet of existing three-phase 2/0ACSR circuit with 397AAC conductor and implementing any modifications to maintain a 570 Amp rating along Highway 66 from N. Highway 14 to Cresenciano Rd on the Tijeras 11 Feeder.

Project No: 14001814 Sedillo Rd 3-Phase Rebuild

Company: 001
Location: 140

Project Information

Construction Start Date 1/1/2014 In Service Date Completion Date 12/01/14 Page 1

List Interim In-Service Dates

NA

Project Need Justification

This existing single-phase lateral currently serves approximately 1,465 kVA of connected load and is winter peaking. The load in the area served by this single-phase lateral has grown significantly over the past several years. As load has increased, this single-phase lateral has been extended multiple times creating feeder phase imbalance issues and low voltages in the area, as well as greater exposure to power outages for existing customers to single-phase line-to-ground faults. This 3-phasing and phase-balancing project will allow for the more even distribution of load along the feeder, thereby improving the voltage along the length of the feeder. It will also reduce exposure to power outages for a larger number of customers to single-phase line-to-ground faults.

Project Alternatives

A no-action alternative was not an option as it could result in PNM curtailing load to maintain ANSI Range A mandates.

Technical Aspects

This project requires rebuilding approximately 5,800 feet of single-phase #4ACSR and #2ACSR with three-phase 2/0ACSR west along Sedillo Road from Highway 217 on the Zamora 12 feeder from pole Q16C135 to pole P1D017.

Project No: 14001914 Open Meadow Drive 3-Phase Rebuild

Company: 001
Location: 140

Project Information

Construction Start Date 1/1/2014 In Service Date Completion Date 12/31/14 Page 1

List Interim In-Service Dates

NA

Project Need Justification

There are three large adjacent single-phase laterals that currently serve a total of approximately 2,125 kVA of connected load. The load in the area served by these single- phase laterals has grown significantly over the past several years. As load has increased, these single-phase laterals have been extended multiple times creating feeder phase imbalance issues and low voltages in the area, as well as greater exposure to power outages for existing customers to single-phase line-to-ground fault. This 3-phasing and phase-balancing project will allow for the more even distribution of load along the feeder, thereby improving the phase balance (both voltage and current) along the length of the feeder. It will also reduce exposure to power outages for a larger number of customers to single-phase line-to-ground faults.

Project Alternatives

A no-action alternative was not an option as it could result in PNM curtailing load to maintain ANSI Range A mandates.

Technical Aspects

This project requires replacing approximately 8,500 feet of single-phase #2ACSR with a three-phase 2/0ACSR design south from pole P22A037 just east of the intersection of Open Meadow Drive and S. Highway 14 at on the Tijeras 12 feeder.

Project No: 14002014 San Antonito 12 to San Antonito 22 Feeder Tie

Company: 001
Location: 140

Project Information

Construction Start Date 1/1/2014 In Service Date Completion Date 06/30/15

List Interim In-Service Dates

NA

Project Need Justification

The existing single-phase La Madera lateral on San Antonito 12 presently serves approximately 2,290 kVA of connected load. This large single-phase lateral causes a significant phase imbalance on the San Antonito 12 feeder. It also represents a large exposure to power outages for existing customers to single-phase line-to-ground faults. A three-phase overhead backbone through this area will allow this lateral to be split up and balanced, resulting in a better phase balance on the feeder, as well as improving the voltage profile and reducing outage exposure for a larger number of customers. Constructing this backbone develops a feeder tie between San Antonito 12 and San Antonito 22. This feeder tie will also serve as an alternate source for the Sandia Crest load in the event of an outage due to downed lines on the lower half of the San Antonito 12 feeder. This will increase the reliability of service to the sensitive Sandia Crest load.

Project Alternatives

A no-action alternative was not an option as it could result in PNM curtailing load to maintain ANSI Range A mandates.

Technical Aspects

This project requires replacing approximately 20,100 feet of single-phase #4ACSR and #2ACSR with a three-phase 397AAC 570 Amp rated conductor design, including phase balancing starting at pole M11A007 in the La Madera area on the San Antonito 12 feeder, north to pole N09A001 at the northern tip of San Pedro Creek Estates of the single-phase underground of San Antonito 22 feeder. To complete the feeder tie, this project requires installing 4500 feet of a new three phase 397AAC 570 Amp rated overhead line and a new GOLB open point switch at pole N09A001. This new overhead line will begin at Pole N09A001 and end at switch SW1499E within San Pedro Estates.

Project No: 14002114 Dressage Drive 3-Phase

Company: 001
Location: 140

Project Information

Construction Start Date 1/1/2014 In Service Date Completion Date 12/01/14 Page 1

List Interim In-Service Dates

NA

Project Need Justification

This existing single-phase lateral currently serves approximately 1,080 kVA of connected load and is winter peaking. The load in the area served by this single-phase lateral has grown significantly over the past several years. As load has increased, this single-phase lateral has been extended multiple times resulting in phase imbalance on the feeder and low voltages in the area, as well as greater exposure to power outages for existing customers to single-phase line-to-ground faults. This 3-phasing and phase-balancing project will allow for the more even distribution of load along the feeder, thereby improving voltage along the length of the feeder. It will also reduce exposure to power outages for a larger number of customers to single-phase line-to-ground faults.

Project Alternatives

A no-action alternative was not an option as it could result in PNM curtailing load to maintain ANSI Range A mandates.

Technical Aspects

This project requires replacing approximately 2,800 feet of single-phase #2ACSR with a three-phase 2/0 ACSR design south from the intersection of Dressage Drive and Highway 66 from pole P16B042 to pole P16D007 on the Zamora 12 Feeder.

Project No: 20000107 Line Extension - Residential

Company: 001
Location: 200

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

01-15,02-15,03-15,04-15,05-15,06-15,07-15,08-15,09-15,10-15,11-15,12-15. Monthly clearings occur every year thereafter.

Project Need Justification

This Blanket project includes capital expenditures for the purpose of providing service to new and increased residential customer loads.

Project Alternatives

None - Mandatory

Technical Aspects

Build new overhead or underground distribution to serve new residential customers.

Project No: 20000207 Line Extensions - Commercial

Company: 001
Location: 200

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

01-15,02-15,03-15,04-15,05-15,06-15,07-15,08-15,09-15,10-15,11-15,12-15. Monthly clearings occur every year thereafter.

Project Need Justification

This Blanket project includes capital expenditures for the purpose of providing service to new and increased commercial customer loads.

Project Alternatives

None - Mandatory

Technical Aspects

Line extensions include the design and installation of electric distribution facilities to include: conduit systems cable, wire, poles, OH/UG switches, transformers, protection equipment, and metering.

Project No: 20000507 Lighting

Company: 001
Location: 200

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

01-15,02-15,03-15,04-15,05-15,06-15,07-15,08-15,09-15,10-15,11-15,12-15. Monthly clearings occur every year thereafter.

Project Need Justification

This Blanket project includes capital expenditures for the installation and removal of City Street Lights.

Project Alternatives

None - Mandatory

Technical Aspects

Project No: 20000607 Distr. Remove & Replace

Company: 001
Location: 200

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

01-15,02-15,03-15,04-15,05-15,06-15,07-15,08-15,09-15,10-15,11-15,12-15. Monthly clearings occur every year thereafter.

Project Need Justification

Project is necessary to support remove, replace and relocation of electric distribution facilities that are customer driven that may or may not be paid for by the customer.

Project Alternatives

None - Mandatory

Technical Aspects

Remove and replacement of electric distribution facilities include the design and installation of conduit systems cable, wire, poles, OH/UG switches, transformers, protection equipment, and metering.

Project No: 20000707 Distr. System Improvements

Company: 001
Location: 200

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

01-15,02-15,03-15,04-15,05-15,06-15,07-15,08-15,09-15,10-15,11-15,12-15. Monthly clearings occur every year thereafter.

Project Need Justification

This Blanket project includes capital expenditures necessary to maintain adequate service levels and system operation.

Project Alternatives

None - Mandatory

Project No: 20000807 Services

Company: 001
Location: 200

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A Page 1

List Interim In-Service Dates

04-2015, 07-2015, 10-2015, 12-2015. Quarterly clearings occur every year thereafter.

Project Need Justification

This blanket project includes capital expenditures necessary to support residential, commercial, and industrial services.

Project Alternatives

There are no alternatives as this project must be completed to reach new customers.

Technical Aspects

Covers the installation of service wires and equipment for providing service to residential and commercial customers.

Project No: 20001207 Pole Replacements

Company: 001
Location: 200

Project Information

Construction Start Date 2/1/2016 In Service Date Completion Date N/A

List Interim In-Service Dates

02-16,03-16,04-16,05-16,06-16,07-16,08-16,09-16,10-16,11-16,12-16Monthly clearings occur every year thereafter.
Note the above interim in-service dates will be different, quarterly for pole replacement.

Project Need Justification

PRC regulations state that PNM shall keep the electric infrastructure in good repair based on industry standards. This capital blanket assures that the distribution pole intrastate is replaced or reinforced based on ground line testing results. It also improves safety for the field crews that climb the poles by systematically testing poles and replacing or repairing defective poles.

Project Alternatives

There are no alternatives to replacing damaged or aging poles other than replacing them with newer poles.

Technical Aspects

Poles will be tested and replaced as needed.

Project No: 20001707 Deming Pure Project

Company: 001
Location: 200

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

Project Need Justification

This work is identified through Line Patrols for repair and replacement of small capital items including: arrestors, cross-arms, cut-outs, capacitors, and insulators. This is work is necessary to maintain reliable service and safety to the public and PNM line crews. NMPRC Rule 17.9.560, Service Standards for Electric Utilities Rules, outlines requirements for following electrical and safety standards (NESC), minimizing interruption of service, and protective safety measures.

Project Alternatives

Project alternatives will be considered for each repair, but most repairs will be repairing damaged equipment. Not performing this work may decrease reliability and increase hazards to PNM personnel and the public.

Technical Aspects

Primarily like for like replacement of aging or damaged equipment.

Project No: 20001711 Deming Capital Bird Guard Project

Company: 001
Location: 200

Project Information

Construction Start Date 3/1/2016 In Service Date Completion Date N/A

List Interim In-Service Dates

Completion 12/1/2016
Note the above interim in-service dates will be different, quarterly for Bird Guarding

Project Need Justification

We have identified the bird laws as a regulatory vulnerability for PNM. This project demonstrates a good faith effort to protect birds and thereby limits corporate liability for prosecution under the Migratory Bird Treaty Act (MBTA) and other bird laws. The different projects for installation of Bird Guarding on PNM distribution lines are identified from outage reports requiring remedial action of bird guarding, known areas to be inhabited and frequented by protected birds having PNM distribution lines in the areas.

Project Alternatives

There are no alternatives to these projects as it is required to comply with regulations. The chosen methods are standard and proven to be the most cost effective.

Technical Aspects

The different projects identified provide for the installation of protective covers over insulators, wires, transformer bushings, switch covers and other equipment in areas known to be inhabited/frequented by birds projected under the Migratory Bird Treaty Act to reduce the hazard of an electrocution hazard.

Project No: 20001713 Gold 12 Deming West 13

Company: 001
Location: 200

Project Information

Construction Start Date 6/1/2014 In Service Date Completion Date 02/10/15 Page 1

List Interim In-Service Dates

Upon completion of project 12/30/2014

Project Need Justification

With reduced clearance between circuits Gold12 and Deming West 13 on Static Built Double Circuit construction, they are no longer meeting PNM standards and this has created safety, maintenance, and reliability issues.

Project Alternatives

A do nothing alternative was considered but this poses significant risk and reliability issues.

Technical Aspects

Rebuild existing double circuit distribution line with new cross arms raising circuit Gold 12 for clearance from Deming West 13 and install arrestor stations on every fourth pole.

Project No: 20001813 Deming Distribution Transformers

Company: 001
Location: 200

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date 12/31/2015 Page 1

List Interim In-Service Dates

04-2015, 07-2015, 10-2015, 12-2015.

Project Need Justification

Replace delta connected 14.4KV distribution transformers on portions of the Deming Distribution System with 13.8 Wye connected transformers. The original Deming distribution system was configured with a 14.4 KV three wire system. All transformers were connected in a line to line configuration. In the 1970's PNM pulled in a fourth conductor as a system neutral, constructed a grounding bank at Deming station and began to operate the distribution as a 13.8 Grounded wye system. With the loss of one phase conductor the delta connected primary transformers provide a source of high voltage backfeed through the transformer primary windings to the isolated section of line. This results in approximately 75% of normal line voltage on split phase transformers and a backfeed on the conductor. Reconfiguring the system to grounded wye would permit the laterals to be fused more effectively there by reducing the area affected by equipment outages and reducing area to patrol on outages.

Project Alternatives

Continue to operate the Deming distribution system as a hybrid delta and wye system, which poses many outage threats.

Technical Aspects

Replace 200 Delta connected 14.4KV Distribution transformers with 13.8KV Wye connected Distribution transformers. Single phase Transformers to replace will vary in size between 25KVA to 75KVA.

Project No: 20034009 Deming Tools & Equipment

Company: 001
Location: 200

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A Page 1

List Interim In-Service Dates

04-2015, 07-2015, 10-2015, 12-2015. Quarterly clearings occur every year thereafter.

Project Need Justification

This Blanket project is for the purchase of tools and other work equipment required for the building and maintaining power lines, both distribution and transmission lines.

Project Alternatives

None

Technical Aspects

This Blanket Improvement Authorization will have multiple work orders with each representing small capital tool replacements such as power tools, specialized tools for working energized power lines and for equipment accessories required for the installation of distribution equipment.

Project No: 30000107 LV-Line Extensions - Residential

Company: 001
Location: 300

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

Project Need Justification

This is a line extension for new residential customers. This project is required to meet the demand and provide service to new customers.

Project Alternatives

There are no alternatives as this project must be completed to reach new customers.

Technical Aspects

Installing infrastructure to meet new residential customer needs

Cost Year 00

Project No: 30000207 Line Extension - Commercial

Company: 001
Location: 300

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

Project Need Justification

This blanket project is to reach new commercial customers with line extensions.

Project Alternatives

There are no alternatives as this project must be completed to provide service to new commercial customers.

Technical Aspects

Installation of new equipment to energize new commercial customers.

Project No: 30000607 Distr. Remove & Replace

Company: 001
Location: 300

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

Project Need Justification

This project is to reserve funds to use for relocating infrastructure in County, City, State or Federal rights of way as well as faulted equipment. These projects will be addressed as they arise.

Project Alternatives

Project alternatives will be evaluated on the work order level.

Technical Aspects

Remove or relocate existing equipment.

Project No: 30000707 Distr. system Improvements

Company: 001
Location: 300

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

Project Need Justification

System improvement projects to improve the reliability and keep SAIDI and CAIDI numbers down

Project Alternatives

No alternatives

Technical Aspects

Install new infrastructure to increase reliability

Cost Year 00

Project 30000707 Year 2014

Project No: 30000807 Services

Company: 001
Location: 300

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A Page 1

List Interim In-Service Dates

Generally, this blanket work order is cleared quarterly; 04-15,07-15,10-15,12-15

Project Need Justification

This is new customer services. This project includes the costs of engineering, inspections, materials, and installation of service wires and equipment to provide service to residential and non-residential customers.

Project Alternatives

None - this project is required to meet customer needs.

Technical Aspects

The project includes the costs of engineering, inspections, materials, and installation of service wires and equipment for providing service to residential and non-residential customers. Please note that the Albuquerque Services Project material costs also include material costs for Sandoval, East Mountain, and the Valencia service areas.

Project No: 30001207 Pole Replacement

Company: 001
Location: 300

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A Page 1

List Interim In-Service Dates

Project consists of many individual work orders which are placed in service at various times throughout the year.

Project Need Justification

New Mexico Public Regulatory Commission regulations state that PNM shall keep the electric infrastructure in good repair based on industry standards. This capital blanket assures that the distribution wood pole infrastructure is replaced or reinforced based on ground line testing results. It also improves safety for the field crews that climb the poles by systematically testing poles and replacing or repairing defective poles.

Project Alternatives

None - this project is necessary to ensure safety for PNM personnel.

Technical Aspects

This project includes the cost of pole replacement, pole reinforcement, and fumigation.

Project No: 30001307 Las Vegas Cable Replacements

Company: 001
Location: 300

Project Information

Construction Start Date | In Service Date | Completion Date N/A | Page 1

List Interim In-Service Dates

Project consists of many individual work orders which are placed in service at various times throughout the year.

Project Need Justification

This project is for emergent replacement of bad cable. It includes the cost of engineering, material, and labor for replacing underground cables that have experienced multiple faults in a short period of time and is no longer reliable due to aging or defective cable. Cable is replaced under this project when multiple failures have occurred within defined boundaries of the cable in question. Bad cable must be repaired/replaced to reduce power outages and eliminate adverse effects on reliability.

Project Alternatives

An alternative to replacing the cable is to repair the cable by cutting out the failed section of cable and splicing in new cable in its place. This alternative is used when multiple failures have not yet occurred on sections of the cable. Another option is to inject a substance to improve the integrity of insulation materials and extend the life of the cable. This option has been used in the past but with limited success. A third option which could be used and funded under a separate specific project is to test cable to determine the integrity of the cable, only replacing those sections that are determined to have limited remaining life.

Technical Aspects

A database is maintained to track cable faults. When a threshold level of faults occurs on a section of cable, the cable is identified for replacement and replaced.

Project No: 30001707 Las Vegas Pure Project

Company: 001
Location: 300

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

Continuous throughout the year. Work orders are written by feeder.

Project Need Justification

This work was identified through the Automated Line Patrols (ALPS) process and involves repairing and replacing small capital items including arrestors, cross-arms, cut-outs, capacitors, and insulators. There is a substantial quantity of work identified from past ALPS inspections and on-going inspections. This work is necessary to maintain reliable service and safety to the public and PNM line crews. NMPRC Rule 17.9.560, Service Standards for Electric Utilities Rules, outlines requirements for following electrical and safety standards (National Electric Safety Code), minimizing interruption of service, and protective safety measures. Not performing this work may decrease reliability and increase hazards to PNM personnel and the public.

Project Alternatives

None - this project is necessary to ensure system reliability and minimize risk to PNM personnel.

Technical Aspects

Project involves the like for like replacement of aging/obsolete or damaged equipment.

Project No: 30034007 Tools & Equipment

Company: 001
Location: 300

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

N/A

Project Need Justification

Capital Tools required to perform essential tasks in a safe and efficient manner.

Project Alternatives

Continue to work with old inefficient tools. Use new tools to create efficiencies and prevent injuries.

Technical Aspects

Tools required to install and remove electrical distribution line components.

Project No: 41000107 Line Extensions - Residential

Company: 001
Location: 410

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

Project Need Justification

These are new residential line extensions. These are customer driven and must be completed to provide service to new customers.

Project Alternatives

There are no alternatives. The risks associated with not funding 00107's are increased customer dis-satisfaction and increased PRC complaints.

Technical Aspects

Residential line extensions.

Project No: 41000207 Line Extensions - Commercial

Company: 001
Location: 410

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

Project Need Justification

These are the commercial line extensions. These are customer driven projects and must be completed to provide service to new customers.

Project Alternatives

There are no alternatives. Risks associated with not funding these is increased customer di-satisfaction and increased PRC complaints

Technical Aspects

The installation of commercial lines.

Project No: 41000607 Distr. Remove & Replace

Company: 001
Location: 410

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A Page 1

List Interim In-Service Dates

Project Need Justification

This project is for removal or relocation of PNM facilities due to encumbrance of County, City, State, or Federal rights of way. Also to replace faulted PNM equipment.

Project Alternatives

There are not alternatives in that the facilities must be relocated / removed and equipment replacement must happen for operational functionality.

Technical Aspects

Remove or relocate existing PNM facilities.

Project No: 41000707 Distr. System Improvements

Company: 001
Location: 410

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

Project Need Justification

This is the system improvement project. This is to maintain reliability and keep SAIDI and CAIDI numbers down. The need for this project is to continue to imporve upon PNM's existing system. We look to this project to increase system capacities, fix ongoing reliabilty issues and bring system up to date and code.

Project Alternatives

No alternatives. If we do not improve on our system and do not address reliability for our customer base, this would lead to poor quality of service and overall reduction in system performance.

Technical Aspects

Increase and/or improve system capacity. This project allows us to perform system wide reconductors, create looped distribution circuit, reduce flicker and voltage drop issues. It allows us to install system protection, reducing the amount of customers affected by an outage.

Project No: 41000807 Services

Company: 001
Location: 410

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

Project Need Justification

This is customer services project. Necessary to energize up and service new customers.

Project Alternatives

There are no alternatives in that this is necessary to provide service to new customers.

Technical Aspects

Installation of new service conductors to energize new customers.

Project No: 41001207 Pole Replacement

Company: 001
Location: 410

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

Project consists of many individual work orders which are placed in service at various times throughout the year.

Project Need Justification

New Mexico Public Regulatory Commission regulations state that PNM shall keep the electric infrastructure in good repair based on industry standards. This capital blanket assures that the distribution wood pole infrastructure is replaced or reinforced based on ground line testing results. It also improves safety for the field crews that climb the poles by systematically testing poles and replacing or repairing defective poles.

Project Alternatives

No alternatives

Technical Aspects

This project includes the cost of pole replacement, pole reinforcement, and fumigation.

Project No: 41001307 Cable Replacement

Company: 001
Location: 410

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

01-14,02-14,03-14,04-14,05-14,06-14,07-14,08-14,09-14,10-14,11-14,12-14. Monthly clearings occur every year thereafter.
Note the above interim in-service dates will be different, quarterly, for the cable replacement blanket.

Project Need Justification

The known faulted cable on system is 665,000 ft. (out of 28 million ft.) is growing at a rate of 108,000 ft./year over last 10 years. 4 million dollars allows us to replace approximately 77,000 ft./year which is still less than the rate of increase. Using PNM established guidelines; PNM can prioritize cables making the largest impact to SAIDI. This should keep the SAIDI minutes in the range between 5-7 SAIDI minutes on the system based upon historical data. PNM anticipates spending the allotted money for Underground Cable will decrease the rate of increase for number of faults. The concern is maintaining consistent footage replaced with escalating cost increasing per ft.

Project Alternatives

Project alternatives will be assessed at the work order level.

Technical Aspects

The technical aspect swill be assessed on the work order level.

Project No: 41001612 Santa Fe Bird Guard

Company: 001
Location: 410

Project Information

Construction Start Date 4/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

11/1/2015

Note the above interim in-service dates will be different, quarterly for Bird Guarding

Project Need Justification

We have identified the bird laws as a regulatory vulnerability for PNM. This project demonstrates a good faith effort to protect birds and thereby limits corporate liability for prosecution under the Migratory Bird Treaty Act (MBTA) and other bird laws. Violations of the MBTA and other "bird laws" constitute a significant liability for utilities. Additionally, over time the project will result in fewer outages and increased customer satisfaction. It will also positively affect PNM stakeholders concerned with bird and wildlife issues.

Project Alternatives

Replace entire structures to meet raptor safe design criteria, resulting in a higher cost solution. Not address bird guarding issues and risk violating the MBTA and other bird laws.

Technical Aspects

Retro fit existing overhead structures with insulating components that prevent electrocution of birds, causing both wildlife deaths and power outages.

Project No: 41001614 Colinas Single Phase loop Galisteo Phase 2

Company: 001
Location: 410

Project Information

Construction Start Date 4/1/2015 In Service Date Completion Date 12/31/15

List Interim In-Service Dates

Project Need Justification

This project is necessary in order to install a second source to a very long, non-standard, underground radial. Because restoration times are several hours in duration, a second, or back up feed is necessary to provide reliable customer service in this area of our service territory. This project is necessary to minimize outages due to cable faults and shorten restoration time.

Project Alternatives

None available, non-standard line exists today serving customers. This is a standard and cost effective procedure.

Technical Aspects

Install Approximately 5,500' of 1/0 cable to loop a portion of the radial.

Project No: 41001615 Camel Tracks 12 to Beckner 13 Tie

Company: 001
Location: 410

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date 06/30/15

List Interim In-Service Dates

NA

Project Need Justification

NOTE: This project is actually the upgrade of Camel Tracks 11 from 1/0AL to 750AL. Need for additional feeder capacity due to an outage of Beckner Substation during peak load periods. Additional customers will be left without service until repairs are completed. Equipment overloads are during an outage of Beckner Substation during peak load periods. This project will upgrade 1/0AL cable (rating of 135A) with 750AL cable (rating of 420A) from Camel Tracks Substation to the existing Beckner 13 OH circuit. Underground construction is required due to height restrictions near the Santa Fe Airport. The upgraded feeder tie will allow Camel Tracks Substation to support a portion of Beckner 13 during an outage of Beckner Substation and still serve Waste Water Treatment Facility (1MW).

Project Alternatives

A no action alternative was considered but not chosen. To improve reliability and avoid load that cannot be served during an outage of Beckner Substation additional feeder capacity on Camel Tracks 11 is required.

Technical Aspects

The project consists of the following items:

- Upgrade the 4/0AL to 750AL JCN from Camel Tracks Feeder 11 breaker to switch SW2007FB, about 25ft
- Upgrade the 1/0AL to 750AL JCN from switch SW3435FB to Pole U62A010, about 5,500ft
- Reconductor 2ACSR OH to 397AAC from Pole U62A010 to Pole U61D045 designed to support a 570amp rating, about 7,300ft
- Relocate capacitor C25F, 600kvar, from Pole U62A030 to Pole U62A001
- Retire 2/0ACSR OH from Pole U62A028 to Pole U62B043
- Install a normally-closed SCADA controlled switch on a new pole between Poles V61C068 & V61C067

Project No: 41001707 Santa Fe Pure Project

Company: 001
Location: 410

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

Project Need Justification

This work was identified via Automated Line Patrols (ALPS) and involves repairing and replacing small capital items including; arrestors, cross-arms, cut-outs, capacitors, and insulators. There is a substantial quantity of work that has been identified from past ALPS inspections and on-going inspections. This work is necessary to maintain reliable service and safety to the public and PNM line crews. NMPRC Rule 17.9.560, Service Standards for Electric Utilities Rules, outlines requirements for following electrical and safety standards (National Electric Safety Code), minimizing interruption of service, and ensuring adequate protective safety measures. Not performing this work may decrease reliability and increase hazards to PNM personnel and the public.

Project Alternatives

Alternatives will be evaluated on the work order level.

Technical Aspects

Replace existing faulted equipment.

Project No: 41001711 Ft Marcy 14 A-phase at Pole Y58B104 Upgrade

Company: 001
Location: 410

Project Information

Construction Start Date 1/1/2011 In Service Date Completion Date 07/15/14 Page 1

List Interim In-Service Dates

06/30/2014

Project Need Justification

The A-phase on the northern branch of Ft. Marcy 14, per the Synergee model, is carrying 123 amps. The cable is 1/0 AL UG with a rating of 135 amps. Therefore, this single phase lateral is at 91% of rating. The normal condition voltage on this lateral is 114.7. This voltage is below the ANSI Range A lower limit and at the Range B lower limit of 114.6 volts. Under normal conditions this lateral is loaded near rating and the voltage is marginally acceptable. During contingent conditions the voltage on the lateral is below the Range B lower limit (111.2 volts, Table 17) and is unacceptable.

Project Alternatives

Na

Technical Aspects

The project consists of upgrading 2,100 ft of overhead using 397 AAC, 11,700 ft of new overhead using 397 AAC on steel poles and about 10,000 ft of new single phase using 1/0 AL to create loops.

Project No: 41001714 Halona 11 Voltage Conversion

Company: 001
Location: 410

Project Information

Construction Start Date 1/1/2014 In Service Date Completion Date 02/01/15 Page 1

List Interim In-Service Dates

NA

Project Need Justification

Prepare the Santa Fe 4.16kV distribution system for future operation at 12.47kV. Improve system capabilities and support long term reliable service to Santa Fe area customers. Operating the distribution system at 12.47kV instead of 4.16kV will allow for higher load serving capacity, decrease distribution system losses and ensure continued or improved service reliability. Provide operation flexibility to allow the transfer of feeder load to adjacent 12.47kV feeders.

Project Alternatives

A no action alternative was considered but not chosen. The Santa Fe 4.16kV system consists of 4 substations transformers, which provide backup service to each other in the event of an outage due to failure or maintenance. The average age of the transformers is 63 years. Load would be transferred to available adjacent transformers in the event of a transformer outage. This would place the system at risk should an additional transformer fail. Acquisition of a new transformer replacement would take upwards of 12 months. There is insufficient transformer and feeder capacity to support 100% of the load while 2 transformers are out-of-service if an additional 4.16kV transformer is forced out-of-service.

Technical Aspects

This project requires upgrading all equipment on Halona 11 from 4.16kV to 12.47kV operation

Project No: 41001715 Mejia 14 Fin Del Sindero Rd Line Extension

Company: 001
Location: 410

Project Information

Construction Start Date 1/1/2016 In Service Date Completion Date 06/30/16

List Interim In-Service Dates

NA

Project Need Justification

Acceptable operating limits on existing distributing substation or feeders are exceeded based on projected load during normal system conditions. Upgrades are essential to assure reliability.

Project Alternatives

The only alternative is to continue to operate with the current infrastructure, which poses risks to providing reliable service.

Technical Aspects

The project consists of the following items:

• Install a new PMH-10 at the intersection of Camino La Tierra and West Wildflower on Mejia Feeder 14 between switches SW2199F and SW2542F.

• Build 5,800ft of 397AAC OH conductor designed to support a 570amp rating from the new PMH-10 north along Fin Del Sendero to the intersection of Fin Del Sendero Rd and
Camino Delilah Rd

• Build 7,000ft of 397AAC OH conductor designed to support a 570amp rating from the intersection of Fin Del Sendero Rd and Camino Delilah Rd north along Paseo De Aguila
(AKA Tierra De Tano) to SW2530F located on Camino Ladera Rd west of Tierra De Tano and Paseo De Aguila intersection

• Upgrade SW2530F from a PMH-3 to a PMH-9 switchgear.

• Install 10,960ft of 1/0AL UG cable to develop single-phase UG loops and 12 double risers .

Project No: 41001814 Hickox 11 Voltage Conversion

Company: 001
Location: 410

Project Information

Construction Start Date 1/1/2014 In Service Date Completion Date 02/01/15 Page 1

List Interim In-Service Dates

NA

Project Need Justification

Prepare the Santa Fe 4.16kV distribution system for future operation at 12.47kV. Improve system capabilities and support long term reliable service to Santa Fe area customers. Operating the distribution system at 12.47kV instead of 4.16kV will allow for higher load serving capacity, decrease distribution system losses and ensure continued or improved service reliability. Provide operation flexibility to allow the transfer of feeder load to adjacent 12.47kV feeders.

Project Alternatives

A no action alternative was considered but not chosen. The Santa Fe 4.16kV system consists of 4 substations transformers, which provide backup service to each other in the event of an outage due to failure or maintenance. The average age of the transformers is 63 years. Load would be transferred to available adjacent transformers in the event of a transformer outage. This would place the system at risk should an additional transformer fail. Acquisition of a new transformer replacement would take upwards of 12 months. There is insufficient transformer and feeder capacity to support 100% of the load while 2 transformers are out-of-service if an additional 4.16kV transformer is forced out-of-service.

Technical Aspects

This project requires all equipment on Hickox 11 from 4.16kV to 12,47kV operation.

Project No: 41001914 Hickox 12 Voltage Conversion

Company: 001
Location: 410

Project Information

Construction Start Date 1/1/2014 In Service Date Completion Date 10/30/14 Page 1

List Interim In-Service Dates

NA

Project Need Justification

Prepare the Santa Fe 4.16kV distribution system for future operation at 12.47kV. Improve system capabilities and support long term reliable service to Santa Fe area customers. Operating the distribution system at 12.47kV instead of 4.16kV will allow for higher load serving capacity, decrease distribution system losses and ensure continued or improved service reliability. Provide operation flexibility to allow the transfer of feeder load to adjacent 12.47kV feeders.

Project Alternatives

A no action alternative was considered but not chosen. The Santa Fe 4.16kV system consists of 4 substations transformers, which provide backup service to each other in the event of an outage due to failure or maintenance. The average age of the transformers is 63 years. Load would be transferred to available adjacent transformers in the event of a transformer outage. This would place the system at risk should an additional transformer fail. Acquisition of a new transformer replacement would take upwards of 12 months. There is insufficient transformer and feeder capacity to support 100% of the load while 2 transformers are out-of-service if an additional 4.16kV transformer is forced out-of-service.

Technical Aspects

This project requires upgrading all equipment on Hickox 12 from 4.16kV to 12.47kV operation.

Project No: 41001915 Mejia 14 Estrada Calabasa Line Extension

Company: 001
Location: 410

Project Information

Construction Start Date 1/1/2016 In Service Date Completion Date 06/30/16 Page 1

List Interim In-Service Dates

NA

Project Need Justification

Acceptable operating limits on existing distribution substation or feeders are exceeded based on projected load during normal system conditions. The system must be upgraded to assure reliability.

Project Alternatives

There are no alternatives to performing upgrades to the system other than continuing to operate with current infrastructure.

Technical Aspects

The project consists of the following items:

• From the PMH-9 switch which replaced junction box J59F, located at the intersection of Paseo De La Tierra and Vuelta Montuosa, install about 3,200ft of 750AL JCN in the
existing conduit south to Paseo De La Tierra and Estrada Calabasa to a new riser.

• Build 14,000ft of 397AAC OH conductor designed to support a 570amp rating from the intersection of Paseo De La Tierra and Estrada east along Estrada Calabasa then east
along Estrada Redondo, then south along Vuelta Herradura to SW2530F located on Camino Ladera Rd west of Tierra De Tano and Paseo De Aguila intersection

Project No: 41002113 Downtown Manhattan Feeder phase 1

Company: 001
Location: 410

Project Information

Construction Start Date 1/1/2014 In Service Date Completion Date 12/31/14 Page 1

List Interim In-Service Dates

Project Need Justification

This is the continuation of the Santa Fe downtown system improvements. We are replacing 35 yr+ old equipment that has started to fail. We experienced a 16 hour outage in Dec 2010 that took out the entire downtown commercial district on Christmas Eve.

Project Alternatives

Leave existing system in place. Continue to repair underground circuits when they fail.

Technical Aspects

Installation of new underground switches and protection devices. Installation of underground conduit and cable to create looped systems. Overall objective to create manageable circuits, reduce customer outages and segregate single phase from three phase circuits.

Project No: 41002115 Downtown Manhattan Feeder phase 2

Company: 001
Location: 410

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date 12/31/14 Page 1

List Interim In-Service Dates

Project Need Justification

This is the next phase of the Santa Fe downtown system improvement continuation. Replacement of 35+ yr old equipment. Christmas Eve 2010 outage took out our downtown commercial for 16 hours.

Project Alternatives

Leave existing system in place. Continue to repair underground circuits when they fail.

Technical Aspects

Installation of new underground switches and protection devices. Installation of underground conduit and cable to create looped systems. Overall objective to create manageable circuits, reduce customer outages and segregate single phase from three phase circuits.

Project No: 41002213 Beckner 14 to State Pen 13 FDR tie 2013-2014

Company: 001
Location: 410

Project Information

Construction Start Date 11/1/2013 In Service Date Completion Date 09/30/14

List Interim In-Service Dates

Project Need Justification

The project must be completed to accommodate the load transfer for State Pen Feeder 13 for an outage of State Pen substation and Rodeo Feeder 13 for an outage of Rodeo substation. This will improve service reliability to the southwest area of Santa Fe.

Project Alternatives

Two alternatives were evaluated; This project and a new substation (San Cristobal). Building this feeder tie is a much lower cost of the two alternatives.

Technical Aspects

Install ~ 150' 750CU getaway from Becner Feeder 14 circuit breaker.
Install ~ 13,925' 750AL underground cable to create feeder tie to State Pen 13.
Install 2 - PMH-11 pad-mounted switchgears.

Project No: 41002314 Halona 14 Voltage Conversion

Company: 001
Location: 410

Project Information

Construction Start Date 1/1/2014 In Service Date Completion Date 12/01/14 Page 1

List Interim In-Service Dates

NA

Project Need Justification

Acceptable operating limits on existing distribution substations and feeder are exceeded based on projected load during normal system conditions. Failure to take action could cause system reliability issues.

Project Alternatives

None - this project is needed to ensure system reliability.

Technical Aspects

This project requires upgrading all equipment on Halona 14 from 4.16kV to 12.47kV operation.

Project No: 41002315 Eldorado Single phase loop redesign phase 2

Company: 001
Location: 410

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date 10/31/15 Page 1

List Interim In-Service Dates

Project Need Justification

This project is needed to loop existing long radial segments that experience long outages and take approximately 600 customers out for extended periods because of no alternative source of power

Project Alternatives

Leave existing system as is and replace system while the sections fail. This will lead to more customer complaints and reduction in reliability.

Technical Aspects

Install and replace sections of underground single phase cable and conduit creating a looped circuit.

Project No: 41002714 Eldorado Single phase loop redesign phase 1

Company: 001
Location: 410

Project Information

Construction Start Date 12/8/2014 In Service Date Completion Date 12/31/14 Page 1

List Interim In-Service Dates

Project Need Justification

Needed to loop long radial that contains several transformers. When underground fault occurs, 100+ customers are without power until faulted cable is located and repaired. Will improve reliability and SAIDI and CAIDI numbers.

Project Alternatives

Leave system in its current state and repair sections as they fail. This would increase customer complaints and reduce reliability.

Technical Aspects

Install and replace single phase underground cable to create viable loop systems. This will allow for redundant back up and quicker outage restoration.

Project No: 41002814 Colinas Single Phase loop Galisteo Phase 1

Company: 001
Location: 410

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date 12/31/14 Page 1

List Interim In-Service Dates

Project Need Justification

Needed to loop long radial that contains several transformers. When underground fault occurs, 100+ customers are without power until faulted cable is located and repaired. Will improve reliability and SAIDI and CAIDI numbers.

Project Alternatives

Leave circuit as currently configured and continue to have radial outages affecting a large customer base.

Technical Aspects

Installation and replacement of single phase underground circuits to create looped circuits. Includes conduit and cable installation.

Project No: 41003014 Paseo del tierra

Company: 001
Location: 410

Project Information

Construction Start Date 6/1/2014 In Service Date Completion Date 12/31/19 Page 1

List Interim In-Service Dates

Project Need Justification

This project is necessary to extend the backbone feeder and create a single phase loop systems for the purpose of more reliable service and to shorten the outage restoration time. We will eliminate single phase radials with the junction point associated with different feeders. This project eliminates safety hazard and operational inefficiency.

Project Alternatives

None. There is only one feed into the area, so the system would remain as it is today if the project is not moved forward.

Technical Aspects

Install ~ 10,300' 1/0 cable for the purpose of creating single phase loops. Also extend the 750kcmil three phase in order to install a new switch gear for the purpose of breaking up the loops.

Project No: 41003114 Eldorado to Colinas Tie

Company: 001
Location: 410

Project Information

Construction Start Date 1/1/2016 In Service Date Completion Date 12/30/16 Page 1

List Interim In-Service Dates

Project Need Justification

Needed to have a feeder tie to minimize outage restoration time by providing an alternative substation source to the residents in that service area. This will also allow for maintenance of feeder without requiring future outages.

Project Alternatives

Leave system in current state. Continue to manage through large outages when we lose a feeder.

Technical Aspects

Installation of underground 5" conduit system and installation of 750 backbone conductor. Will include the installation of a switching device.

Project No: 41034007 Tools & Equipment

Company: 001
Location: 410

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

Project Need Justification

Capital Tools required to install and maintain distribution equipment in a safe and efficient manner.

Project Alternatives

Use old and inefficient tools to perform jobs tasks. This could cause longer installation and repair time, while increasing the probability of injury to employees.

Technical Aspects

This would include the purchase of fault finding equipment, battery operated tools, climbing tools and many other time saving/ease of use tools.

Project No: 50000107 Line Extension - Residential

Company: 001
Location: 500

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

Project consists of many individual customer work orders which are placed in service at various times throughout the year.

Project Need Justification

This project provides for distribution line extensions necessary to serve new residential customers and is a requirement of the company under its obligation to provide service.

Project Alternatives

There are no alternatives as this project is required to provide service to customers.

Technical Aspects

The project includes the costs of engineering, design, construction labor, and materials for the installation of overhead or underground distribution wires, poles, conduits, switches, and other ancillary equipment necessary to serve new residential customers. Customers are responsible for these costs less credits they are allowed under PNM's Rule 15 Line Extension Policy approved by the PRC.

Project No: 50000207 Line Extension - Commercial

Company: 001
Location: 500

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

Project consists of many individual customer work orders which are placed in service at various times throughout the year.

Project Need Justification

This project provides for distribution line extensions necessary to serve new or expanding commercial customers and is a requirement of the company under its obligation to provide service.

Project Alternatives

There are no alternatives in that this project is required to serve customers. Line extensions are designed to the minimum system requirements in accordance with PNM Rules & Regulations.

Technical Aspects

The project includes the costs of engineering, design, construction labor, and materials for the installation of overhead or underground distribution wires, poles, conduits, switches, and other ancillary equipment necessary to serve new or expanding commercial customers. Customers are responsible for these costs less credits they are allowed under PNM's Rule 15 Line Extension Policy approved by the PRC.

Project No: 50000507 Lighting

Company: 001
Location: 500

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

Project Need Justification

This is a blanket project to install and remove street lighting in accordance with Rate Schedule 20.

Project Alternatives

Customers can choose to install public street lighting using a contractor of their choice. There is no alternative for PNM.

Technical Aspects

Install Street lighting Poles and lighting, wiring, transformers, and ancillary lighting equipment.

Project No: 50000607 Distr. Remove & Replace

Company: 001
Location: 500

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A Page 1

List Interim In-Service Dates

Project consists of many individual work orders which are placed in service at various times throughout the year.

Project Need Justification

This project includes removal and replacement of existing electric distribution facilities that have failed or been damaged. Generally this is replacement of like for like. The project also includes relocations of facilities in road rights of way for road re-alignments or widening projects. Project drivers include equipment failure and public improvement projects.

Project Alternatives

Alternatives will be evaluated as needed.

Technical Aspects

Remove and replacement of electric distribution facilities include the design and installation of conduit systems cable, wire, poles, and overhead and underground switches, protection equipment, and other equipment.

Project No: 50000707 Distr. System Improvements

Company: 001
Location: 500

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

Project consists of many individual work orders which are placed in service at various times throughout the year.

Project Need Justification

This project upgrades existing electric distribution facilities to increase load serving capability, provide voltage support, enhance system protection, and maintain system reliability.

Project Alternatives

Alternatives will be evaluated as needed.

Technical Aspects

Distribution system improvements include the design and installation of conduit systems cable, wire, poles, and overhead and underground switches, transformers, and protection equipment. This project also includes replacement of vandalized copper pole grounds with copper clad steel grounds which are less susceptible to theft. Installation of bird guarding is also included in this project to help reduce outages caused by birds and other small animals.

Project No: 50000807 Services

Company: 001
Location: 500

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

Generally, this blanket work order is cleared quarterly; 04-15,07-15,10-15,12-15

Project Need Justification

This project includes the costs of engineering, inspections, and installation of service wires and equipment to provide service to residential and non-residential customers.

Project Alternatives

This project is required to provide service to customers.

Technical Aspects

The project includes the costs of engineering, inspections, and installation of service wires and equipment for providing service to residential and non-residential customers. Note; materials used for this location are included with the Albuquerque Services Project.

Project No: 50001613 Renewable Solar 22MW-Dist Valencia

Company: 001
Location: 500

Project Information

Construction Start Date 5/28/2013 In Service Date Completion Date 09/30/14 Page 1

List Interim In-Service Dates

Project Need Justification

The request is identified as Project GDP Manzano Solar Energy Center which is a 9 MW solar site. This request is based on the 'Open Access Transmission Tariff of Public Service Company of New Mexico', Attachment J 'Small Generator Interconnection Procedures (SGIP) for Generator Interconnection Less Than 20 MW'.

Project Alternatives

This project helps PNM achieve its renewable energy ambitions and was chosen as the most cost effective project type.

Technical Aspects

Installation of PNM material and equipment to include 2800 feet of new 3-phase overhead distribution line, reconductor of approximately 1026 feet of existing distribution line. Build & install 1600 feet new 3-phase underground distribution line, a new primary meter, S&C Intellirupter and GOLB switch.

Project No: 50001614 Los Morros Feeder 24

Company: 001
Location: 500

Project Information

Construction Start Date 1/1/2014 In Service Date Completion Date 12/01/14 Page 1

List Interim In-Service Dates

NA

Project Need Justification

This project is to provide a new feeder source into the Los Lunas area by building a new getaway from the Los Morros Unit II switchgear and build a new 397 AAC overhead circuit, approximately 4,000 ft. to connect to a portion of the existing Los Morros Feeder 13. A Valencia area reconfiguration study conducted in 2013 showed that the present load on Los Morros Unit 1 and Los Lunas area substations is limited for contingencies due to existing loading on Los Morros Feeder 13 and the surrounding area transformer capacity at San Clemente and Los Lunas substations. The Los Morros Unit II transformer has available capacity, but does not have a path that can be utilized. The new Los Morros Feeder 24 will reduce the load presently on Los Morros Feeder 13 and will allow both Los Morros Unit transformers to be utilized during contingencies.

Project Alternatives

This is the only viable solution. The need for Los Morros Feeder 24 was anticipated when the Los Morros Unit II transformer was installed. At that time, a four-feeder switchgear was installed at Los Morros Substation and two feeders were placed in service. One of the available feeder bays will be used for Veranda Feeder 24.

Technical Aspects

Build a new feeder from Los Morros Unit II Substation to split the present Los Morros feeder 13 service area. Extend Los Morros Feeder 24 to the west using 397 AAC and connect to the existing overhead line.

Project No: 50001707 Belen Pure Project

Company: 001
Location: 500

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

Continuous throughout the year. Work orders are written by feeder.

Project Need Justification

This work was identified via Automated Line Patrols (ALPS) and involves repairing and replacing small capital items including; arrestors, cross-arms, cut-outs, capacitors, and insulators. There is a substantial quantity of work that has been identified from past ALPS inspections and on-going inspections. This work is necessary to maintain reliable service and safety to the public and PNM line crews. NMPRC Rule 17.9.560, Service Standards for Electric Utilities Rules, outlines requirements for following electrical and safety standards (National Electric Safety Code), minimizing interruption of service, and ensuring adequate protective safety measures. Not performing this work may decrease reliability and increase hazards to PNM personnel and the public.

Project Alternatives

None - project is necessary to ensure reliability and reduce risks for PNM line crews.

Technical Aspects

Primarily involves like for like replacement of aging/obsolete or damaged equipment.

Project No: 60001611 SW Mesa Substation

Company: 001
Location: 600

Project Information

Construction Start Date 1/1/2011 In Service Date Completion Date 12/15/14 Page 1

List Interim In-Service Dates

Project Need Justification

By the summer of 2012, the Central Substation transformer, rated 21.8 MVA, will be at 107% of normal rating with all lines in service. By the summer of 2012, the South Coors Substation transformer, rated 23.4 MVA, will be at 104% of normal rating with all lines in service. An outage of Central Substation during peak load conditions would result in overloading the South Coors Substation transformer by 103% of its 24.9 MVA emergency rating. The southwest mesa is experiencing rapid development because of available land. Area access has been improved by the extension of Rio Bravo Blvd (extension named Dennis Chavez Blvd). Also, a new Super Wal-Mart at the intersection of Rio Bravo and Coors opened.

Project Alternatives

One alternative considered was to install a second 115-12.47 kV, 33.6 MVA transformer, 12.47kV four feeder switchgear, a tie breaker and a main breaker at the existing Central Substation. This option is more costly since it requires site expansion and express feeders to be developed and extended south into the service area. A second alternative considered was to install a second 115-12.47 kV, 33.6 MVA transformer, 12.47kV four feeder switchgear, a tie breaker and a main breaker at the existing South Coors Substation. This option is more costly as it requires site expansion and express feeders to be developed and extended west and north into the service area.

Technical Aspects

The project is to construct a new substation consisting of one 115-12.47 kV, 33.6 MVA transformer, one 4-feeder switchgear with a tie breaker and a main circuit breaker, and one 115kV circuit breaker. The substation will be located near Gibson Blvd SW and Snow Vista Blvd. SW in Bernalillo County. Four new feeder get-aways using 750 MCM CU cable will be built to connect the substation to the existing area distribution system.

Project No: 60001613 Unser 14 System Improvements

Company: 001
Location: 100

Project Information

Construction Start Date 11/7/2013 In Service Date Completion Date 08/30/14 Page 1

List Interim In-Service Dates

NA

Project Need Justification

The purpose of this project is to provide full back up support of Unser Feeder 14 during an outage of the circuit by utilizing the developer installed tie between switches SW3199 and SW2133. At present, Synergee models show that the backup feeder, St. Joseph 13, will exceed its emergency conductor rating of 550A by 100A on B-phase when 75% of Unser 14 is transferred to the circuit. As a result, the present single contingency plan for Unser 14 includes a “Don’t Restore Load” statement if the load on St. Joseph 13 is expected to exceed the 550A emergency conductor rating. Customers downstream of switch SW2027A would need to remain out of service until the outage problem is corrected.

Project Alternatives

None

Technical Aspects

This project is to construct an overhead distribution tie on Unser Feeder 14 by installing approximately 2,470 ft. of three-phase feeder class circuit using 397AAC along Tierra Pintada St. NW between switch SW3199A and switch SW2133. The project includes the installation of an 1800 kVAR capacitor bank on Tierra Pintada St. NW north of Gunnison Pl. NW and the installation of a new 600A GOLB switch north of the intersection of Unser Blvd. and Ladera Dr. on or near pole D15D141. The project also includes creating an open point on Unser Feeder 14 by opening switch SW2027A, located east of the intersection of 98th St. NW and Ladera Dr. NW.

Project No: 60001713 SF Switchgear Replacements

Company: 001
Location: 410

Project Information

Construction Start Date 9/1/2013 In Service Date Completion Date 12/31/14 Page 1

List Interim In-Service Dates

Multiple work orders will be written; possibly one for each switchgear, thus the individual WOs will be cleared as soon as possible after the switchgear is replaced.

Project Need Justification

This project involves replacing approximately 50 non-load break pad-mounted switchgear in the Santa Fe Division over a three year period. Older style switchgear pose an operational hazard and reliability exposure. Switchgear flashovers and fires have occurred in past attempts of removing non-load break fuses. Fires have also been caused by the failure of aging and the inferior design of older mechanical switch mechanisms. A survey of nearly half of the switchgear in Santa Fe has identified 48 such switchgears of this older, non-load break, style.

Project Alternatives

The current alternative to replacement is an operational edict that disallows operation of these switches or removal of fuses in these switchgear while energized. Thus, performing planned or emergency outages for customers or for utility needs requires locating load break capable switchgear elsewhere on the feeder which increases the number of customers affected by outages when switching or fuse removals are required. This is not a viable long-term solution due to the increased inconvenience (reliability) of customers' service. It also effectively negates the operational capabilities envisioned when the switches were initially installed and results in operational inefficiencies.

Technical Aspects

Switchgear with a higher priority need for replacement will be worked first beginning with eight switchgear to be replaced in 2013, 25 in 2014 and 17 in 2015.

Project Need Justification

This project is to serve the area south of Hwy 263 to Marquez Rd. and east of the Rio Grande River in southeast Valencia County by developing a new distribution substation. The new substation is recommended due to existing demand and is expected to support growth along the Hwy 47 corridor and the Manzano Expressway. Tome, Manzano, and El Cerro Substations are currently providing the distribution delivery capacity for this area. College Substation will provide backup capacity to the afore mentioned substations. Currently a Manzano Substation outage during peak load periods would overload the adjacent area El Cerro and Tome Substation transformers by over 180 hours per year. This project will greatly simplify operation of the system, by eliminating several supplemental cascading load transfers presently utilized, minimize outage restoration times, and allow distribution operations more certainty that adjacent facilities,
required to accomplish the proposed restoration, will be available when needed.

Project Alternatives

Two alternatives were considered:
The first was to install a unit two transformer at the existing Manzano Substation. A Manzano Unit II option could be used to provide backup support for Manzano Unit I and Tome Substation. However, due to the length of the feeders from Tome Substation to the existing Manzano Substation, voltage levels would be on the low side of the acceptable voltage range for contingency situations. Any additional load growth would require additional distribution feeder voltage support improvements. This option would also only allow two new feeders from a second unit at Manzano Substation that could be effectively used at this time to unload Manzano Feeder 11 and 13 and to provide backup support to the area.
The second alternative considered was to install a unit two transformer at the existing El Cerro Substation. An El Cerro Unit II option could be used to provide backup support for El Cerro Unit I and Manzano. The proposed feeders brought out of the substation do not help resolve issues associated with Tome Substation outages to the south which is a less efficient use of the new transformer capacity in comparison to the preferred alternative. This location also would not alleviate the long length of the feeders between Tome Substation and Manzano substation, so voltage levels will initially be on the low side of the acceptable voltage range for contingency situations. Any additional load growth would require additional distribution feeder voltage support improvements. Again, this alternative has only two feeders that could be effectively used to unload El Cerro 12 and Manzano 11 and to provide backup support to the area.

Technical Aspects

This project includes the purchase of a new substation site under the 115 kV AT transmission line in the vicinity of the UNM Valencia College. The substation will

consist of a new 115-12.47 kV, 22.4 MVA substation transformer and four-breaker switchgear.

Project No: 60001813 Plateau Fiber Project Co 001

Company: 001
Location: 600

Project Information

Construction Start Date 10/24/2014 In Service Date Completion Date 12/31/14

List Interim In-Service Dates

Project Need Justification

Construction required extending PNM SONET Communication network to Taiban and Blackwater Switching Stations. The Construction will provide SONET protection (ring protection) for PNM critical SCADA and Protective Relaying circuits serving these stations and associated transmission facilities. This work effort will meet future NERC requirements specific to critical utility communication facilities and addresses the replacement of an existing 25+ year old microwave system.

Project Alternatives

Replace existing Microwave System current Microwave technology. The replacement Microwave system would be a non-protected lateral system serving PNM's transmission and station assets in Eastern New Mexico. The cost of the Microwave option would be higher than the proposed fiber optic SONET network and it would not have the capacity or loop protection available in the SONET technology.

Technical Aspects

The proposed solution will meet the Utility's communication requirements in Eastern New Mexico, specifically to Blackwater and Taiban for the next twenty years. It provides a protected communication service for PNM critical SCADA and protective relaying operations and mitigates the "downtime potential" from fiber optic path or equipment failures.

Project No: 60001814 La Morada Substation

Company: 001
Location: 600

Project Information

Construction Start Date 1/1/2014 In Service Date Completion Date 05/01/15 Page 1

List Interim In-Service Dates

Na

Project Need Justification

The purpose of the La Mirada Substation is to provide normal and backup capacity in the area currently served by St. Joseph & Unser substations in Albuquerque, NM. Currently for an outage of St. Joseph 12 and Unser 14, there is a risk of leaving load unserved during an outage of either St. Joseph or Unser Substations.

Project Alternatives

One alternative considered was to locate the substation at 98th and Ladera. The Project is the preferred alternative because of the centralized location to existing load. The 98th and Ladera location is southwest of the Project and would primarily support future growth to the west of 98th and Ladera. However, if this alternative was chosen only two of four feeders from a 98th and Ladera Substation could be effectively used to unload Unser feeder 14 and to provide backup support to the area. A second alternative considered was to install a second transformer at the existing Unser Substation. The transformer could be used to provide backup support for an Unser Unit I transformer outage. However, there are physical impediments on both sides of Unser substation limiting feeder routes. The Ladera Golf Course to the east of Unser makes it difficult for Unser Unit II feeders to support a St Joseph Substation outage. The Petroglyph National Monument to the west does not allow Unser Unit II feeders to support load growth west of Unser Substation. Also costly express feeders would have been needed to be built to support load growth to the south of Unser Substation making this option unviable.

Technical Aspects

This project includes installing a new 115-12.47kV, 33.6 MVA substation transformer and a six bay, four-feeder switchgear will be installed at the new La Morada Substation location. Transmission service to the new substation will be from the 115kV WB or BW line depending on final location of property purchased. Both 115kV lines exit West Mesa Station and cross Unser Blvd. near the proposed location.

Project No: 60002010 Misc Substation Improvements

Company: 001
Location: 600

Project Information

Construction Start Date 1/1/2011 In Service Date Completion Date N/A Page 1

List Interim In-Service Dates

Projects are placed in-service as they are completed

Project Need Justification

Project Alternatives

This blanket IA will have multiple work orders; each for a small capital replacement or improvement. Alternatives are assessed at WO level.

Technical Aspects

This blanket IA may be used for replacement of station batteries, lightning arrestors, transformer bushings, and metal clad switch gears.

Project No: 60002013 Distr Substation Grounding Repairs

Company: 001
Location: 600

Project Information

Construction Start Date 1/1/2014 In Service Date Completion Date 12/20/18 Page 1

List Interim In-Service Dates

Multiple stations are included in this program. In-service dates at least every 2 months.

Project Need Justification

This project involves replacing materials that have either been stolen or damaged at distribution substations. This project also involves the hardening of stations to prevent/deter future theft. This project is required to replace stolen materials and will also improve the safety for the public and PNM employees.

Project Alternatives

None - this project is required in order to replace stolen materials and reduce the risk to PNM personnel.

Technical Aspects

Project will involve purchasing replacement equipment, primarily copper that was stolen, as well as improving the security of distribution stations to deter further thefts.

Project No: 60002110 Misc 46kv Line

Company: 001
Location: 600

Project Information

Construction Start Date 1/1/2014 In Service Date Completion Date N/A

List Interim In-Service Dates

Project Need Justification

This project is for annual minor capital improvements and replacements associated with 46kv lines, such as replacement of structures to improve clearances or poles which have reached the end of their useful service life.

Project Alternatives

These minor improvements or replacements are required to maintain continued safe and reliable operation of 46kv lines. There typically are no alternatives to performing the work.

Technical Aspects

Each task is evaluated individually. Life extension (such as ground line reinforcement) verses replacement is evaluated based on the possible impact on reliability and long-term maintenance costs.

Project No: 60002113 46 kV Switch Replacement

Company: 001
Location: 600

Project Information

Construction Start Date 04/01/2013 In Service Date Completion Date 01/31/15 Page 1

List Interim In-Service Dates

ISD every quarter in 2016.

Project Need Justification

Many 46kV switches have deteriorated significantly and do not perform properly. This project involves purchasing and installing new switches and is part of an on-going program to replace damaged/obsolete equipment. Failure to replace could result in loss of functionality leading to increased outage times and unnecessary safety risks to PNM employees.

Project Alternatives

Do nothing and take the risk of using poor and unsafe equipment because a switch retrofit is not viable an option.

Technical Aspects

Purchase and install new GOAB 46kV switches and replace mounting structures if required.

Project No: 60002213 Distribution Breaker Replacement

Company: 001
Location: 600

Project Information

Construction Start Date 1/1/2014 In Service Date Completion Date 06/01/15 Page 1

List Interim In-Service Dates

NA

Project Need Justification

The purpose of the substation is to provide capacity to support the projected load growth in the southwest section of Santa Fe near San Cristobal Village, Rancho Viejo, and the Community College district. State Pen Feeder13 currently serves the area. Based on feeder loading projections, the load requirements of the area will outgrow the capacity of State Pen Substation in the 2012 timeframe. The new substation will provide the needed capacity to serve the projected load. It will also provide feeder tie capability to Rodeo Feeder13 and State Pen Feeder 13. The SL/San Cristobal 115kV line tap is needed to serve the new San Cristobal Substation from the 115kV SL line. Load duration curve shows Rodeo 13 exceeds rating for 100 hours when backing up State Pen 13.

Project Alternatives

NA

Technical Aspects

This project is the construction of the new San Cristobal Substation near the intersection of Hwy 14 and Camino Justicia. This project includes acquisition of the substation site and the installation of one, 115-12.47 kV, 33.6MVA transformer with a main breaker and 4-feeder switchgear plus a tie breaker. This project also includes construction of approximately 4.2 miles of new 115kV line by re-routing the RS 115 kV line to the new substation. A 115 kV circuit breaker is required at San Cristobal Substation to be located between San Cristobal and State Pen Substations.

Project No: 60002313 Emergency and Aging Equip Distr

Company: 001
Location: 600

Project Information

Construction Start Date 5/31/2013 In Service Date Completion Date 12/31/18 Page 1

List Interim In-Service Dates

As equipment is delivered, approximately 6 W.O.'s per year.

Project Need Justification

Project involves purchasing long lead specialty equipment that cannot be reasonably acquired in a few days when an emergency occurs. Items include medium power transformers, relays, switches, and switchgear. This project also addresses the replacement of failing or functionally obsolete equipment, primarily at distribution stations.

Project Alternatives

Alternative is not to purchase emergency equipment or to replace failing equipment. This may require reconfiguration of the system, loss of redundancy, and loss of load during the time it takes to acquire and install this equipment. It is not readily available on the market or from other utilities.

Technical Aspects

Items to be purchased will include medium power transformers, relays, switches, and switchgear. This equipment may require specialty design or characteristics (especially for direct replacement.)

Project No: 60002314 ZB 46kv retirement

Company: 001
Location: 600

Project Information

Construction Start Date 11/3/2014 In Service Date Completion Date 12/31/14 Page 1

List Interim In-Service Dates

Project Need Justification

The existing ZB 46kv line is functionally obsolete and will therefore be removed. The substations that were associated with this line have all been retired as load has been transferred to new 115kv facilities.

Project Alternatives

Leaving the ZB 46kv line standing out of service would provide continuing maintenance costs and possible increased safety exposure to the public.

Technical Aspects

All structures and conductors will be completely removed and the existing ROW restored.

Project No: 60002315 Zamora Substation Upgrade

Company: 001
Location: 600

Project Information

Construction Start Date 7/24/2014 In Service Date Completion Date 12/30/15 Page 1

List Interim In-Service Dates

na

Project Need Justification

The purpose of this project is to increase capacity at the Zamora substation to maintain reliable service to customers located near Tijeras and south towards Chilili, NM in PNM's East Mountain division. Acceptable operating limits on the existing Zamora Substation and feeders are exceeded based on projected load during normal system conditions. With the upgraded transformer capacity, Zamora will have the capability to accommodate load transfers of a portion of Tijeras Substation in the event of a Tijeras transformer outage. Completion of the project will allow PNM to provide sufficient substation transformer capacity and add substation feeder capacity to support existing and projected load growth in the Tijeras to Chilili, NM area.

Project Alternatives

1. A no-action alternative was not an option as it could result in an emergency rating overload of the Zamora transformer for outages of Tijeras Substation, resulting damage/failure of the Zamora transformer. If this occurred, PNM would be required to implement rolling black-outs in the area to maintain acceptable loading on the Zamora transformer.
2. The construction of a new substation located nearby Sate Highway 217 and State Highway 222 was rejected due to significant transmission line construction costs that were estimated to be more than twice the cost of this project.

Technical Aspects

This project is to replace the existing 46-12.47kV, 6.25 MVA unit transformer at Zamora Substation with a dual voltage high side 115/46-12.47 kV, 22 MVA unit transformer. Due to increased load rating of the transformer, a new 1200 Amp rated four feeder switchgear will replace the existing two feeder 300 Amp rated switchgear. In addition, a new 115kV rated circuit switcher will replace the 46kV transformer fuses as the primary form of transformer protection.

Project No: 60002409 Corrales Bluff Unit Transformer

Company: 001
Location: 600

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date 06/01/16 Page 1

List Interim In-Service Dates

NA

Project Need Justification

The purpose of this project is to serve load growth in the area near Intel, the village of Corrales and areas near Cottonwood Mall in NW Albuquerque. Panorama Feeder 11 and Rio Hondo Feeder 13 presently serve this area. A Rio Hondo Reconfiguration study conducted in early 2013 shows that even with the Rio Hondo Area Reconfiguration project that will be completed in 2015, outages of either Cottonwood II or Panorama substations cannot be supported without using Sara unit I as a backup resource and utilizing more than one supplemental load transfer to pick up load for each feeder out of service. Installing a transformer at Corrales Bluff Station will provide the capacity needed to back up the Panorama and Cottonwood II Substations, as well as Rio Hondo Substation during an outage of any of these substations. Corrales Bluff Station is located directly behind the Intel Plant in Rio Rancho.

Project Alternatives

This is the only solution considered since the project location is located where the load growth is occurring and the Corrales Bluff station can accommodate a substation transformer. PNM already owns the Corrales Bluff station.

Technical Aspects

This project is to install a 115-12.47 kV, 33.6 MVA transformer and four-feeder switchgear at Corrales Bluff substation. The new Corrales Bluff Substation transformer will utilize the existing 115kV breakers 23362 and 24462 and connect to the 115kV line that terminates at in the Corrales Bluff Station.

Project No: 60002413 La Mirada Land Acquisition

Company: 001
Location: 600

Project Information

Construction Start Date 10/20/2014 In Service Date Completion Date 07/15/14 Page 1

List Interim In-Service Dates

N/A

Project Need Justification

This project involves setting aside funds for developing land acquisition needs for the new La Morada substation and related transmission tap that is necessary to provide normal and backup capacity in the Unser/Ladera area currently served by St. Joseph & Unser substations. Currently, there is a risk of leaving load unserved during an outage of either the St. Joseph or Unser substations.

Project Alternatives

One alternative considered was to accelerate the build of the 98th and Ladera Substation, currently in the budget with a start date of January 2018 and an in-service date of June 2019. However, the La Morada Substation is the preferred alternative because of its more central location to existing load. The 98th and Ladera Substation is southwest of the La Morada Substation and primarily needed to support future growth to the west of the substation. Only two feeders from a 98th and Ladera Substation could be effectively used at this time to unload Unser feeder 14 and to provide backup support to the area. In contrast, four feeders from a new La Morada Substation can be used immediately to unload Unser feeder 14 as well as Volcano feeder 13 and St. Joseph feeder 13. This eliminates the risk of leaving load unserved for either an Unser or St. Joseph substation outage and allows for more operational flexibility for backup support during an outage or maintenance of any of the area substations.

Technical Aspects

The estimate for the site was based on a valuation of the original site. During evaluation of that site, two more sites were evaluated because the original site was found to have had drainage and access issues. The second site contained title issues that could not be resolved. During the evaluations of the sites, surveying, engineering, and land service time were required for each respective sites. These additional hours increased the budget of the project.

Project No: 60002608 Santo Domingo Substation & Fdrs

Company: 001
Location: 600

Project Information

Construction Start Date 1/1/2011 In Service Date Completion Date 08/13/14 Page 1

List Interim In-Service Dates

Project Need Justification

Vulcan Materials is requesting service to the area gravel operations. Possible demand is 4.3 MVA (50% of value from service application).

Project Alternatives

Other options considered were 1) maintain the existing system configuration and 2) construct new 115-46kV facilities at the Algodones Station.

Technical Aspects

Construct a New Santo Domingo Substation. The New Santo Domingo Distribution Substation is to include a 14 MVA, 115-12.47kV transformer and four-feeder switchgear.

Project No: 60002613 Santo Domingo Sub Improvement

Company: 001
Location: 600

Project Information

Construction Start Date 4/30/2013 In Service Date Completion Date 08/15/14 Page 1

List Interim In-Service Dates

N/A

Project Need Justification

The project scope includes installation of protective equipment consisting of a 46 kV potential transformer, current transformers, and a ground source transformer on the 46 kV side of Santo Domingo Substation. The protective equipment will allow Kewa Substation Feeder 11 to provide backup service to Cochiti, La Bajada, and Kaiser Substations to the 46kV system through the Santo Domingo Substation 46/12.47kV transformer. This project will allow the 46kV line, sourced from Santa Fe, to be disconnected for a forced or planned outage by providing a backup source from Santo Domingo Substation until the 46kV line can be placed back into service.

Project Alternatives

These improvements support recommendations agreed to by PNM in NMPRC Case UT-07-00289 Final Order to maintain reliable service to Cochiti, La Bajada, and Kaiser Substations as a result of allowing retirement of the 46 kV ZB line from Santo Domingo Substation to North Switching Station in Albuquerque, NM.

Technical Aspects

The purpose of the reliability improvements is to accommodate load transfers to Kewa Substation, via Santo Domingo Substation and the ZB 46 kV line, from the Cochiti, La Bajada and Kaiser Substations service areas. The improvements will allow the radial ZB 46 kV line, sourced from Zia Switching Station, to be disconnected for a planned or forced outage by providing a backup source from Kewa Substation via Santo Domingo Substation.

Project No: 60002614 PNM Facilities Sale to City of Gall

Company: 001
Location: 600

Project Information

Construction Start Date 4/24/2014 In Service Date Completion Date 12/31/14 Page 1

List Interim In-Service Dates

None

Project Need Justification

The City of Gallup (Gallup) elected not to extend their Electric Service Agreement (ESA) with PNM Merchant and executed a new contract with another supplier effective June 30, 2014. A provision in the ESA enabled Gallup to purchase certain PNM facilities (including five substations, transmission lines, and associated equipment to serve Gallup) after terminating the ESA. In order for the purchase and sale of PNM facilities to be completed, PNM and Gallup had to undergo an appraisal process to determine the fair value price for the PNM facilities. The appraisal process is expected to be completed by December 31, 2014. The estimated value of the PNM facilities to be sold to Gallup is $4 million. A NMPRC filing will not be required since these PNM facilities were never used to serve retail customers or included in NM jurisdictional rates. A FERC filing will also not be required since the estimated value of the PNM facilities is below the $10 million threshold that would necessitate a FERC filing. The project funds will be used to coordinate the appraisal process, develop a formal Sale Agreement and complete the purchase and sale of the PNM facilities including any required legal support.

Project Alternatives

None - the sale of these assets is a contractual requirement

Technical Aspects

An appraisal will need to be completed to provide a fair market value determination of certain PNM facilities serving the City of Gallup, NM. PNM has five Gallup area substations; Noe, Allison, Sunshine, Fort Wingate, and Mendoza that will be included in the sale as well as any other related equipment. An appraisal services contractor will determine a fair market value of the PNM facilities serving Gallup, taking into account original cost, vintage year, replacement value, and a complete inventory of equipment from each substation. Also included in the sale are facilities that make up each of the two 115 kV radial line taps from PNM's Ambrosia to Yah-Ta-Hey ("AY") 115 kV line that serve Allison, Noe, and Sunshine Substation facilities and the PNM tap segments used to provide service to Fort Wingate and Mendoza Substation from the Tri-State Escalante to Yah-Ta-Hey ("GYTH") 115kV line. A final report will include the final fair market valuation of the substations, related equipment and line taps serving the five substations. The appraisal process requires PNM and Gallup to hire their own appraisers and compare appraisals in order to determine a fair value price for the PNM facilities. If the appraisals are within 10%, then PNM and Gallup will negotiate a final fair value price for the PNM facilities. If the appraisals are greater than 10%, then a 3rd appraiser will be hired to complete a 3rd appraisal which will be used to determine the final fair value price for the PNM facilities.

Project No: 60002715 12.5kV breaker replacment

Company: 001
Location: 600

Project Information

Construction Start Date 1/30/2014 In Service Date Completion Date 12/01/18 Page 1

List Interim In-Service Dates

1 station completed every month

Project Need Justification

Replaces aging 12.5 kV breakers in distribution switchgear removing potential health concerns and extending life of equipment.

Project Alternatives

Do nothing - which places electrical distribution of system at risk.

Technical Aspects

Remover aging breakers under outage on feedersand replace with new modern-style breakers complete with remote racking features. This improvement removes potentially hazardous substance from the switchgear, modernizes equipment, and improves safety. Breakers will be purchased and replaced across the system over a 6 year period.

Project Need Justification

During recent studies in the Los Lunas, MN area, it was determined that acceptable operating limits on the existing San Clemente distribution substation will be exceeded based on projected load during normal system conditions. Furthermore, the residential area served by San Clemente Substation is projected to continue to grow due to easy access to I-25 for commuters to Albuquerque, putting greater strain on this substation. Failure to address this overload could negatively impact system reliability.

Project Alternatives

A new unit substation could be built in another location. This option was not chosen, as the existing distribution feeders would need to be reconfigured, adding unnecessary cost and complexity to the project.

Technical Aspects

The substation upgrade will provide the transformer and feeder capacity needed to serve the growing load in the San Clemente area during normal as well as emergency loading conditions.

Project No: 60002913 Winrock Improvements

Company: 001
Location: 600

Project Information

Construction Start Date 1/1/2014 In Service Date Completion Date 02/15/15 Page 1

List Interim In-Service Dates

Project Need Justification

The Winrock Shopping Center Electric Distribution System Improvement project is necessary to improve commercial and residential service and reliability to PNM customers that are located in this area of Albuquerque. Much of the current underground system is 30 years old and is reaching the end of its useful life. This project involves replacing existing double radial 15kVsystem, manholes, and below grade vaults with a primarily looped system. This new system will allow PNM crews to safely and quickly switch out only the sections that require maintenance, repair, or additional equipment for additional future customers in a manner that does not require the entire system in the area to be de-energized.

Project Alternatives

A project alternative is to continue maintaining the system in its current configuration. This option was dismissed due to the safety and accessibility concerns raised. Increased operating expenses to repair and maintain the system, along with projected load increases with ongoing renovations deemed it necessary to proceed with the system improvement project.

Technical Aspects

The project involves installing a new 3-phase 750 kcmil peripheral loop, new switchgear, and removing existing underground vaults.

Project No: 60003115 Distr Cable Testing and Replace 2015

Company: 001
Location: 600

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date 12/31/16 Page 1

List Interim In-Service Dates

Various dates throughout the two year project life as multiple individual WO's are completed for segments or groups of segments replaced.

Project Need Justification

This project involves the replacement of failing underground cable based upon cable testing results. Costs include engineering, project coordination, testing, material, and labor. This project spans a two year period with testing completed in the first year and cable replacements made over the two year period. Underground cable has a life expectancy of 30-40 years. The risk of not replacing aging and failing cable includes more frequent and extended power outages which adversely affect reliability and customer satisfaction.

Project Alternatives

One alternative to replacing cable is to repair cable by cutting out the failed section of cable and splice new cable in its place. This alternative is used when multiple failures have not yet occurred on sections of the cable. Another option is to inject a substance to improve the integrity of insulation materials and extend the life of the cable. However, cable testing is thought to be a superior approach to targeting and replacing cable.

Technical Aspects

Cable is identified for testing based upon outage history, cable age, and cable type. The test is performed by disconnecting a cable segment from the system and applying a specialized calibrated equipment voltage to the cable. Based on partial discharge observed during testing the condition of the cable is determined to be good, in need of repair, or recommended for replacement.

Project No: 60003116 Distr Cable Testing and Replace 2016

Company: 001
Location: 600

Project Information

Construction Start Date 1/1/2016 In Service Date Completion Date 12/31/17 Page 1

List Interim In-Service Dates

Various dates throughout the two year project life as multiple individual WO's are completed for segments or groups of segments replaced.

Project Need Justification

This project involves the replacement of failing underground cable based upon cable testing results. Costs include engineering, project coordination, testing, material, and labor. This project spans a two year period with testing completed in the first year and cable replacements made over the two year period. Underground cable has a life expectancy of 30-40 years. The risk of not replacing aging and failing cable includes more frequent and extended power outages which adversely affect reliability and customer satisfaction.

Project Alternatives

One alternative to replacing cable is to repair cable by cutting out the failed section of cable and splice new cable in its place. This alternative is used when multiple failures have not yet occurred on sections of the cable. Another option is to inject a substance to improve the integrity of insulation materials and extend the life of the cable. However, cable testing is thought to be a superior approach to targeting and replacing cable.

Technical Aspects

Cable is identified for testing based upon outage history, cable age, and cable type. The test is performed by disconnecting a cable segment from the system and applying a specialized calibrated equipment voltage to test the cable. Based on partial discharge observed during testing the condition of the cable is determined to be good, in need of repair, or recommended for replacement.

Project No: 60003212 Subbstation Metering Modifications

Company: 001
Location: 600

Project Information

Construction Start Date 2/15/2012 In Service Date Completion Date 12/01/14 Page 1

List Interim In-Service Dates

Project Need Justification

As part of a recent rate case negotiation, the need for identification and caputring of load data for 5 small distribution substations was identified. This included metering upgrades to electronically transmit data to PNM's operations center and ability maintain this data in a historical database.

Project Alternatives

The only alternative is to maintain status quo of manual data collection. This would not meet the frequency or timeliness requested as part of the negotiation discussions.

Technical Aspects

Install meters that meet current standards and communications upgrades to transmit data to distribution operations center.

Project No: 60004413 Remote Racking

Company: 001
Location: 600

Project Information

Construction Start Date 9/27/2013 In Service Date Completion Date 03/31/15 Page 1

List Interim In-Service Dates

Every month as stations are retrofitted.

Project Need Justification

Remote racking provides a safe environment for removing switchgear breakers from service and providing visual open points. This installation will allow remote operation and reduce risks for PNM personnel.

Project Alternatives

None - this project is necessary to reduce risk to PNM personnel.

Technical Aspects

Racking of breakers directly at the distribution switchgear subjects employees to the possibility of arc flash. This installation will allow remote operation and reduce this safety hazard. This work has already been accomplished in the Albuquerque metro and Northern New Mexico areas. Southern New Mexico area installations are scheduled to be completed by mid-November 2014. Upon completion of the Southern New Mexico area, the distribution system-wide remote racking project will be complete.

Project Need Justification

This project provides discretionary funds for the Distribution Substation Supervisor to replace or upgrade ageing or obsolete Distribution Substation Equipment on PNM's electric distribution system. These projects are typically small projects that would require little or no engineering support. Some examples would be replacing or upgrading substation transformer components such as primary bushings, loads tap changer upgrades or replacements, replacing ageing distribution circuit breakers, or upgrading ageing circuit switchers in the distribution substations. The fund also covers costs for projects that extend the life of substation equipment, such as replacing all of the gasketing on the transformer.

Project Alternatives

The alternative to providing discretionary funding for Supervisory management of small projects would be to have all system equipment upgrades and replacement of obsolete equipment, regardless of scope, go through the same process for all of the capital projects, which would dramatically reduce the ability to address critical upgrades and replacement of failed or obsolete communication equipment.

Technical Aspects

The technical aspects of this project involve subject matter expert (supervisor) identifying critical distribution substation equipment that is in need of replacement or upgrade due to obsolescence, ordering the material and coordinating work to accomplish the upgrade or repair of the component. The projects vary depending upon need, but cover the range of work described in the justification section above.

Project No: 60028013 Outage Communication Project

Company: 001
Location: ESC

Project Information

Construction Start Date 12/1/2013 In Service Date Completion Date 12/31/14 Page 1

List Interim In-Service Dates

Project Need Justification

The character of this undertaking is to provide technology to support the planned and unplanned Outage Communication improvement initiative. In general, PNM's J.D. Power scores for "Keeping you (customers) informed about an outage" have been below industry and peer group averages. This is a key driver in overall customer satisfaction. Known factors affecting satisfaction related to this metric include the accuracy of projected restoration time, proactive customer notification, and customer notification when an outage is resolved. PNM's current OMS communicates with Banner CSR regarding outage status but it is not able to communicate with Services Suite and line crews. The Outage Communications DOC Systems Modification will enable OMS to communicate with Services Suite and line crews in real time and expand the information it communicates with Banner CSR. It will also improve proactive communication with customers, improve customer information access, improve internal communication, and improve outage reporting. The project will include an upgrade/update to the existing hardware and software and interfaces between Banner CSR and services Suite systems. The new system will be upgraded/updated and tested by PNM personnel and perspective hardware/software vendors.

Project Alternatives

Keep the current means of communicating with Banner CSR regarding outage status.

Technical Aspects

The project will include an upgrade/update to the existing hardware and software and interfaces between Banner CSR and services Suite systems. The new system will be upgraded/updated and tested by PNM personnel and perspective hardware/software vendors.

Project No: 60028014 DOC upgrades

Company: 001
Location: 600

Project Information

Construction Start Date 9/6/2013 In Service Date Completion Date 12/31/14 Page 1

List Interim In-Service Dates

Project Need Justification

Aging equipment and outdated facilities has resulted in difficulty managing the system during high volume of outages/calls. Additionally the DOC Media center is not well set-up for coordination with external media.

Project Alternatives

Continue with existing inadequate facilities - this optoin is not considered viable

Technical Aspects

Work on this project and other SCADA improvements will start in 2013. In 2014, funds will be utilized for to complete work including the insulation of ergonomic flooring and furniture, improved lighting, media communications hardware, status monitors, etc.

Project No: 60028113 DOC Scada System Replace

Company: 001
Location: 600

Project Information

Construction Start Date 4/15/2013 In Service Date Completion Date 12/20/14 Page 1

List Interim In-Service Dates

Project Need Justification

In the event that the Distribution Operations Center(DOC) needs to be evacuated or is destroyed a backup facility was required.

Project Alternatives

Technical Aspects

A backup DOC facility will be constructed at the Power Operations facility.

Project No: 60028114 Doc Wall Monitor System Phase II

Company: 001
Location: DOC

Project Information

Construction Start Date 3/31/2014 In Service Date Completion Date 10/31/14 Page 1

List Interim In-Service Dates

Project Need Justification

CDAP 60033313 was initiated to replace the current paper maps with installation of ultra-high resolution video display wall. The installation of ultra-high resolution video display wall to replace DOC paper wall maps will allow all the safety tagging to be consolidated in the OMS system and provide an automated display of the safety tags at resolution that will allow all or a significant portion of the distribution system in a particular division to be displayed.

Project Alternatives

Keep current paper maps and lose out on the functionality of a wall monitored system.

Technical Aspects

To drive the ultra-high resolution displays the OMS signal needs to be converted and reconditioned to achieve 32k resolution. This is accomplished by using dedicated video processing and interfaces called the Boxx computers and interfaces. Converting and conditioning of the OMS signal requires support from 5280Digital, the current contactor in charge of the DOC ultra-high result ion displays replacement. Currently, we don't have the capability in the OMS system to turn on/off three-phase and single-phase modeling of the distribution system, perform formal safety tagging, and do real-time model editing of the distribution system. This functionality requires software support changes from Oracle, provider of the OMS system. The arcFM doesn't support printing of the paper wall maps and updating of the paper wall maps must be accomplished using CAD drawing.

Project No: 60028213 Spidamin-Spidacalc Software

Company: 001
Location: 600

Project Information

Construction Start Date 3/31/2014 In Service Date Completion Date 05/15/14 Page 1

List Interim In-Service Dates

Project Need Justification

This project is the completion of the Spida project purchase. The initial purchase, Spidacalc (pole loading program) , provides references NESC violatiaons and possible solutions when structure information is entered into system One pole failure would pay for this software many times over.The second purchase is Spidamin. Spidamin is the companion product of the pole loading software and will be used as the data collection warehouse for inventory retention. Spidamin will also be used to process after the fact work orders. Not purchasing Spidamin will leave a giant hole in the automation and inventory process that we have worked so hard to accomplish for the FCC regulated responsibilities we have been assigned as a pole owner.

Project Alternatives

Over the course of the last seveal years our department has reviewed other software products, especially pole loading software. Spidacalc was chosen as the leader in the industry, based on performance and ease of use. Spida products in general were designed to be used in conjunction with Arc FM products. It was clear to our group that Spidacalc was the best choice. TNMP is already using Spidacalc and we decided that many synergies could be developed if both utilities were using Spidacalc.

Technical Aspects

The technical aspects were quite extensive as far as launching usage of the two new products, Spidacalc and Spidamin. BTS and the GIS group at PNM dedicated themselves to making it all work. New servers had to be purchased to house all the new data coming to the department. The Spidamin system allows for the licensee to see a limited landbase and some of PNM's infrastructure in order to accommodate them in submitting their FCC regulated pole attachment applications.

Project No: 60029905 Capital Reallocation

Company: 001
Location: 600

Project Information

Construction Start Date | In Service Date | Completion Date N/A | Page 1

List Interim In-Service Dates

Project Need Justification

Project used for miscellaneous accounting adjustments. Those adjustments include the annual AFUDC true for FERC Order 561 and E&S Clearing adjustments.

Project No: 60030013 Specialty Equip & Vehicle Co 001

Company: 001
Location: 600

Project Information

Construction Start Date 9/2/2013 In Service Date Completion Date 12/18/15 Page 1

List Interim In-Service Dates

yes, at least one per year.

Project Need Justification

This project involves replacing aging and functionally obsolete equipment need to perform system improvements and repairs. It will also involve the acquisition of equipment needed to support the current construction programs.

Project Alternatives

Use older equipment or lease the equipment. The purchases requested in this program have been evaluated by a multi-disciplinary group both for need and the benefits of purchase compared to leasing. Equipment that was identified as being more preferable to lease, will be leased and is therefore not included in the project.

Technical Aspects

Specify equipment that meets PNM's requirements and purchase this equipment from reputable vendors. This program is part of the Long Range Plan (LRP) and is a continuation of 2013 efforts.
