Project No: 76617032 TRIPPER DECK DUST SUPPRESSION

Company: 003
Location: 766

Project Information

Construction Start Date | In Service Date | Completion Date 07/31/14

List Interim In-Service Dates

These project will be in service on or before December 31, 2014

Project Need Justification

The San Juan coal handling systems are antiquated and in need of significant modifications to address safety issues (including control of combustible dust), obsolescence issues, performance issues, and consolidation following the decommissioning of two units. Dust control equipment and best practices in chute design have changed significantly since the coal handling systems were first installed. Most of the original dust control equipment and conveyor bellts are no longer functioning and therefore must be replaced. The presence of combustible dust is a hazard to both personnel and equipment.

Project Alternatives

There is no alternative to addressing the issue of combustible dust. Various technologies will create technical alternatives but the issue must be addressed. Similarly, a non-manual method of addressing chute and silo pluggage must be implemented.

Technical Aspects

Install dust collection hoods at coal transfer chutes and a water curtain based dust extraction system in the coal tripper room

Project No: 76617115 Common NERC Split MESH Network

Company: 003
Location: 766

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date 12/30/15 Page 1

List Interim In-Service Dates

Project Need Justification

As an owner and operator of a Bulk Electric System (BES), PNM is required to comply with applicable standards from NERC. This project is one of several projects (76616046, 76616815, 76617115, 76617815, 76617932, 76628039, 76628042, 76628044, 76628047, 76628215, 76628315, 76628415, 76628045) relating to NERC compliance Many standards apply but most of these projects are aimed at compliance with the latest version of the NERC CIP (Critical Infrastructure Protection) standard. The "Split MESH" project will move San Juan Generating Station from a "medium risk" asset to a "low risk" asset. The low risk designation will reduce compliance efforts and
costs.

Project Alternatives

Some alternatives in the method of compliance are available but there are no alternative to complying with the standard.

Technical Aspects

Physically divide the plant data highway into discrete segments to the facility can move from a "medium risk" classification to a "low risk" classification.

Project No: 76617132 ARC FLASH MITIGATION

Company: 003
Location: 766

Project Information

Construction Start Date | In Service Date | Completion Date 12/30/14

List Interim In-Service Dates

Specific sets of relays will be placed in service at various times in 2014, 2015 and 2016

Project Need Justification

This project is part of a group of projects (see also 76116513, 76117733, 76117747, 76416134, 76616036, 77916136, 77917925, 76617132, 76416424) that addresses equipment obsolescence issues and new standards for exposure to potential arc flash energy. Protective relay technology has moved from electromechanical devices to solid state devices. Electromechanical relays are becoming obsolete. OSHA regulations regarding exposure to potential arc flash energy have become more stringent since the San Juan Plant was designed and constructed. Solid state relays can be used to control arc flash incident energy.

Project Alternatives

The existing electromechanical relays could continue to be maintained but the task will become increasingly difficult as parts become less available. The alternative for compliance with arc flash exposure standards is personal protective equipment for employees assigned to task where arc flash exposure occurs.

Technical Aspects

Install relays and maintenance switches which will reduce the available arc flash incident energy. This project is part of a multiyear program to replace electromechanical relays with solid state relays. The relays are located in all areas of the plant - each unit, common areas and the switchyard.

Project No: 76617215 Common River Station Instrumentation Upgrade

Company: 003
Location: 766

Project Information

Construction Start Date | In Service Date | Completion Date 09/30/16

List Interim In-Service Dates

These systems will be in service by December 31, 2014

Project Need Justification

This project is part of a group of projects (group includes 76116714, 76117821, 76316532, 76416232, 76516072, 76617215, 76616311, 76717514, 76716015, 76617232) that addresses obsolesce issues in various local control systems. The original controls are mainly local panels with mechanical and electromechanical devices. They are being replaced with Programmable Logic Controllers (PLCs) which can be connected to the Distributed Control System (DCS). This will enable monitoring and operation from the control room as well as locally. As with all microprocessor based systems, upgrades are required periodically, including replacement of Input/Output (I/O) circuit boards and Control Processors (CPs).

Project Alternatives

The alternative is to continue to maintain the existing equipment but this will become increasingly costly and difficult as replacement parts become harder to find.

Technical Aspects

Replace existing obsolete sensing devices and signal transmitters with state of the art electronic devices

Project No: 76617232 PLC AND INSTRUMENTATION UPGRADE-LAKE STATION

Company: 003
Location: 766

Project Information

Construction Start Date | In Service Date | Completion Date 12/31/14

List Interim In-Service Dates

These systems will be in service by December 31, 2014

Project Need Justification

This project is part of a group of projects (group includes 76116714, 76117821, 76316532, 76416232, 76516072, 76617215, 76616311, 76717514, 76716015, 76617232) that addresses obsolesce issues in various local control systems. The original controls are mainly local panels with mechanical and electromechanical devices. They are being replaced with Programmable Logic Controllers (PLCs) which can be connected to the Distributed Control System (DCS). This will enable monitoring and operation from the control room as well as locally. As with all microprocessor based systems, upgrades are required periodically, including replacement of Input/Output (I/O) circuit boards and Control Processors (CPs).

Project Alternatives

The alternative is to continue to maintain the existing equipment but this will become increasingly costly and difficult as replacement parts become harder to find.

Technical Aspects

Replace existing obsolete controls with state of the art electronic devices (e.g., circuit boards, wiring, processors, graphical interfaces and control logic programming)

Project No: 76617315 Common A&B Coal Reclaim System Refurbishment

Company: 003
Location: 766

Project Information

Construction Start Date 5/1/2015 In Service Date Completion Date 12/30/15

List Interim In-Service Dates

Project Need Justification

The San Juan coal handling systems are antiquated and in need of significant modifications to address safety issues (e.g., control of combustible dust), obsolescence issues, performance issues, and consolidation following the decommissioning of two units. This project is part of several projects (see also 76616051, 76616120, 76616215, 76616415, 76617315, 76617415, 76628043) that will update the coal handling systems at San Juan. Dust control equipment and best practices in chute design have changed significantly since the coal handling systems were installed. Most of the original dust control equipment is no longer functioning. The presence of combustible dust is a hazard to both personnel and equipment. The existing reclaim systems do not support coal blending. The plant suffers from intermittent batches of poor quality coal. An on-line analyzer and blending capability will enable the plant to better manage poor coal quality. Air cannons are necessary for a safer means of addressing chute and silo pluggage. A manual method has been stopped because it was recognized an unsafe practice.

Project Alternatives

There is no alternative to addressing the issue of combustible dust. Various technologies will create technical alternatives but the issue must be addressed. Similarly, a non-manual method of addressing chute and silo pluggage must be implemented.

Technical Aspects

Reinstate operation of an abandoned coal handling system, replacing chutes and belts. This project has a broad scope. Feeders, belts and chutes will be replaced. Changes in chute geometry and the installation of new ducts collection equipment will require structural, electrical, piping and control changes. Conceptual engineering must be completed before a complete scope can be defined.

Project No: 76617332 Plant Common Shumway Arroyo Slurry Wall and Water Containment

Company: 003
Location: 766

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date 10/30/15

List Interim In-Service Dates

Project Need Justification

A Consent Decree has been issued to settle a lawsuit between PNM and the Sierra Club. This court order dictates improvements PNM shall implement to capture and treat ground water that flows under the San Juan Generating Station property. PNM is required to spend a minimum of $6 million on ground water related projects.

Project Alternatives

There are no alternatives. All aspects of the project as subject to the terms of the Consent Decree.

Technical Aspects

The Shumway Arroyo Slurry Wall is a complex project to construct a barrier wall keyed into bedrock such that it is impermeable to ground water flows. Water impounded behind the wall is pumped to the plant's evaporation ponds for treatment. Engineering for this system is not yet complete.

Project No: 76617415 Common Coal Belt On-Line Quality Analyzer

Company: 003
Location: 766

Project Information

Construction Start Date 4/1/2015 In Service Date Completion Date 09/30/15

List Interim In-Service Dates

Project Need Justification

The San Juan coal handling systems are antiquated and in need of significant modifications to address safety issues (e.g., control of combustible dust), obsolescence issues, performance issues, and consolidation following the decommissioning of two units. This project is part of several projects (see also 76616051, 76616120, 76616215, 76616415, 76617315, 76617415, 76628043) that will update the coal handling systems at San Juan. Dust control equipment and best practices in chute design have changed significantly since the coal handling systems were installed. Most of the original dust control equipment is no longer functioning. The presence of combustible dust is a hazard to both personnel and equipment. The existing reclaim systems do not support coal blending. The plant suffers from intermittent batches of poor quality coal. An on-line analyzer and blending capability will enable the plant to better manage poor coal quality. Air cannons are necessary for a safer means of addressing chute and silo pluggage. A manual method has been stopped because it was recognized an unsafe practice.

Project Alternatives

There alternative is the do-nothing approach. The proposed project is deemed to be the more attractive approach because it will enable the operator to better respond to poor fuel conditions in real-time.

Technical Aspects

Install a sensing device that can detect changes in coal quality. This will allow for better response to poor fuel conditions.

Project No: 76617432 RAW WATER RESERVIOR SLURRY WALL

Company: 003
Location: 766

Project Information

Construction Start Date | In Service Date | Completion Date 10/30/14 | Page 1

List Interim In-Service Dates

This project will be in service by December 31, 2015.

Project Need Justification

A Consent Decree has been issued to settle a lawsuit between PNM and the Sierra Club. This court order dictates improvements PNM shall implement to capture and treat ground water that flows under the San Juan Generating Station property. PNM is required to spend a minimum of $6 million on ground water related projects.

Project Alternatives

There are no alternatives. All aspects of the project as subject to the terms of the Consent Decree.

Technical Aspects

The raw water reservoir slurry is a simple well pump that discharges back into the plant reservoir.

Project No: 76617515 Common PBX Replacement and Backup Power

Company: 003
Location: 766

Project Information

Construction Start Date 1/1/2016 In Service Date Completion Date 07/30/16 Page 1

List Interim In-Service Dates

Project Need Justification

Routine major maintenance activities that meet the criteria for capitalization are necessary to keep site buildings, access ways, lighting and infrastructure in a safe and reliable condition. This project is part of several projects (76116328, 76116334, 76116335, 76416127, 76416128, 76516036, 76516117, 76516717, 76616231, 76616536, 76617515, 76116114, 76116331, 76117514, 76517524, 76616028, 76616054, 76616115, 76617915, and 76716220) that relate to building and structure maintenance requirments. These projects, include replacing roof systems that have had a normal life expectancy and require replacement due to the fact they are reaching the end of life, attending to aging coating systems (typically paint), designing and constructing access platforms to address safety issues, and purchasing scaffolding to reduce rental expense.

Project Alternatives

Building maintenance activities have no alternatives as long as the facilities are occupied and used for production. There is some discretion in the timing of these investments and typically they are arranged (when possible) in years when there are no planned outages as projects in non-outage years typically have less project management demands and lower capital funding requirements.

Technical Aspects

Replace the existing telephone switch (PBX system) with current technology and install a backup .

Project No: 76617615 Common Lake Station Switchgear

Company: 003
Location: 766

Project Information

Construction Start Date 1/1/2012 In Service Date Completion Date 07/30/15 Page 1

List Interim In-Service Dates

Project Need Justification

This project is part of a group of projects (76117614, 76117724, 76117749, 76416012, 76617615, 76616035) that address equipment obsolescence issues. Replacement of critical equipment is necessary to sustain unit reliability. The automatic voltage regulators, specifically, have deteriorating reliability and their poor performance can become a North America Electric Reliability Council (NERC) issue.

Project Alternatives

The alternative is to continue to maintain the existing equipment but this will become increasingly costly and difficult as replacement parts become harder to find.

Technical Aspects

In kind replacement of obsolete electrical equipment. The equipment replacements with be of similar design but with upgraded materials and solid state controls.

Project No: 76617715 Common River Station Pump Control Valve

Company: 003
Location: 766

Project Information

Construction Start Date 7/1/2015 In Service Date Completion Date 10/30/15 Page 1

List Interim In-Service Dates

Project Need Justification

Required maintenance that meets the criteria for capitalization.

Project Alternatives

No viable alternatives.

Technical Aspects

Valve and control instrumentation.

Project No: 76617724 Plant Common North Side Wastewater Product Line Replacement

Company: 003
Location: 766

Project Information

Construction Start Date | In Service Date | Completion Date 01/31/15

List Interim In-Service Dates

These projects will be in service on or before December 31, 2016

Project Need Justification

This project involves routine maintenance activities relating to the San Juan Generating Stations' piping systems that meet the criteria for capitalization.

Project Alternatives

Since these projects are maintenance necessary to sustain plant operations, there are no viable alternatives.

Technical Aspects

In kind replacement of 16" water line - approximately 700 feet. Some minor pipe routing changes may be made to facilitate installation and future maintenance.

Project No: 76617732 NERC-CIP ROCKWELL AUTOMATION ASSET CENTRE DEPLOYMENT

Company: 003
Location: 766

Project Information

Construction Start Date | In Service Date | Completion Date 08/30/14

List Interim In-Service Dates

These projects will be in service on or before December 31, 2014

Project Need Justification

This is part of a group of projects (group includes 76228122, 76616222, and 76617732) that is part of a plant wide program to replace aging and/or obsolete control devices (such as pistol grip switches and mechanical devices) with current state of the art devices (such as "soft" switches on computer screens and electronic transmitters). These upgrades allow a reduction in physical space for controls (moving from panel boards to computer screens), consistency in control device philosophy, easier troubleshooting, and greater system status information for the unit operators. Routine software upgrades are implement from time to time to address identified bugs and/or security issues. Self documenting software provides both control and communications of changes made in control logic.

Project Alternatives

The only alternative is the "do nothing" alternative. Existing systems can be maintained although with increasing difficulty, increasing expense and decreasing reliability due to obsolescence issues.

Technical Aspects

Install security software on Rockwell (Allen Bradley) Programmable Logic Controllers (PLC) to comply with NERC security standards

Project No: 76617815 Common NERC Firewall Upgrade

Company: 003
Location: 766

Project Information

Construction Start Date 9/1/2015 In Service Date Completion Date 05/30/16 Page 1

List Interim In-Service Dates

Project Need Justification

As an owner and operator of a Bulk Electric System (BES), PNM is required to comply with applicable standards from NERC. This project is one of several projects (76616046, 76616815, 76617115, 76617815, 76617932, 76628039, 76628042, 76628044, 76628047, 76628215, 76628315, 76628415, 76628045) relating to NERC compliance Many standards apply but most of these projects are aimed at compliance with the latest version of the NERC CIP (Critical Infrastructure Protection) standard. Firewalls and software updates are necessary to minimize the threat of cyber attacks or hacking into the control systems.

Project Alternatives

Some alternatives in the method of compliance are available but there are no alternative to complying with the standard. This specific project was selected because it was deemed the best option available to PNM to comply with NERC standards.

Technical Aspects

Replace aging firewall hardware devices and software with updated equipment and software.

Project No: 76617832 NERC-CIP FOXBORO I/A 8.6 SECURE A/D SERVER INSTALLATION

Company: 003
Location: 766

Project Information

Construction Start Date | In Service Date | Completion Date 08/31/14 | Page 1

List Interim In-Service Dates

These projects will be in service on or before December 31, 2014

Project Need Justification

These projects are part of a plant wide program to replace aging and/or obsolete control devices (such as pistol grip switches and mechanical devices) with current state of the art devices (such as "soft" switches on computer screens and electronic transmitters). These upgrades allow a reduction in physical space for controls (moving from panel boards to computer screens), consistency in control device philosophy, easier troubleshooting and greater system status information for the unit operators. Routine software upgrades are implement from time to time to address identified bugs and/or security issues. Self documenting software provides both control and communications of changes made in control logic.

Project Alternatives

The only alternative is the "do nothing" alternative. Existing systems can be maintained although with increasing difficulty, increasing expense and decreasing reliability due to obsolescence issues.

Technical Aspects

Install software and security enhancement to meet applicable NERC standards

Project No: 76617915 Common Scaffolding

Company: 003
Location: 766

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date 10/30/15 Page 1

List Interim In-Service Dates

Project Need Justification

Routine major maintenance activities that meet the criteria for capitalization are necessary to keep site buildings, access ways, lighting and infrastructure in a safe and reliable condition. This project is part of several projects (76116328, 76116334, 76116335, 76416127, 76416128, 76516036, 76516117, 76516717, 76616231, 76616536, 76617515, 76116114, 76116331, 76117514, 76517524, 76616028, 76616054, 76616115, 76617915, and 76716220) that relate to building and structure maintenance requirments. These projects, include replacing roof systems that have had a normal life expectancy and require replacement due to the fact they are reaching the end of life, attending to aging coating systems (typically paint), designing and constructing access platforms to address safety issues, and purchasing scaffolding to reduce rental expense.

Project Alternatives

Building maintenance activities have no alternatives as long as the facilities are occupied and used for production. There is some discretion in the timing of these investments and typically they are arranged (when possible) in years when there are no planned outages as projects in non-outage years typically have less project management demands and lower capital funding requirements.

Technical Aspects

Purchase scaffolding materials to reduce rental expense. caffolding is standard tube and coupler components.

Project No: 76617932 Plant Common NERC CIP Change Management System

Company: 003
Location: 766

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date 06/30/15 Page 1

List Interim In-Service Dates

Project Need Justification

As an owner and operator of a Bulk Electric System (BES), PNM is required to comply with applicable standards from NERC. This project is one of several projects (76616046, 76616815, 76617115, 76617815, 76617932, 76628039, 76628042, 76628044, 76628047, 76628215, 76628315, 76628415, 76628045) relating to NERC compliance Many standards apply but most of these projects are aimed at compliance with the latest version of the NERC CIP (Critical Infrastructure Protection) standard. The change management software will provide an easier and more highly reliable means of fulfilling the requirements of change management.

Project Alternatives

Some alternatives in the method of compliance are available but there are no alternative to complying with the standard. This specific project was selected because it was deemed the best option available to PNM to comply with NERC standards.

Technical Aspects

Purchase, install, and configure software which facilitates compliance with NERC change management standards.

Project No: 76628036 Plant Common Foxboro I/O and CP Replacement - Coal Handling

Company: 003
Location: 766

Project Information

Construction Start Date 1/1/2016 In Service Date Completion Date 11/30/16 Page 1

List Interim In-Service Dates

Project Need Justification

This projects is part of several projects (see 76117813, 76416019, 76516015, 76516215, 76617015, 76628036, 76628515, 76628634, 76716015) that address obsolesce issues in various local control systems. The original controls are mainly local panels with mechanical and electromechanical devices. They are being replaced with Programmable Logic Controllers (PLCs) which can be connected to the Distributed Control System (DCS). This enables monitoring and operation from the control room as well as locally. As with all microprocessor based systems, upgrades are required periodically, including replacement of Input/Output (I/O) circuit boards and Control Processors (CPs).

Project Alternatives

The alternative is to continue to maintain the existing equipment but this will become increasingly costly and difficult as replacement parts become harder to find.

Technical Aspects

Replace existing obsolete controls with state of the art electronic devices.

Project No: 76628039 Plant Common CAG Test Lab Equipment NERC

Company: 003
Location: 766

Project Information

Construction Start Date 4/1/2014 In Service Date Completion Date 06/30/15

List Interim In-Service Dates

Project Need Justification

As an owner and operator of a Bulk Electric System (BES), PNM is required to comply with applicable standards from NERC. This project is one of several projects (76616046, 76616815, 76617115, 76617815, 76617932, 76628039, 76628042, 76628044, 76628047, 76628215, 76628315, 76628415, 76628045) relating to NERC compliance Many standards apply but most of these projects are aimed at compliance with the latest version of the NERC CIP (Critical Infrastructure Protection) standard.

Project Alternatives

Some alternatives in the method of compliance are available but there are no alternative to complying with the standard. This specific project was selected because it was deemed the best option available to PNM to comply with NERC standards.

Technical Aspects

Purchase, install and test electrical devices for NERC compliance prior to introducing to operations. NERC requires compliance certification before new devices are deployed in the plant so a test lab is needed to demonstrate compliance and achieve certification.

Project No: 76628042 Plant Common AB/RS View Hardware/Licensing (Virtualization) NERC

Company: 003
Location: 766

Project Information

Construction Start Date 2/1/2014 In Service Date Completion Date 07/30/15 Page 1

List Interim In-Service Dates

Project Need Justification

As an owner and operator of a Bulk Electric System (BES), PNM is required to comply with applicable standards from NERC. This project is one of several projects (76616046, 76616815, 76617115, 76617815, 76617932, 76628039, 76628042, 76628044, 76628047, 76628215, 76628315, 76628415, 76628045) relating to NERC compliance Many standards apply but most of these projects are aimed at compliance with the latest version of the NERC CIP (Critical Infrastructure Protection) standard.

Project Alternatives

Some alternatives in the method of compliance are available but there are no alternative to complying with the standard. This specific project was selected because it was deemed the best option available to PNM to comply with NERC standards.

Technical Aspects

Purchase and install software which will make Allen Bradley programmable logic controllers compliant with NERC standards.

Project No: 76628044 Plant Common Multifactor Authentication NERC

Company: 003
Location: 766

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date 08/30/15

List Interim In-Service Dates

Project Need Justification

As an owner and operator of a Bulk Electric System (BES), PNM is required to comply with applicable standards from NERC. This project is one of several projects (76616046, 76616815, 76617115, 76617815, 76617932, 76628039, 76628042, 76628044, 76628047, 76628215, 76628315, 76628415, 76628045) relating to NERC compliance Many standards apply but most of these projects are aimed at compliance with the latest version of the NERC CIP (Critical Infrastructure Protection) standard.

Project Alternatives

Some alternatives in the method of compliance are available but there are no alternative to complying with the standard. This specific project was selected because it was deemed the best option available to PNM to comply with NERC standards.

Technical Aspects

Purchase and install software and/or recognition systems to enhance security of cyber assets. Multifactor authentication is a dual means of identification (password plus token, fingerprint, retinal scan, etc.) which allows only authorized personal to access control applications.

Project No: 76628045 Plant Common Physical Security NERC

Company: 003
Location: 766

Project Information

Construction Start Date | In Service Date | Completion Date 12/31/14 | Page 1

List Interim In-Service Dates

Unit 1 related projects will be in service on April 15, 2015. Unit 4 related projects will be in service on November 30, 2015

Project Need Justification

As an owner and operator of a Bulk Electric System (BES), PNM is required to comply with applicable standards from NERC. This project is one of several projects (76616046, 76616815, 76617115, 76617815, 76617932, 76628039, 76628042, 76628044, 76628047, 76628215, 76628315, 76628415, 76628045) relating to NERC compliance Many standards apply but most of these projects are aimed at compliance with the latest version of the NERC CIP (Critical Infrastructure Protection) standard.

Project Alternatives

Some alternatives in the method of compliance are available but there are no alternative to complying with the standard. This specific project was selected because it was deemed the best option available to PNM to comply with NERC standards.

Technical Aspects

Design and install access controls to limit physical entry into NERC secure areas. Physical security includes items such as access control devices (card readers and electronic locks) to prevent unauthorized entry inside Physical Security Perimeters (PSPs). Multifactor authentication is a dual means of identification (password plus token, fingerprint, retinal scan, etc.) which allows only authorized personal to access control applications.

Project No: 76628047 Foxboro I/A Version 8.8 Limestone / Coal NERC

Company: 003
Location: 766

Project Information

Construction Start Date 10/1/2014 In Service Date Completion Date 11/30/14

List Interim In-Service Dates

Project Need Justification

As an owner and operator of a Bulk Electric System (BES), PNM is required to comply with applicable standards from NERC. This project is one of several projects (76616046, 76616815, 76617115, 76617815, 76617932, 76628039, 76628042, 76628044, 76628047, 76628215, 76628315, 76628415, 76628045) relating to NERC compliance Many standards apply but most of these projects are aimed at compliance with the latest version of the NERC CIP (Critical Infrastructure Protection) standard.

Project Alternatives

Some alternatives in the method of compliance are available but there are no alternative to complying with the standard. This specific project was selected because it was deemed the best option available to PNM to comply with NERC standards.

Technical Aspects

Upgrade operating system software to latest (and most secure) release.

Project No: 76628066 Plant Common Limestone - Coal Handling DCS Self-Documenting Softw

Company: 003
Location: 766

Project Information

Construction Start Date 3/1/2015 In Service Date Completion Date 11/30/15

List Interim In-Service Dates

Project Need Justification

Improve efficiency in meeting NERC requirements.

Project Alternatives

No viable alternatives.

Technical Aspects

Software.

Project No: 76628215 Common NERC Malware Scanning KIOSK

Company: 003
Location: 766

Project Information

Construction Start Date 5/1/2015 In Service Date Completion Date 07/31/16 Page 1

List Interim In-Service Dates

Project Need Justification

As an owner and operator of a Bulk Electric System (BES), PNM is required to comply with applicable standards from NERC. This project is one of several projects (76616046, 76616815, 76617115, 76617815, 76617932, 76628039, 76628042, 76628044, 76628047, 76628215, 76628315, 76628415, 76628045) relating to NERC compliance Many standards apply but most of these projects are aimed at compliance with the latest version of the NERC CIP (Critical Infrastructure Protection) standard.

Project Alternatives

Some alternatives in the method of compliance are available but there are no alternative to complying with the standard. This specific project was selected because it was deemed the best option available to PNM to comply with NERC standards.

Technical Aspects

Install software to scan critical cyber assets for viruses.

Project No: 76628315 Common NERC Tripwire

Company: 003
Location: 766

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date 12/30/15 Page 1

List Interim In-Service Dates

Project Need Justification

As an owner and operator of a Bulk Electric System (BES), PNM is required to comply with applicable standards from NERC. This project is one of several projects (76616046, 76616815, 76617115, 76617815, 76617932, 76628039, 76628042, 76628044, 76628047, 76628215, 76628315, 76628415, 76628045) relating to NERC compliance Many standards apply but most of these projects are aimed at compliance with the latest version of the NERC CIP (Critical Infrastructure Protection) standard.

Project Alternatives

Some alternatives in the method of compliance are available but there are no alternative to complying with the standard. This specific project was selected because it was deemed the best option available to PNM to comply with NERC standards.

Technical Aspects

Install NERC compliant relays around generator protective circuits.

Project No: 76628415 Common NERC Add Vulnerability Module to SIEM

Company: 003
Location: 766

Project Information

Construction Start Date 4/1/2016 In Service Date Completion Date 10/30/16 Page 1

List Interim In-Service Dates

Project Need Justification

As an owner and operator of a Bulk Electric System (BES), PNM is required to comply with applicable standards from NERC. This project is one of several projects (76616046, 76616815, 76617115, 76617815, 76617932, 76628039, 76628042, 76628044, 76628047, 76628215, 76628315, 76628415, 76628045) relating to NERC compliance Many standards apply but most of these projects are aimed at compliance with the latest version of the NERC CIP (Critical Infrastructure Protection) standard.

Project Alternatives

Some alternatives in the method of compliance are available but there are no alternative to complying with the standard. This specific project was selected because it was deemed the best option available to PNM to comply with NERC standards.

Technical Aspects

Install software to address know vulnerabilities within certain computer operating systems.

Project No: 76628515 Common Connect CEM NETDAHS to PI Historian

Company: 003
Location: 766

Project Information

Construction Start Date 4/1/2016 In Service Date Completion Date 07/30/16

List Interim In-Service Dates

Project Need Justification

This projects is part of several projects (see 76117813, 76416019, 76516015, 76516215, 76617015, 76628036, 76628515, 76628634, 76716015) that address obsolesce issues in various local control systems. The original controls are mainly local panels with mechanical and electromechanical devices. They are being replaced with Programmable Logic Controllers (PLCs) which can be connected to the Distributed Control System (DCS). This enables monitoring and operation from the control room as well as locally. As with all microprocessor based systems, upgrades are required periodically, including replacement of Input/Output (I/O) circuit boards and Control Processors (CPs).

Project Alternatives

The alternative is to continue to maintain the existing equipment but this will become increasingly costly and difficult as replacement parts become harder to find.

Technical Aspects

Replace existing obsolete controls with state of the art electronic devices.

Project No: 76628634 Plant Common Foxboro Series 100 I/O and CP Replacement - Limeston

Company: 003
Location: 766

Project Information

Construction Start Date 1/1/2016 In Service Date Completion Date 11/30/16

List Interim In-Service Dates

Project Need Justification

This projects is part of several projects (see 76117813, 76416019, 76516015, 76516215, 76617015, 76628036, 76628515, 76628634, 76716015) that address obsolesce issues in various local control systems. The original controls are mainly local panels with mechanical and electromechanical devices. They are being replaced with Programmable Logic Controllers (PLCs) which can be connected to the Distributed Control System (DCS). This enables monitoring and operation from the control room as well as locally. As with all microprocessor based systems, upgrades are required periodically, including replacement of Input/Output (I/O) circuit boards and Control Processors (CPs).

Project Alternatives

The alternative is to continue to maintain the existing equipment but this will become increasingly costly and difficult as replacement parts become harder to find.

Technical Aspects

Replace existing obsolete controls with state of the art electronic devices.

Project No: 76630514 Common Laboratory Roof

Company: 003
Location: 766

Project Information

Construction Start Date | In Service Date | Completion Date 12/30/14 | Page 1

List Interim In-Service Dates

These projects will be in service on or before December 31, 2014

Project Need Justification

This project is part of a group of projects (group include 76116114, 76116331, 76630514, 76632413, 76616233, 76616234) that involves routine major maintenance activities that meet the criteria for capitalization and are necessary to keep site buildings, access ways, lighting, and infrastructure in a safe and reliable condition.

Project Alternatives

Building maintenance activities have no alternatives as long as the facilities are occupied and used for production. There is some discretion in the timing of these investments and typically they are arranged (when possible) in years when there are no planned outages. Non-outage years typically have less project management demands and lower capital funding requirements.

Technical Aspects

Replace failed roofing with fully adhered roofing system. Roof replacements include removal of the existing ballast and/or fully adhered waterproof membrane, insulation and decking (if necessary). Some of the original roofing systems used asbestos containing materials so abatement is necessary. The new roof systems are using a light weight concrete in lieu of aggregate ballast.

Project No: 76632413 San Juan Telecom Wiring

Company: 003
Location: 766

Project Information

Construction Start Date | In Service Date | Completion Date 04/15/14 | Page 1

List Interim In-Service Dates

These projects will be in service on or before December 31, 2014

Project Need Justification

This project is part of a group of projects (group include 76116114, 76116331, 76630514, 76632413, 76616233, 76616234) that involves routine major maintenance activities that meet the criteria for capitalization and are necessary to keep site buildings, access ways, lighting, and infrastructure in a safe and reliable condition.

Project Alternatives

Building maintenance activities have no alternatives as long as the facilities are occupied and used for production. There is some discretion in the timing of these investments and typically they are arranged (when possible) in years when there are no planned outages. Non-outage years typically have less project management demands and lower capital funding requirements.

Technical Aspects

Install voice and data wiring to support business communication needs in the San Juan Generating Station Administration Building

Project No: 76716015 Unit 3&4 Cooling Tower Chemical Feed Controls

Company: 003
Location: 767

Project Information

Construction Start Date | In Service Date | Completion Date 08/30/16 | Page 1

List Interim In-Service Dates

These systems will be in service by December 31, 2014

Project Need Justification

This project is part of a group of projects (group includes 76116714, 76117821, 76316532, 76416232, 76516072, 76617215, 76616311, 76717514, 76716015, 76617232) that addresses obsolesce issues in various local control systems. The original controls are mainly local panels with mechanical and electromechanical devices. They are being replaced with Programmable Logic Controllers (PLCs) which can be connected to the Distributed Control System (DCS). This will enable monitoring and operation from the control room as well as locally. As with all microprocessor based systems, upgrades are required periodically, including replacement of Input/Output (I/O) circuit boards and Control
Processors (CPs).

Project Alternatives

The alternative is to continue to maintain the existing equipment but this will become increasingly costly and difficult as replacement parts become harder to find.

Technical Aspects

Replace existing obsolete controls with state of the art electronic devices (e.g., circuit boards, wiring, processors, graphical interfaces and control logic programming)

Project No: 76716212 SJ U3&4 Tripper Deck Fire Protection

Company: 003
Location: 767

Project Information

Construction Start Date | In Service Date | Completion Date 08/30/14

List Interim In-Service Dates

All of these projects are in service as of October 31, 2014

Project Need Justification

This project is part of a group of projects (group include 76117619, 76216017, 76316314, 76416029, 76516013, 76716212) that incolves updating the fire protection systems at the San Juan Generating Station. Routine inspections of the fire protection systems are conducted by PNM's property insurance company. The insurer recommended installation of a check valve in each of the four turbine room fire protection systems. Fire protection systems on the tripper decks (the location where coal transfers from conveyor belts into storage silos) were determined to be inadequate and a complete overall was required.

Project Alternatives

There are no technical alternative to the check valve installation recommendation. The wet pipe fire suppression technology selected for the tripper decks was evaluated as being more reliable and less costly than dry pipe systems or foam systems.

Technical Aspects

Design and install a wet standpipe system in the areas where coal is transferred from conveyor belts into storage silos

Project No: 76716220 Units 3&4 Roof Refurbishment - 2014

Company: 003
Location: 767

Project Information

Construction Start Date | In Service Date | Completion Date 12/15/15 | Page 1

List Interim In-Service Dates

These projects complete at various times in 2014, 2015 and 2016 but mainly by December 31 of each year.

Project Need Justification

Routine major maintenance activities that meet the criteria for capitalization are necessary to keep site buildings, access ways, lighting and infrastructure in a safe and reliable condition. This project is part of several projects (76116328, 76116334, 76116335, 76416127, 76416128, 76516036, 76516117, 76516717, 76616231, 76616536, 76617515, 76116114, 76116331, 76117514, 76517524, 76616028, 76616054, 76616115, 76617915, and 76716220) that relate to building and structure maintenance requirments. These projects, include replacing roof systems that have had a normal life expectancy and require replacement due to the fact they are reaching the end of life, attending to aging coating systems (typically paint), designing and constructing access platforms to address safety issues, and purchasing scaffolding to reduce rental expense.

Project Alternatives

Building maintenance activities have no alternatives as long as the facilities are occupied and used for production. There is some discretion in the timing of these investments and typically they are arranged (when possible) in years when there are no planned outages as projects in non-outage years typically have less project management demands and lower capital funding requirements.

Technical Aspects

Replace failed roofing with fully adhered roofing system. Roof replacements include removal of the existing ballast and/or fully adhered waterproof membrane, insulation and decking (if necessary). Some of the original roofing systems used asbestos containing materials so abatement is necessary. The new roof systems are using a light weight concrete in lieu of aggregate ballast.

Project No: 76716314 U3&4 Sootblowing Air Compressor Mot

Company: 003
Location: 767

Project Information

Construction Start Date | In Service Date | Completion Date 03/01/14

List Interim In-Service Dates

These project will be in service on or before December 31, 2014

Project Need Justification

This project is part of a group of projects (group includes 76416414, 76416532, 76517321, 76716314) that addresses equipment obsolescence and/or equipment failure issues. Replacement of critical equipment is necessary to sustain unit reliability. This projects involves maintenance activities that meet the criteria for capitalization.

Project Alternatives

The alternative is to continue to maintain the existing equipment but this will become increasingly costly and difficult as replacement parts become harder to find.

Technical Aspects

In kind replacement of failed electrical motor. The replacements will be of similar design but with upgraded materials and solid state controls.

Project No: 76716510 SJ U3&4 HVAC Upgrade

Company: 003
Location: 765

Project Information

Construction Start Date 5/1/2010 In Service Date Completion Date 03/01/14

List Interim In-Service Dates

Project Need Justification

The current HVAC system is obsolete and not controlling properly to provide temperature control for the operator control rooms, relay, and DCS control cabinet areas.

Project Alternatives

Not replacing the controls will result in the overheating of this equipment and both of the existing compressors and Freon gas piping will need to be repaired/replaced prior to the 2014 summer run.

Technical Aspects

Replacement of existing cooling coils, installing over 600 LF of 6 chilled water (supply & return) lines, zone control dampers and new electronic control elements and controls for both heating and cooling.

Project No: 76717514 Units 3&4 Demineralizer Controls Replacement

Company: 003
Location: 767

Project Information

Construction Start Date | In Service Date | Completion Date 12/31/14 | Page 1

List Interim In-Service Dates

These systems will be in service by December 31, 2014

Project Need Justification

This project is part of a group of projects (group includes 76116714, 76117821, 76316532, 76416232, 76516072, 76617215, 76616311, 76717514, 76716015, 76617232) that addresses obsolesce issues in various local control systems. The original controls are mainly local panels with mechanical and electromechanical devices. They are being replaced with Programmable Logic Controllers (PLCs) which can be connected to the Distributed Control System (DCS). This will enable monitoring and operation from the control room as well as locally. As with all microprocessor based systems, upgrades are required periodically, including replacement of Input/Output (I/O) circuit boards and Control Processors (CPs).

Project Alternatives

The alternative is to continue to maintain the existing equipment but this will become increasingly costly and difficult as replacement parts become harder to find.

Technical Aspects

Replace existing obsolete controls with state of the art electronic devices (e.g., circuit boards, wiring, processors, graphical interfaces and control logic programming)

Project No: 76717523 SJ 5C Tripper Belt Replacement

Company: 003
Location: 767

Project Information

Construction Start Date | In Service Date | Completion Date 11/30/14

List Interim In-Service Dates

These project will be in service on or before December 31, 2014

Project Need Justification

The San Juan coal handling systems are antiquated and in need of significant modifications to address safety issues (including control of combustible dust), obsolescence issues, performance issues, and consolidation following the decommissioning of two units. Dust control equipment and best practices in chute design have changed significantly since the coal handling systems were first installed. Most of the original dust control equipment and conveyor bellts are no longer functioning and therefore must be replaced. The presence of combustible dust is a hazard to both personnel and equipment.

Project Alternatives

There is no alternative to addressing the issue of combustible dust. Various technologies will create technical alternatives but the issue must be addressed. Similarly, a non-manual method of addressing chute and silo pluggage must be implemented.

Technical Aspects

In kind replacement of coal conveyor belt

Project No: 76717913 UNITS 3&4 AUXILIARY COOLING TOWER PLENUM STRUCTUR

Company: 003
Location: 767

Project Information

Construction Start Date | In Service Date | Completion Date 12/31/14

List Interim In-Service Dates

The auxiliary cooling tower project will be in service on December 31, 2014.

Project Need Justification

This is one of several projects (see also 76116414, 76116914, 76117715, 76416212, 76117618, 76717913) relating to upgrading/maintaining the the circulating water systems that are comprised primarily of condensers and cooling towers. This system condenses steam leaving the turbine and exhauts the waste heat to the atmosphere. Major maintenance on these components can only occur during extended outage periods. Both San Juan Unit 1 and Unit 4 have 50 day planned outages in 2015. The duration of the outages allows maintenance activities which meet the criteria for capitalization to occur. Eddy current testing on both Unit 1 and Unit 4 condensers indicate accelerated instances of tube thinning. This is confirmed by the increasing rate of lost production due to condenser tube leaks. The Unit 1 cooling tower has significant deterioration in the fan deck and hot water basin. The deterioration is severe to the point it creates an unsafe condition for employees. Electrical equipment and the manholes through which cables are routed are also in need or replacement or reconstruction. The electrical loads currently exceed the short circuit rating of the circuit breakers. The auxiliary cooling tower has damaged and plugged drift eliminators which require replacement for the tower to function properly.

Project Alternatives

A tube for tube replacement approach has been selected for both condensers. The alternative approach is a modular replacement. The modular approach is roughly twice as costly but with only minimal additional benefit. There are no functional alternative to replacing the fan deck and hot water basin. The wood structures are deteriorated and unsafe. There are alternates for replacement material selection and the more durable fiberglass option has been selected.

Technical Aspects

The condenser tubes are being replaced with in-kind materials. The Unit 1 wooden fan deck, or top surface of the tower, is being replaced with fiberglass decking. The hot water basin is being rebuilt with in-kind materials. The Unit 1 existing electrical equipment and enclosure is being completely replaced with state of the art motor control centers, relays to control arc flash incident energy, and Replacement transformers with higher KVA ratings are included in the upgrades. The equipment will be housed in a modular container. The existing metal building is severely corroded and would need significant repairs if it were not being replaced. The drift eliminators on the auxiliary tower are being replaced with in-kind materials. In kind replace of drift eliminators.

Project No: 77916032 DISCONNECT SWITCH REPLACEMENT

Company: 003
Location: 779

Project Information

Construction Start Date | In Service Date | Completion Date 12/31/13 | Page 1

List Interim In-Service Dates

This equipment is in service.

Project Need Justification

This project involves routine maintenance activities at the San Juan Generating Station Switchyard. These maintenance activities are required to keep the plant operating at specifications and meet the criteria for capitalization.

Project Alternatives

Given the condition of the existing equipment, maintenance is not an alternative. A complete replacement is required.

Technical Aspects

In kind replacement of high voltage 3 phase electrical disconnect switch in the San Juan transmission substation

Project No: 77916110 SJ Four Corners Relay Upgrade

Company: 003
Location: 779

Project Information

Construction Start Date | In Service Date | Completion Date 12/01/14 | Page 1

List Interim In-Service Dates

These projects will be in service on or before December 31, 2014

Project Need Justification

This group of projects addresses equipment obsolescence issues and new standards for exposure to potential arc flash energy. Protective relay technology has moved from electromechanical devices to solid state devices. Electromechanical relays are becoming obsolete.

Project Alternatives

The existing electromechanical relays could continue to be maintained but the task will become increasingly difficult as parts become less available.

Technical Aspects

These projects are part of a multiyear program to replace electromechanical relays with solid state relays. The relays are located in all areas of the plant - each unit, common areas and the switchyard.

Project No: 77916136 RELAYS AND METERS

Company: 003
Location: 779

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date 12/31/16 Page 1

List Interim In-Service Dates

Project Need Justification

This project is part of a group of projects (see also 76116513, 76117733, 76117747, 76416134, 76616036, 77916136, 77917925, 76617132, 76416424) that addresses equipment obsolescence issues and new standards for exposure to potential arc flash energy. Protective relay technology has moved from electromechanical devices to solid state devices. Electromechanical relays are becoming obsolete. OSHA regulations regarding exposure to potential arc flash energy have become more stringent since the San Juan Plant was designed and constructed. Solid state relays can be used to control arc flash incident energy.

Project Alternatives

The existing electromechanical relays could continue to be maintained but the task will become increasingly difficult as parts become less available. The alternative for compliance with arc flash exposure standards is personal protective equipment for employees assigned to task where arc flash exposure occurs.

Technical Aspects

Replace obsolete electromechanical relays with solid state devices. This project is part of a multiyear program to replace electromechanical relays with solid state relays. The relays are located in all areas of the plant - each unit, common areas and the switchyard.

Project No: 77916332 YARD LIGHTING IMPROVEMENTS

Company: 003
Location: 779

Project Information

Construction Start Date | In Service Date | Completion Date 03/18/14 | Page 1

List Interim In-Service Dates

This equipment is in service.

Project Need Justification

This project involves routine maintenance activities at the San Juan Generating Station Switchyard. These maintenance activities are required to keep the plant operating at specifications and meet the criteria for capitalization.

Project Alternatives

Given the condition of the existing equipment, maintenance is not an alternative. A complete replacement is required.

Technical Aspects

In kind replacement of area lighting in the San Juan transmission substation yard

Project No: 77917723 SJ Switchyard Relays/Meters/Instrs-2013

Company: 003
Location: 779

Project Information

Construction Start Date | In Service Date | Completion Date 10/01/14 | Page 1

List Interim In-Service Dates

These projects will be in service on or before December 31, 2014

Project Need Justification

"This project is part of a group of projects (group includes 76116051, 76616133, 76616520, 77917723, 77917824) that address equipment obsolescence issues and new standards for exposure to potential arc flash energy. Protective relay technology has moved from electromechanical devices to solid state devices and electromechanical relays are becoming obsolete. OSHA regulations regarding exposure to potential arc flash energy have become more stringent since the San Juan Plant was designed and constructed. Solid state relays can be used to control arc flash incident energy. These projects are part of a multiyear program to replace electromechanical relays with solid state relays. The relays are located in all areas of the plant - each unit, common areas and the switchyard."

Project Alternatives

The existing electromechanical relays could continue to be maintained but the task will become increasingly difficult as parts become less available. The alternative for compliance with arc flash exposure standards is personal protective equipment for employees assigned to task where arc flash exposure occurs.

Technical Aspects

Replace obsolete electromechanical relays with solid state devices. The relays are located in all areas of the plant - each unit, common areas and the switchyard.

Project No: 77917824 SJ Switchyard Relays/Meters/Intrs-2014

Company: 003
Location: 779

Project Information

Construction Start Date | In Service Date | Completion Date 12/31/14 | Page 1

List Interim In-Service Dates

These projects will be in service on or before December 31, 2014

Project Need Justification

"This project is part of a group of projects (group includes 76116051, 76616133, 76616520, 77917723, 77917824) that address equipment obsolescence issues and new standards for exposure to potential arc flash energy. Protective relay technology has moved from electromechanical devices to solid state devices and electromechanical relays are becoming obsolete. OSHA regulations regarding exposure to potential arc flash energy have become more stringent since the San Juan Plant was designed and constructed. Solid state relays can be used to control arc flash incident energy. These projects are part of a multiyear program to replace electromechanical relays with solid state relays. The relays are located in all areas of the plant - each unit, common areas and the switchyard."

Project Alternatives

The existing electromechanical relays could continue to be maintained but the task will become increasingly difficult as parts become less available. The alternative for compliance with arc flash exposure standards is personal protective equipment for employees assigned to task where arc flash exposure occurs.

Technical Aspects

Replace obsolete electromechanical relays with solid state devices. The relays are located in all areas of the plant - each unit, common areas and the switchyard.

Project No: 77917925 SJ Switchyard Relays/Meters/Instrs-2015

Company: 003
Location: 779

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date 12/02/15 Page 1

List Interim In-Service Dates

Project Need Justification

This project is part of a group of projects (see also 76116513, 76117733, 76117747, 76416134, 76616036, 77916136, 77917925, 76617132, 76416424) that addresses equipment obsolescence issues and new standards for exposure to potential arc flash energy. Protective relay technology has moved from electromechanical devices to solid state devices. Electromechanical relays are becoming obsolete. OSHA regulations regarding exposure to potential arc flash energy have become more stringent since the San Juan Plant was designed and constructed. Solid state relays can be used to control arc flash incident energy.

Project Alternatives

The existing electromechanical relays could continue to be maintained but the task will become increasingly difficult as parts become less available. The alternative for compliance with arc flash exposure standards is personal protective equipment for employees assigned to task where arc flash exposure occurs.

Technical Aspects

Replace obsolete electromechanical relays with solid state devices. This project is part of a multiyear program to replace electromechanical relays with solid state relays. The relays are located in all areas of the plant - each unit, common areas and the switchyard.

Project Type: 12-Peaking Generation

Project No: 75218816 MW natural gas peaker 2016 COD

Company: 003
Location: 752

Project Information

Construction Start Date 7/15/2014 In Service Date Completion Date 12/31/15 Page 1

List Interim In-Service Dates

Project Need Justification

PNM's most recent load and resource projections show that PNM current infrastructure may not support the summer 2016 system peak. To assure its ability to continue to provide reliable electric service, a new generation plant is needed to serve peak load and reserve margin in the Path 48 transmission area and to support intermittent renewable resources.

Project Alternatives

Although the reciprocating engines provided many characteristics required to meet PNMs requirements, this alternative technology was eliminated due to the uncertainty of the technology and the cost associated with the staff required for on-going maintenance and other factors.

Technical Aspects

40MW LM6000 provides fast start capability, can be remotely operated, has low maintenance costs, minimum staffing and is a familiar technology.

Project Type: 13-Delta/Rio Bravo

Project No: 04616014 Vertical Ladder Upgrade

Company: 003
Location: 046

Project Information

Construction Start Date 1/1/2014 In Service Date Completion Date 11/30/14 Page 1

List Interim In-Service Dates

Project Need Justification

In order to improve safety for working on platforms vertical ladders need to be replace with stairways and platforms. In areas where stairways are not feasible vertical ladders will be equipped with safety gates and harness guides where required.

Project Alternatives

Do nothing alternative is not a viable option. This option may raise the potential for climbing accidents. No other option evaluated except the recommended option.

Technical Aspects

Each vertical ladder and platform will be evaluated and the best solution will be implemented.

Project No: 04616015 DCS Upgrade for remote units

Company: 003
Location: 046

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date 06/30/15 Page 1

List Interim In-Service Dates

Project Need Justification

The remote DCS systems at Rio Bravo are obsolete and will be replaced because they are no longer supported by the manufacture.

Project Alternatives

The do nothing option is not a viable option because the systems need to be replaced. No other options were analyzed because the recommended option is the only viable option.

Technical Aspects

DCS systems will be replaced by the manufacture's recommended systems to minimize labor costs by utilizing existing wiring.

Project No: 04616114 Arc flash For Delta

Company: 003
Location: 046

Project Information

Construction Start Date 1/1/2014 In Service Date Completion Date 11/30/14 Page 1

List Interim In-Service Dates

Project Need Justification

An arc flash study is required by Electric Safety Code to identify arc flash boundaries and safe working distances while working on electrical equipment. In addition, in order to minimize the risk of arc flash accidents remote racking devices will be installed.

Project Alternatives

Do nothing option is not feasible. Electric Safety Code requires and arch flash study be performed to identify arc flash boundaries and safe working distances while working on electrical equipment.

Technical Aspects

Arc flash study will be performed and then remote racking devices will be installed.

Project No: 04616115 Mark VI e upgrade

Company: 003
Location: 046

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date 10/30/15 Page 1

List Interim In-Service Dates

Project Need Justification

The current Mark V system, which is the electronic control system for the Rio Bravo Combustion Turbine, will no longer be supported by GE. The current control system will be replaced with a Mark VI e control system.

Project Alternatives

The do nothing option is not feasible. We considered the option of replacing the Mark V with a non GE system but this approach creates a technical risk because GE will no longer guarantee implementation of TILs if a non-GE control system is used.

Technical Aspects

The new Mark System will be purchased and installed by GE.

Project No: 04616214 NERC CIP

Company: 003
Location: 046

Project Information

Construction Start Date 1/1/2014 In Service Date Completion Date 12/31/14 Page 1

List Interim In-Service Dates

Project Need Justification

New NERC CIP Standards may require better access control, firewall integrity, inventory listing, cyber security patching and virus scans of all windows plant based control systems. In addition, NERC CIP Standard plans will need to be developed and implemented for Reeves.

Project Alternatives

A do nothing option is not viable. NERC will require improvements be made to the cyber security to the plant control systems.

Technical Aspects

RBG will coordinate efforts with San Juan to ensure minimum requirements are implemented per NERC CIP requirements.

Project No: 04616215 Rio Bravo Demineralized Water Unit

Company: 003
Location: 046

Project Information

Construction Start Date 2/2/2015 In Service Date Completion Date 11/30/15

List Interim In-Service Dates

Project Need Justification

The demineralizer will provide the necessary combustion turbine water needed to ensure 100 hour full load run on fuel oil at Rio Bravo. Presently the available water supply only allows for a 33 hour run at full load.

Project Alternatives

Other alternatives include a installing a new storage tank and more water conditioning trailers.

Technical Aspects

Work with GE to ensure the quality of water provided for the combustion turbine meets minimum requirements.

Project No: 04616314 CEMs Cisco

Company: 003
Location: 046

Project Information

Construction Start Date 5/1/2014 In Service Date Completion Date 12/31/14

List Interim In-Service Dates

Project Need Justification

The RBG CEMs system is becoming obsolete and not the standard PNM reporting software. This upgrade will improve efficiency and allow remote access to monitor remote assets.

Project Alternatives

The upgrade is required to maintain a supported system. Only alternative is to run on current system, which would result in security and reliability risks.

Technical Aspects

PC hardware will be replaced. New B&W reporting software will be installed to match other PNM's reporting software.

Project No: 04616414 Co2 Fire system Upgrade

Company: 003
Location: 046

Project Information

Construction Start Date 1/1/2014 In Service Date Completion Date 11/30/14 Page 1

List Interim In-Service Dates

Project Need Justification

Existing CO2 fire system supply regulators and isolation valves need to be replace and re-engineering so that sub-systems can be isolated. The current arrangement is a safety concern. In addition, new platforms and stairways need to be installed to provide safe access.

Project Alternatives

The do nothing option is not feasible. No other options were considered.

Technical Aspects

Replace CO2 fire system supply valves, headers and install new platforms and stairways to provide safe access.

Project No: 04616514 Replace Batteries

Company: 003
Location: 046

Project Information

Construction Start Date 9/1/2014 In Service Date Completion Date 11/30/14

List Interim In-Service Dates

Project Need Justification

The RBG control batteries need to be replaced. The batteries have exceeded their remaining life.

Project Alternatives

Do nothing option in not feasible. No other option was considered because the batteries have exceeded their life.

Technical Aspects

Batteries will be ordered and installed by the battery vendor.

Project No: 04616614 Aux Transformer Install or Diesel Gen

Company: 003
Location: 046

Project Information

Construction Start Date 5/1/2014 In Service Date Completion Date 12/31/14 Page 1

List Interim In-Service Dates

Project Need Justification

Electrical power is provided to the plant utilizing RBG's GSU transformer. In the event the transformer is taken out of service or there is a loss of power, the plant will go into the dark. In this situation the H2 in the generator is vented and it takes about two days to refill. This makes the unit unavailable for two days. In addition, it is verify difficult to perform maintenance on the GSU transformer.

Project Alternatives

A do nothing option is not feasible. Two options will be evaluated. One option involves the installation of an emergency generator and the other option involves an a em

Technical Aspects

A day outage is required to make cut over to emergency backup system.

Project No: 04616714 Remote HMI for Reeves to Operate Delta

Company: 003
Location: 046

Project Information

Construction Start Date 5/1/2014 In Service Date Completion Date 10/31/14 Page 1

List Interim In-Service Dates

Project Need Justification

RBG will not be staffed and currently has the ability for remote start. The remote start package does not provide alarming capability. Installing a remote Human Machine Interface (HMI)at Reeves provides the ability for the Reeves operator to visually monitor all plant alarms and dispatch maintenance personnel to repair issues as the arise. This will enhance the availability of the unit and will minimize current staffing levels.

Project Alternatives

The do nothing option is not feasible. The only other option is to increase staffing levels which is not cost effective.

Technical Aspects

The remote HMI will be installed at Reeves. The communication network will be provided by PNM communication's department which recently been installed new fiber optics at RBG that interface with PNM's switch yard control house.

Project No: 04616914 HVAC Installation

Company: 003
Location: 046

Project Information

Construction Start Date 1/1/2014 In Service Date Completion Date 10/31/14 Page 1

List Interim In-Service Dates

Project Need Justification

There is no cooling (i.e., air conditioning) in maintenance shop. Working conditions in the shop become uncomfortably warm in the warm weather season impacting worker safety and productivity.

Project Alternatives

Do nothing option is not feasible. The option of relocating the shop was considered but was not deemed cost effective.

Technical Aspects

AC evaporative cooler will be purchase and installed by vendor.

Project No: 04621014 Delta Plant Purchase (6)

Company: 003
Location: 046

Project Information

Construction Start Date 11/1/2012 In Service Date Completion Date 07/31/14 Page 1

List Interim In-Service Dates

Project Need Justification

PNM expects the annual capacity factor of the Delta-Person facility to increase from 1 percent to between 4 and 10 percent depending on loads and market conditions. Additionally, PNM expects retail customers to benefit from a net retail FPPCAC savings of at least $100,000 per year with a potential of significantly greater savings.

Project Alternatives

None

Technical Aspects

> The CCN filing process was started early in the acquisition process, and is ongoing.
> PNM will not proceed with the acquisition unless satisfactory NMPRC approval is received; if satisfactory approval is not received, PNM is not obligated to proceed withthe purchase.
> The PPA would continue under the current ownership.

Project Type: 14-Bulk Power Building

Project No: 35730513 Aztec ADA Door

Company: 003
Location: 357

Project Information

Construction Start Date 3/18/2013 In Service Date Completion Date 07/01/14

List Interim In-Service Dates

Project Need Justification

This project is to install automatic door openers at the Aztec facility's south entrance doors (openers will be installed both inside and outside). The installation of these door openers is necessary to meet local ADA code.

Project Alternatives

There are no alternatives to not upgrading this door to local ADA code requirements.

Technical Aspects

An electronic door opener will be installed on the inside and outside of the entrance doors.

Project No: 35730515 Aztec Security Equipment Upgrades

Company: 003
Location: 357

Project Information

Construction Start Date 6/1/2015 In Service Date Completion Date 08/30/15 Page 1

List Interim In-Service Dates

Project Need Justification

This project is a wedge/placeholder in the 2015 budget for possible building security system improvements. Technical aspects of the proposed project include purchase and installation of security cameras for the Aztec office building. This project will also add additional security card readers to areas that fall under NERC CIP 006-5 guidelines. These proposed improvements will increase safety and security for the building occupants and meet NERC CIP standards.

Project Alternatives

Some of the improvements in this project are required to meet NERC compliance. This project improves safety and security as needed to assure a adequate monitoring of the facility.

Technical Aspects

This project includes purchase of security cameras and security card readers that will be installed on perimeter doors.

Project No: 35730615 Aztec & Data Center Building Improvements

Company: 003
Location: 357

Project Information

Construction Start Date 4/1/2015 In Service Date Completion Date 12/31/19 Page 1

List Interim In-Service Dates

Project Need Justification

For 2015, this project includes replacement of asphalt and the roof, as well as the building automation system for the Aztec office building. The asphalt in the parking lot is used by 200+ building occupants on a daily basis and is worn and broken in areas. This could prevent a safety hazard when weather conditions allow ice and water to enter the asphalt. The building automation system is past its useful life and in need of replacement instead of breakdown maintenance. This replacement will provide a safe work environment for building occupants and provide remote monitoring and control from Downtown Albuquerque Headquarters.

Project Alternatives

The alternative to this project is 1) to continue to patch and monitor the parking lot asphalt for needed repairs, and 2) continue to receive service calls at the Downtown facility from building occupants when the temperature varies too high or low, and 3) have Downtown personnel visit the Aztec building to monitor the system.

Technical Aspects

The technical aspects include the roof replacement and he upgrade of the building automation system.

Project No: 35731014 Aztec Chiller Replacement

Company: 003
Location: 357

Project Information

Construction Start Date 3/21/2014 In Service Date Completion Date 09/30/14 Page 1

List Interim In-Service Dates

Project Need Justification

This project encompasses replacement of the original building's chiller system. The current system is less efficient and approaching the end of its useful life. In addition, the current system requires ongoing O&M expense and adjustments to maintain an acceptable building environment.

Project Alternatives

The alternative is to try to find parts to an outdated system and perform repairs as breakdowns occur.

Technical Aspects

The current chiller system will be replaced with a standalone system in the rear of the building that will be installed on a concrete pad.

Project No: 35732012 Aztec Building Renovations

Company: 003
Location: 357

Project Information

Construction Start Date 7/6/2012 In Service Date Completion Date 10/29/13 Page 1

List Interim In-Service Dates

Project Need Justification

This project is intended to remodel the majority of the empty Aztec office building. It had many offices, was broken up, and cannot accommodate the approximately 150 people who will move from the Downtown Corporate Headquarters when the Alvarado Square facility is vacated at the end of 2012. The remodel will allow for space standards to be implemented (same as Downtown) and allow ergonomic furniture to be installed. Additionally, the Downtown complex (AS and HQ facilities) is being consolidated to just the HQ building (a reduction of more than 212,000 sq. ft) and is also being remodeled to accommodate an increased number of occupants.

Project Alternatives

The alternatives include:

1) Lease space in another location. This may involve increased costs and commit PNM to additional expense.
2) Utilize the Aztec building in its current condition. This option would not allow the number of workspaces required by the various business units. This could cause decreased morale, poor HVAC movement, and decreased space for future expansion of staff.
3) Decrease the space standards for Downtown. This would still not accommodate the additional staff being moved.

Technical Aspects

Interior improvements will include moving some walls, replacing flooring, purchasing and installing modular work stations, updating of lighting and adding of one-stall restrooms to meet ADA requirements.

Project No: 35732014 Aztec Bike Cage

Company: 003
Location: 357

Project Information

Construction Start Date 3/24/2014 In Service Date Completion Date 09/25/14 Page 1

List Interim In-Service Dates

Project Need Justification

The limited secure bicycle storage capacity at Aztec is not adequate for the number of employees that ride their bike to work. This project will double the current capacity and eliminate the need for employees to bring their bikes into the building for secure storage.

Project Alternatives

The alternative is to have employees bring their bicycles inside the building and store them outside their office or cubicle. This would create a safety hazard and would also result in additional dirt being brought into the building.

Technical Aspects

A metal bike cage will be purchased and installed next to the current cage.

Project No: 35732414 Aztec Office Bldg Videoconferencing

Company: 003
Location: 357

Project Information

Construction Start Date 4/9/2014 In Service Date Completion Date 08/29/14 Page 1

List Interim In-Service Dates

Project Need Justification

This project will provide videoconferencing capabilities which are not available at this time. The videoconferencing will be used for safety meetings, training, interviews, and meetings where visual is needed and travel is not necessary or cost-effective. This videoconferencing will be used in communicating with northern and southern NM and Texas facilities.

Project Alternatives

The alternative is to have a telephone meeting (no visual available) or to travel to the meeting. Both options are either not cost beneficial or ineffective depending on the content of the meeting

Technical Aspects

Videoconferencing equipment including telephones, monitors, cameras, and microphones will be installed.

Project No: 75518015 Utility Scale Solar 40 MW

Company: 003
Location: 755

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date 12/31/15 Page 1

List Interim In-Service Dates

Project Need Justification

PNM needs to add solar resources to meet its required Renewable Portfolio Standards (RPS). The Renewable Energy Credits (REC) from these facilities are required to meet the projected RPS quantity requirements.

Project Alternatives

PNM evaluated several options for meeting required RPS standards, including solar, wind, purchasing Renewable Energy Credits (RECs), etc. The company's analysis and financial models indicated solar as the best option for meeting required portfolio requirements.

Technical Aspects

40MW, single axis solar trackers split between 4-5 sites in PNM distribution territory. Connect directly to PNM distribution lines to avoid timely and costly interconnection to high-voltage transmission lines. Sites to be disbursed in PNM’s service territory and in Path 48 for system performance and diversity.

Project Type: 16-PNM South Distribution

Project No: 15001712 Alamorgordo Bird Guard

Company: 034
Location: 150

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

04-2015, 07-2015, 10-2015, 12-2015. Quarterly clearings occur every year thereafter.

Project Need Justification

PNM has identified bird laws as areas of potential regulatory vulnerability for the company. This project demonstrates a good faith effort to protect birds and thereby limits corporate liability from prosecution under the Migratory Bird Treaty Act (MBTA) and other bird laws. Violations of the MBTA and other bird laws constitutes a significant liability for utilities. Additionally, over time the project will result in fewer outages and increased customer satisfaction. It will also positively affect PNM stakeholders concerned with bird and wildlife issues.

Project Alternatives

None

Technical Aspects

The different projects identified provide for the installation of protective covers over insulators, wires, transformer bushings, switch covers and other equipment in areas known to be inhabited/frequented by birds protected under the Migratory Bird Treaty Act to reduce the hazard of an electrocution hazard.

Project No: 15002214 MD#1 Transformer Upgrade

Company: 034
Location: 150

Project Information

Construction Start Date 1/1/2018 In Service Date Completion Date 05/15/16 Page 1

List Interim In-Service Dates

Na

Project Need Justification

Project Need is for contingency loss of facilities. We would not be able to restore 100% of the Alamogordo loads in less than 12 hours for area transformer outages.

Project Alternatives

none

Technical Aspects

Install a new 41.6 MVA transformer and a four feeder switchgear with a tie breaker (3000A) at the existing Alamogordo Substation.

Project No: 15003010 SNM Substation Equip Repl

Company: 034
Location: 150

Project Information

Construction Start Date 1/1/2012 In Service Date Completion Date N/A

List Interim In-Service Dates

Na

Project Need Justification

This blanket project includes small capital expenditures for equipment replacement or improvement. Alternatives are assessed at WO level.

Project Alternatives

Alternatives are assessed at WO level.

Technical Aspects

This blanket project may be used for replacement of station batteries, lightning arrestors, transformer bushings and upgrades to substation relay protection system.

Project Need Justification

This project provides discretionary funds for the Communications Supervisor to replace or upgrade ageing or obsolete Communications Equipment on PNM's electric distribution system in southern New Mexico. These projects are typically small projects that would require little or no engineering support. Some examples would be replacing or upgrading SCADA (Supervisory Control And Data Acquisition) Remote Terminal Units or radios, upgrading SCADA switch controllers and related equipment as well as replacing or upgrading microwave radio equipment, upgrading or replacing remote site air conditioning units, needed to keep the equipment for overheating, upgrading remote site generators, replacing or upgrading communications site batteries, upgrading communications system monitoring at remote sites. This project covers upgrades and system replacements for both the distribution system and the transmission system in southern New Mexico. The funds cover material costs, and the related labor costs to replace and or upgrade obsolete or failed equipment.

Project Alternatives

The alternative to providing discretionary funding for Supervisory management of small projects would be to have all system equipment upgrades and replacement of obsolete equipment, regardless of scope, go through the same process for all of the capital projects, which would dramatically reduce the ability to address critical upgrades and replacement of failed or obsolete communication equipment.

Technical Aspects

The technical aspects of this project involve subject matter expert (supervisor) identifying critical communications equipment in the southern part of the state that is in need of replacement or upgrade to to obsolesence, ordering the material and coordinating work to accomplish the upgrade or repair of the component. The projects vary depending upon need, but cover the range of work described in the justification section above.

Project No: 15030515 General Service Wedge Co34

Company: 034
Location: 150

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date 12/31/19 Page 1

List Interim In-Service Dates

N/A

Project Need Justification

This project is a wedge account. As General Services' Building Improvement projects are identified they will be justified and a separate project number will be created.

Project Alternatives

None

Technical Aspects

This project, and ultimately the specific projects that will be assigned within it, will involve building improvements.

Project No: 15034007 Tools & Equipment

Company: 034
Location: 150

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

04-2015, 07-2015, 10-2015, 12-2015. Quarterly clearings occur every year thereafter.

Project Need Justification

This Blanket project is necessary to purchase required equipment for the Engineering Department in order to replace defective equipment, purchase additional safety equipment, as well as equipment that will increased department productivity.

Project Alternatives

This Blanket Improvement Authorization will have multiple work orders each representing small capital tool replacements. The only alternative is to not replace defective equipment or purchase additional security equipment. PNM does not believe the "do-nothing" approach is a legitimate option.

Technical Aspects

This Blanket Improvement Authorization will have multiple work orders with each representing small capital equipment replacements such as recording devices for power/voltage monitoring, surveying equipment for engineering of Power lines for construction, etc.

Project No: 15100107 Line Extension - Residential

Company: 034
Location: 151

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

01-15,02-15,03-15,04-15,05-15,06-15,07-15,08-15,09-15,10-15,11-15,12-15. Monthly clearings occur every year thereafter.

Project Need Justification

This Blanket project includes capital expenditures relating to providing services to new residential customers and to respond to increased load from existing residential customers.

Project Alternatives

None - this project is necessary to meet customer load.

Technical Aspects

This project involves building new overhead or underground distribution lines to serve new and existing residential customers.

Project No: 15100207 Line Extension - Commercial

Company: 034
Location: 151

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

01-15,02-15,03-15,04-15,05-15,06-15,07-15,08-15,09-15,10-15,11-15,12-15. Monthly clearings occur every year thereafter.

Project Need Justification

This Blanket project includes capital expenditures relating to proving services to new commercial customers and responding to increased load from existing commercial customers.

Project Alternatives

None - this project is necessary to meet customer load.

Technical Aspects

Involves line extensions including the design and installation of electric distribution facilities including conduit systems cable, wire, poles, OH/UG switches, transformers, protection equipment, and metering.

Project No: 15100507 Lighting

Company: 034
Location: 151

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

01-15,02-15,03-15,04-15,05-15,06-15,07-15,08-15,09-15,10-15,11-15,12-15. Monthly clearings occur every year thereafter.

Project Need Justification

This Blanket project includes capital expenditures for the installation of street lights and the removal of customer area lights in the Alamogordo Services District.

Project Alternatives

None

Technical Aspects

Install street lighting poles and lighting, wiring, transformers, and ancillary lighting equipment.

Project No: 15100607 ED Remove & Replace

Company: 034
Location: 151

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

01-15,02-15,03-15,04-15,05-15,06-15,07-15,08-15,09-15,10-15,11-15,12-15. Monthly clearings occur every year thereafter.

Project Need Justification

This project is necessary to support the removal and relocation of electric distribution facilities that are customer driven and that may or may not be paid for by the customer.

Project Alternatives

None - Mandatory

Technical Aspects

Remove/relocate electric distribution facilities. Technical aspects will vary by individual customer/system needs.

Project No: 15100707 ED System Improvements

Company: 034
Location: 151

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

01-15,02-15,03-15,04-15,05-15,06-15,07-15,08-15,09-15,10-15,11-15,12-15. Monthly clearings occur every year thereafter.

Project Need Justification

This project entails upgrading existing electric distribution facilities to increase load serving capability, provide voltage support, enhance system protection, and increase system reliability.

Project Alternatives

None - this project is necessary to ensure system stability and reliability.

Technical Aspects

Upgrades to existing electric distribution facilities including the design and installation of conduit systems cable, wire, poles, OH/UG switches, transformers, protection equipment, and metering.

Project No: 15100807 Services

Company: 034
Location: 151

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A Page 1

List Interim In-Service Dates

04-2015, 07-2015, 10-2015, 12-2015. Quarterly clearings occur every year thereafter.

Project Need Justification

Project expenditures are for the installation of conductors and equipment necessary in providing electrical service to residential, commercial, and industrial customers.

Project Alternatives

None - project is necessary to serve PNM customers.

Technical Aspects

The project includes the costs of engineering, inspections, materials, and installation of service wires and equipment for providing electrical service to residential, commercial, and industrial customers.

Project No: 15100907 Transformers

Company: 034
Location: 151

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

01-15,02-15,03-15,04-15,05-15,06-15,07-15,08-15,09-15,10-15,11-15,12-15. Monthly clearings occur every year thereafter.

Project Need Justification

This Blanket project is related to the purchase and installation of transformers required in serving new customer loads and for outage restorations from failed transformers.

Project Alternatives

None - Mandatory

Technical Aspects

The project is for the purchase of transformers that are necessary to reduce primary distribution voltage levels to a usable level required of residential and business customers. The transformers purchased to be installed to provide service to new customers and to replace existing transformers that have failed for restoration of customer electrical services.

Project No: 15101007 Meter Equipment

Company: 034
Location: 151

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

04-2015, 07-2015, 10-2015, 12-2015. Quarterly clearings occur every year thereafter.

Project Need Justification

This project entails meter purchases required for normal work activities (e.g., new service, maintenance), retirement of meters (planned and unplanned due to damage, Rule 560 requirements), and replacement of meters (due to failure of Rule 560 sample testing)

Project Alternatives

None - Mandatory

Technical Aspects

PNM will be purchasing both single and three phase solid state meters. Some of these new meters will have remote communication capabilities.

Project No: 15101207 Pole Replacement

Company: 034
Location: 151

Project Information

Construction Start Date 3/1/2016 In Service Date Completion Date N/A

List Interim In-Service Dates

04-16,05-16,06-16,07-16,08-16,09-16,10-16,11-16,12-16. Monthly clearings occur every year thereafter.
Note the above interim in-service dates will be different, quarterly for pole replacement.

Project Need Justification

NMPRC regulations state that PNM shall keep the electric infrastructure in good repair based on industry standards. This capital blanket assures that intrastate distribution poles are replaced or reinforced based on ground line testing results. This project will also improve safety for the field crews that climb the poles by systematically testing poles and replacing or repairing defective poles.

Project Alternatives

None - Mandatory

Technical Aspects

This project involves performing ground line testing of distribution poles and repairing/replacing those that fail to meet standards.

Project No: 15101307 Cable Replacement

Company: 034
Location: 151

Project Information

Construction Start Date 1/1/2016 In Service Date Completion Date N/A

List Interim In-Service Dates

Project Need Justification

This project involves replacing underground cable in accordance with cable assessment results and replacement criteria. The risk of not replacing cable includes the potential for additional extended power outages and an adverse effect on reliability.

Project Alternatives

An alternative to replacing cable is to repair cable. This alternative was not chosen as it is a temporary fix only.

Technical Aspects

PNM personnel will perform a cable assessment and based on these results and published cable replacement criteria, it will remove/abandon and replace 1/0, 4/0, and 750 cable as appropriate.

Project No: 15101614 Alamogordo Feeder 12-12 Reconductor

Company: 034
Location: 151

Project Information

Construction Start Date 1/1/2014 In Service Date Completion Date 12/31/14 Page 1

List Interim In-Service Dates

na

Project Need Justification

This project necessary to mitigate overloads under contingency conditions at Alamogordo Feeder 12-12. Failure to address these overloads could negatively impact system reliability.

Project Alternatives

This is the only viable solution as it utilizes an existing route and pole line.

Technical Aspects

Reconductor 2.0 miles of 477 ACSR to 795 AAC, from Alamogordo 12-12 feeder getaway to Pole #X93D082.

Project No: 15101714 Alamogordo Feeder 12-11 Reconductor

Company: 034
Location: 151

Project Information

Construction Start Date 1/1/2014 In Service Date Completion Date 12/31/15 Page 1

List Interim In-Service Dates

na

Project Need Justification

This project is needed to mitigate overloads during normal conditions on Alamogordo Feeder 12-11. Failure to perform this project could negatively impact system reliability.

Project Alternatives

This is the only viable solution as it utilizes an existing route and pole line.

Technical Aspects

Reconductor 1.5 miles of 1/0 ACSR to 397 AAC from Pole #Y93C257 to Pole #Y92C095.

Project No: 15101807 Alamorgordo Pure Project

Company: 034
Location: 151

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

Project Need Justification

This work was identified through Line Patrols and involves repairing and replacing small capital items including arrestors, cross-arms, cut-outs, capacitors, and insulators. This is work is necessary to maintain reliable service and safety to the public and PNM line crews. NMPRC Rule 17.9.560, Service Standards for Electric Utilities Rules, outlines requirements for following electrical and safety standards (NESC), minimizing interruption of service, and maintain protective safety measures. Not performing this work may decrease reliability and increase hazards to PNM personnel and the public.

Project Alternatives

None - this project is necessary to ensure system reliability and reduce the risk to PNM personnel.

Technical Aspects

Project involves like for like replacements of aging/obsolete or damaged equipment.

Company: 034
Location: 151

Project Information

Construction Start Date 1/1/2014 In Service Date Completion Date 02/28/15 Page 1

List Interim In-Service Dates

na

Project Need Justification

During an outage of Alamogordo Feeder 12-89, 71% of the feeder is transferred to Alamogordo Feeder 12-83. A recent study shows that when the Alamogordo 5 MW PV system on Alamogordo Feeder 12-83 is not operational during peak load conditions, approximately 16,000 feet of 336 ACSR and 477ACSR conductor could be loaded to as much as 157% of its emergency rating. Upgrading the conductor to 795AAC wire alleviates this overload condition.

Project Alternatives

This is the only viable solution to the overload as it utilizes an existing route and pole line.

Technical Aspects

This project requires the reconductor of approximately 3.1 miles of Alamogordo 12-83 from 336/477ACSR wire to 795 AAC wire from the Alamogordo substation getaway to Pole #X96D068.

Project No: 15134007 Tools & Equipment

Company: 034
Location: 151

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

04-2015, 07-2015, 10-2015, 12-2015. Quarterly clearings occur every year thereafter.

Project Need Justification

This Blanket project is for the purchase of tools and other work equipment required for the building and maintaining of both distribution and transmission power lines.

Project Alternatives

None - these tools are necessary for PNM to operate and maintain its transmission and distribution system.

Technical Aspects

This Blanket Improvement Authorization will have multiple work orders written against it. Each work order will represent a small capital tool replacement purchase.

Project No: 15200107 Line Extension - Residential

Company: 034
Location: 152

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

01-15,02-15,03-15,04-15,05-15,06-15,07-15,08-15,09-15,10-15,11-15,12-15. Monthly clearings occur every year thereafter.

Project Need Justification

This Blanket project includes capital expenditures relating to the provision of service to new retail customers and responding to increased load from existing residential customers.

Project Alternatives

None - this project is required to serve customer load.

Technical Aspects

Build new overhead or underground distribution lines to serve new residential customers as well as the load demands of existing residential customers.

Project No: 15200207 Line Extension - Commercial

Company: 034
Location: 152

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

01-15,02-15,03-15,04-15,05-15,06-15,07-15,08-15,09-15,10-15,11-15,12-15. Monthly clearings occur every year thereafter..

Project Need Justification

This Blanket project includes capital expenditures for the provision of services to new commercial customers and in support of increased loads of existing commercial customers.

Project Alternatives

None - this project is required to support customer load.

Technical Aspects

Line extensions include the design and installation of electric distribution facilities to include: conduit systems cable, wire, poles, OH/UG switches, transformers, protection and metering equipment.

Project No: 15200507 Lighting

Company: 034
Location: 152

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

01-15,02-15,03-15,04-15,05-15,06-15,07-15,08-15,09-15,10-15,11-15,12-15. Monthly clearings occur every year thereafter.

Project Need Justification

This Blanket project includes capital expenditures relating to the installation and removal of street lights in the Ruidoso Services District.

Project Alternatives

None - Mandatory

Technical Aspects

Install street lighting poles and lighting, wiring, transformers, and ancillary lighting equipment.

Project No: 15200607 ED Remove & Replace

Company: 034
Location: 152

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

01-15,02-15,03-15,04-15,05-15,06-15,07-15,08-15,09-15,10-15,11-15,12-15. Monthly clearings occur every year thereafter.

Project Need Justification

This project entails removing existing electric distribution facilities and replacing them with like for like equipment. This project is needed in order to replace failed/failing equipment failure and to complete public improvement projects.

Project Alternatives

None - Mandatory

Technical Aspects

Removal and replacement of electric distribution facilities will include the design and installation of conduit systems cable, wire, poles, OH/UG switches, transformers, protection and metering equipment.

Project No: 15200707 ED System Improvements

Company: 034
Location: 152

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

01-15,02-15,03-15,04-15,05-15,06-15,07-15,08-15,09-15,10-15,11-15,12-15. Monthly clearings occur every year thereafter.

Project Need Justification

This project involves upgrading existing electric distribution facilities to increase load serving capabilities, provide voltage support, enhance system protection, and increase system reliability.

Project Alternatives

None - Mandatory

Technical Aspects

Upgrades to existing electric distribution facilities include the design and installation of conduit systems cable, wire, poles, OH/UG switches, transformers, protection and metering equipment.

Company: 034
Location: 152

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A Page 1

List Interim In-Service Dates

04-2015, 07-2015, 10-2015, 12-2015. Quarterly clearings occur every year thereafter.

Project Need Justification

Project expenditures are for the installation of conductors and equipment necessary in providing electrical service to residential, commercial, and industrial customers.

Project Alternatives

None - Mandatory

Technical Aspects

The project includes the costs of engineering, inspections, materials, and installation of service wires and equipment for providing electrical service to residential, commercial, and industrial customers.

Project No: 15200907 Transformers

Company: 034
Location: 152

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

01-15,02-15,03-15,04-15,05-15,06-15,07-15,08-15,09-15,10-15,11-15,12-15. Monthly clearings occur every year thereafter.

Project Need Justification

This Blanket project is for the purchase and installation of transformers required to serve new customer loads and for outage restorations from failed transformers.

Project Alternatives

None - Mandatory

Technical Aspects

The project is for the purchase of transformers that are necessary to reduce primary distribution voltage levels to a usable level required of residential and business customers. The transformers purchased to be installed to provide service to new customers and to replace existing transformers that have failed for restoration of customer electrical services.

Project No: 15201007 Meter Equipment

Company: 034
Location: 152

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

04-2015, 07-2015, 10-2015, 12-2015. Quarterly clearings occur every year thereafter.

Project Need Justification

Project involves purchasing meters for normal work (e.g., new service, maintenance), due to retirements of meters (planned and unplanned due to damage, Rule 560 requirements), and replacing meters (due to failure of Rule 560 sample testing)

Project Alternatives

None - Mandatory

Technical Aspects

Both single and three phase solid state meters will be purchased. Some of the new meters will have remote communication capabilities.

Project No: 15201207 Pole Replacement

Company: 034
Location: 152

Project Information

Construction Start Date 3/1/2016 In Service Date Completion Date N/A

List Interim In-Service Dates

04-16,05-16,06-16,07-16,08-16,09-16,10-16,11-16,12-16. Monthly clearings occur every year thereafter.
Note the above interim in-service dates will be different, quarterly for pole replacement.

Project Need Justification

NMPRC regulations state that PNM shall keep the electric infrastructure in good repair based on industry standards. This capital blanket assures that intrastate distribution poles are replaced or reinforced based on ground line testing results. This project will improve safety for the field crews that climb the poles by systematically testing poles and replacing or repairing defective poles.

Project Alternatives

None - this project is required in order to comply with NMPRC regulations relating to electric infrastructure.

Technical Aspects

Perform ground testing of distribution poles and repairing/replacing those that do not pass the test.

Project No: 15201307 Cable Replacement

Company: 034
Location: 152

Project Information

Construction Start Date 1/1/2016 In Service Date Completion Date N/A

List Interim In-Service Dates

Project Need Justification

This project involves replacing underground cable in accordance with cable assessment results and replacement criteria. The risk of not replacing this cable includes the potential for extended power outages which would have an adverse affect on reliability.

Project Alternatives

The alternative to replacing cable is to repair cable. This alternative was not chosen because it is only a temporary fix.

Technical Aspects

PNM will perform cable assessments and based on these results and published replacement criteria, it will remove/abandon and replace 1/0, 4/0, and 750 cable as appropriate.

Project No: 15201613 Ruidoso White Mountain Subdivision

Company: 034
Location: 152

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date 03/10/15

List Interim In-Service Dates

upon completion of Project

Project Need Justification

This project is needed to replace deteriorated underground cables in the White Mountain Subdivision.

Project Alternatives

None - cables must be replaced.

Technical Aspects

Install new single phase runs of 1/0 underground cable with new conduit between existing transformers along subdivision streets.

Project No: 15201707 Ruidoso Pure Project

Company: 034
Location: 152

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

Project Need Justification

This work was identified through Line Patrols and involves repairing and replacing small capital items including; arrestors, cross-arms, cut-outs, capacitors, and insulators. This is work is necessary to maintain reliable service and safety to the public and PNM line crews. NMPRC Rule 17.9.560, Service Standards for Electric Utilities Rules, outlines requirements for following electrical and safety standards (NESC), minimizing interruption of service, and abiding by protective safety measures. Failure to perform this this work may decrease reliability and increase hazards to PNM personnel and the public.

Project Alternatives

None - project is required to ensure system reliability and reduce risk for PNM personnel and the public.

Technical Aspects

Purchasing like for like parts/equipment as replacements for aging/obsolete or damaged equipment.

Project No: 15234007 Tools & Equipment

Company: 034
Location: 152

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

04-2015, 07-2015, 10-2015, 12-2015. Quarterly clearings occur every year thereafter.

Project Need Justification

This Blanket project is for the purchase of tools and other work equipment required for the building and maintaining distribution and transmission power lines.

Project Alternatives

None

Technical Aspects

This Blanket Improvement Authorization will have multiple work orders each representing small capital tool replacements.

Project No: 15500107 Line Extension - Residential

Company: 034
Location: 155

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

01-15,02-15,03-15,04-15,05-15,06-15,07-15,08-15,09-15,10-15,11-15,12-15. Monthly clearings occur every year thereafter.

Project Need Justification

This Blanket project includes capital expenditures relating to the provision of services to new residential customers and in support of increased load of existing residential customers.

Project Alternatives

None - project is required to meet residential load requirements.

Technical Aspects

Line extensions include the design and installation of electric distribution facilities including conduit systems cable, wire, poles, OH/UG switches, transformers, protection and metering equipment.

Project No: 15500207 Line Extension - Commercial

Company: 034
Location: 155

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

01-15,02-15,03-15,04-15,05-15,06-15,07-15,08-15,09-15,10-15,11-15,12-15. Monthly clearings occur every year thereafter.

Project Need Justification

This Blanket project includes capital expenditures that will be used to provide service to new commercial customers and to support increased commercial loads of existing customers.

Project Alternatives

None - this project is required to meet customer load.

Technical Aspects

Line extensions include the design and installation of electric distribution facilities including conduit systems cable, wire, poles, OH/UG switches, transformers, protection and metering equipment.

Project No: 15500507 Lighting

Company: 034
Location: 155

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

01-15,02-15,03-15,04-15,05-15,06-15,07-15,08-15,09-15,10-15,11-15,12-15. Monthly clearings occur every year thereafter.

Project Need Justification

This Blanket project includes capital expenditures for the installation and removal of Silver City street lights.

Project Alternatives

None - this project is required to ensure adequate street lighting.

Technical Aspects

Install street lighting poles and lighting, wiring, transformers, and ancillary lighting equipment.

Project No: 15500607 ED Remove & Replace

Company: 034
Location: 155

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

01-15,02-15,03-15,04-15,05-15,06-15,07-15,08-15,09-15,10-15,11-15,12-15. Monthly clearings occur every year thereafter.

Project Need Justification

Project involves removing existing electric distribution equipment from facilities and replacing the equipment with like for like parts/materials. This project is required to replace damaged/obsolete equipment and to complete public improvement projects.

Project Alternatives

None - Mandatory

Technical Aspects

Remove and replacement of electric distribution facilities include the design and installation of conduit systems cable, wire, poles, OH/UG switches, transformers, protection and metering equipment.

Project No: 15500707 ED System Improvements

Company: 034
Location: 155

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

01-15,02-15,03-15,04-15,05-15,06-15,07-15,08-15,09-15,10-15,11-15,12-15. Monthly clearings occur every year thereafter.

Project Need Justification

Involves upgrading existing electric distribution facilities to increase load serving capabilities, provide voltage support, enhance system protection, and increase overall system reliability.

Project Alternatives

None - this project is required to ensure system reliability.

Technical Aspects

Upgrades to existing electric distribution facilities include the design and installation of conduit systems cable, wire, poles, OH/UG switches, transformers, protection and metering equipment.

Project No: 15500807 Services

Company: 034
Location: 155

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

04-2015, 07-2015, 10-2015, 12-2015. Quarterly clearings occur every year thereafter.

Project Need Justification

This Blanket project includes capital expenditures that are necessary to support residential, commercial, and industrial electric services.

Project Alternatives

None - this Blanket Improvement Authorization is required to serve customer loads.

Technical Aspects

This Blanket Improvement Authorization entails the installation of service wires and equipment for providing service to residential, commercial, and industrial customers.

Project No: 15500907 Transformers

Company: 034
Location: 155

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

01-15,02-15,03-15,04-15,05-15,06-15,07-15,08-15,09-15,10-15,11-15,12-15. Monthly clearings occur every year thereafter.

Project Need Justification

This Blanket project is for the purchase and installation of transformers required to serve customer loads and for outage restoration from failed transformers.

Project Alternatives

This is a Blanket Improvement Authorization that will involve the purchase of required equipment - there are no alternatives.

Technical Aspects

The project is for the purchase of transformers that are necessary to reduce primary distribution voltage levels to a usable level required of residential and business customers. The transformers purchased to be installed to provide service to new customers and to replace existing transformers that have failed for restoration of customer electrical services.

Project No: 15501007 Meter Equipment

Company: 034
Location: 155

Project Information

Construction Start Date 1/1/2013 In Service Date Completion Date N/A

List Interim In-Service Dates

04-12, 07-12, 10-12, 11-12, 12-11. Quarterly clearings occur every year thereafter.

Project Need Justification

This project entails purchasing new meters for normal work (i.e., new service, maintenance), replacing retiring meters (planned and unplanned due to damage, Rule 560 requirements), and replacing failed meters (due to failure of Rule 560 sample testing)

Project Alternatives

None - Mandatory

Technical Aspects

Purchases involve single and three phase solid state meters. Some these new meters will have remote communication capabilities.

Project No: 15501207 Pole Replacement

Company: 034
Location: 155

Project Information

Construction Start Date 5/1/2016 In Service Date Completion Date N/A

List Interim In-Service Dates

06-16,07-16,08-16,09-16,10-16,11-16,12-16. Monthly clearings occur every year thereafter.
Note the above interim in-service dates will be different, quarterly for pole replacement.

Project Need Justification

NMPRC regulations state that PNM shall keep the electric infrastructure in good repair based on industry standards. This capital blanket assures that intrastate distribution poles are replaced or reinforced based on ground line testing results. This project will improve safety for the field crews that climb the poles by systematically testing poles and replacing or repairing defective poles.

Project Alternatives

The alternative is not testing poles and replacing those that are defective/damaged. This alternative could result in damaged poles and injuries to PNM workers.

Technical Aspects

PNM will perform ground line testing of its distribution poles and repair/replace those that perform poorly on these tests.

Project No: 15501307 Cable Replacement

Company: 034
Location: 155

Project Information

Construction Start Date 5/1/2014 In Service Date Completion Date N/A

List Interim In-Service Dates

01-11,02-11,03-11,04-11,05-11,06-11,07-11,08-11,09-11,10-11,11-11,12-11. Monthly clearings occur every year thereafter.
Note the above interim in-service dates will be different, quarterly, for the cable replacement blanket

Project Need Justification

The known faulted cable on the system spans approximately 665,000 ft. (out of 28 million ft.) and has been growing at a rate of 108,000 ft./year over last 10 years. This project will enable PNM to replace approximately 77,000 ft. of faulted cable a year.

Project Alternatives

None - Mandatory

Technical Aspects

Using PNM established guidelines, PNM can prioritize cables making the largest impact to SAIDI. This should keep the SAIDI minutes in the range between 5-7 SAIDI minutes on the system based upon historical data. PNM anticipates that by spending the allotted money on underground cable there will be a decline in the rate of increase for number of faults.

Project No: 15501613 Tyrone Circuit 12-395 Reconductor

Company: 034
Location: 155

Project Information

Construction Start Date 3/1/2014 In Service Date Completion Date 12/31/15

List Interim In-Service Dates

NA

Project Need Justification

The Tyrone Circuit 12-395 provides service to the Tyrone town site, portions of the Freeport McMoran mining operations, and the Woodward Wells (the predominant source of municipal water for the Town of Silver City). During single contingency for loss of service of the Tyrone substation, backup is provided from Silver City feeder 12-18. The existing conductor is #6 copper and #4 ACSR. Reconductoring the circuit to 4/0 ACSR will increase capacity and improve the voltage profile. Distribution Planning has this project in the 10 year plan for 2017. The 10 year plan also addresses the incremental load growth of Silver City circuit 12-18. Load growth projections indicate that in four years, Tyrone circuit 12-395 will be needed to backup circuit 12-18 in the Silver City Substation, Having the feeder capacity in place by 2014 will supplement this project.

Project Alternatives

Given the location of the Tyrone substation and the distribution system configuration there are no alternatives to this project.

Technical Aspects

This project requires the conductor of 3.7 miles of Tyrone Circuit 12395 from #4 ACSR to 4/0 ACSR from the Tyrone Substation to step up transformer bank Pole #TF1B108.

Project No: 15501707 Silver City Pure Project

Company: 034
Location: 155

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

Project Need Justification

This work was identified through Line Patrols and includes the repair and replacement of small capital items including arrestors, cross-arms, cut-outs, capacitors, and insulators. This is work is necessary to maintain reliable service and safety to the public and PNM line crews. NMPRC Rule 17.9.560, Service Standards for Electric Utilities Rules, outlines requirements for following electrical and safety standards (NESC), minimizing interruption of service, and protective safety measures. By not performing this work, system reliability could be impacted and PNM personnel would be at an increased risk.

Project Alternatives

None

Technical Aspects

Project involves the like for like replacement of aging or damaged equipment.

Project No: 15501711 Silver City Capital Bird Guarding

Company: 034
Location: 155

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date 12/31/14 Page 1

List Interim In-Service Dates

Complete 11/1/2015

Project Need Justification

We have identified the bird laws as a regulatory vulnerability for PNM. This project demonstrates a good faith effort to protect birds and thereby limits corporate liability for prosecution under the Migratory Bird Treaty Act (MBTA) and other bird laws. The different projects for installation of Bird Guarding on PNM distribution lines are identified from outage reports requiring remedial action of bird guarding, known areas to be inhabited and frequented by protected birds having PNM distribution lines in the areas.

Project Alternatives

None

Technical Aspects

The different projects identified provide for the installation of protective covers over insulators, wires, transformer bushings, switch covers and other equipment in areas known to be inhabited/frequented by birds projected under the Migratory Bird Treaty Act to reduce the hazard of an electrocution hazard.

Project No: 15501715 Silver City 12-17 North Silver 12-1065

Company: 034
Location: 155

Project Information

Construction Start Date 1/1/2016 In Service Date Completion Date 06/30/16 Page 1

List Interim In-Service Dates

NA

Project Need Justification

This project will improve transfers between the North Silver Feeder 12-1065 and Silver City Feeder 12-17 through the use of a three-phase feeder tie design and SCADA controlled switches. Two additional Scadamate switches are recommended which will allow isolation of faults on Silver City Feeder 12-17 which will improve operational flexibility for outages on the far western portions of feeder 12-17. Presently, the single contingency plans for Silver City South Substation transfers to the Silver City North Substation utilizing the Silver City Substation tie bus. This new feeder tie will create a new alternate path for backup of the eastern half of the Silver City 12-17 Feeder. The new Scadamate switches will allow for the isolation of faults on laterals that are at the end of the feeder will enable quicker restorations.

Project Alternatives

An alternative to this solution is to do nothing. Doing nothing could cause extended power outages for customers due to the lack of backup feeder tie capacity at the Silver City South Substation during outages.

Technical Aspects

Rebuild part of the North Silver 12-1065 and Silver City 12-17 feeders by reconductoring several single and two phase laterals to create a new three phase feeder tie.

Project No: 15534007 Tools & Equipment

Company: 034
Location: 155

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

04-2015, 07-2015, 10-2015, 12-2015. Quarterly clearings occur every year thereafter.

Project Need Justification

This Blanket project is for the purchase of tools and other work equipment required for building and maintaining distribution and transmission power lines.

Project Alternatives

None. The tools that will be purchased through this Blanked Improvement Authorization are needed in order to maintain PNM's distribution and transmission system

Technical Aspects

This Blanket Improvement Authorization will have multiple work orders with each representing small capital tool replacements.

Project Type: 17-PNM South Transmission

Project No: 22007010 Misc. Trans. Station Imp Foreca

Company: 035
Location: 220

Project Information

Construction Start Date 1/1/2012 In Service Date Completion Date N/A

List Interim In-Service Dates

Project Need Justification

This blanket project includes capital expenditures for equipment replacement and station improvement.

Project Alternatives

Alternatives will be assessed at the work order level

Technical Aspects

This blanket project may be used for replacement of station batteries, lightning arrestors, transformer bushings and upgrades to substation relay protection system.

Project No: 22007110 Misc. 115kv Trans Imp Forecast

Company: 035
Location: 220

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

Project Need Justification

This Blanket project includes capital expenditures for upgrades and replacements needed to maintain safe and reliable operation of the 115kV transmission system.

Project Alternatives

This Blanket Improvement Authorization will have several work orders written against it. Project alternatives will be evaluated at the work order level.

Technical Aspects

This Blanket Improvement Authorization will be used to replace failed 115kv capital items including structures, line switches, insulators, and conductors.

Project No: 22007111 SNM Misc 69Kv Line Impr.

Company: 035
Location: 220

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date N/A

List Interim In-Service Dates

Project Need Justification

This Blanket project includes capital expenditures for upgrades and replacements needed to maintain safe and reliable operation of the 69kV transmission system.

Project Alternatives

This is a Blanket Improvement Authorization where multiple work orders will be written for small capital replacement or improvements. Individual alternatives are assessed at work order level.

Technical Aspects

This Blanket Improvement Authorization will be used to replace failed 69kv capital items including structures, line switches, insulators, and conductor.

Project No: 22007214 69kV Breaker Replacements

Company: 035
Location: 220

Project Information

Construction Start Date 8/11/2014 In Service Date Completion Date 12/31/14 Page 1

List Interim In-Service Dates

NA

Project Need Justification

This project involves replacing two aging circuit breakers at the MD-1 and Turquoise stations, in Grant County, NM (near Silver City). These breakers were manufactured in 1981 and 1982 and are nearing the end of their useful life. The breakers have been performing poorly for some time and have needed extensive (often times unplanned) maintenance. Due to their age, PNM has found it difficult to secure spare parts as many of the regularly need mechanisms within the breakers are functionally obsolete. Rather than potentially experiencing a breaker failure during equipment operation, it is preferable to replace these breakers with more modern technology, icluding breaker condition monitoring systems to ensure greater reliability going forward.

Project Alternatives

As an alternative, PNM could continue to utilize the existing existing breakers. Following this path increase the risk of failure as they continue to age, as well as increase the time and cost of locating parts that are difficult to acquire.

Technical Aspects

Outages are required to install these breakers. The installation work at MD-1 will occur when the capacitor banks are not utilized. The work at Turquoise will be performed when the 69kV LC transmission line can be taken out of service.

Project No: 22007308 HVDC Converter Station-Eddy Cou

Company: 035
Location: 220

Project Information

Construction Start Date 1/1/2010 In Service Date Completion Date N/A

List Interim In-Service Dates

Projects are cleared as they are invoiced to PNM.

Project Need Justification

PNM share of miscellaneous capital improvements /replacements associated with joint transmission project (contract).

Project Alternatives

Projects proposed by operating agent and authorized by E&O committee comprised of representatives of all the owners.

Technical Aspects

This project (a back to back AC/DC/AC converter) allows interconnection between the Western Electric Coordinating Council and ERCOT

Project No: 22007314 Amrad Eddy Line Rebuild

Company: 002
Location: 220

Project Information

Construction Start Date 9/1/2014 In Service Date Completion Date 03/31/15 Page 1

List Interim In-Service Dates

Project Need Justification

PNM is a participant in the Eastern NM Transmission project which includes the Amrad-Eddy 345kv line. This project involves PNM's share of the replacement of approximate 16 miles of the existing Amrad-Eddy 345kv line which failed during successive ice storms.

Project Alternatives

This line is the sole link to the Eddy County Converter station, which is a back to back AC/DC/AC connection between the WECC and SWPP. There is not alternative to replacing this line.

Technical Aspects

The failed wood h-frame structures will be rebuilt with steel h-frame structures and the existing T-2 style conductor will be replaced with conventional ACSR conductor.

Projects with clearings in 2015 and 2016, Budget data for 2015 - 2019

Project No: 22007410 PD Load Shedding

Company: 035
Location: 220

Project Information

Construction Start Date 3/1/2016 In Service Date Completion Date 05/31/16 Page 1

List Interim In-Service Dates

Project Need Justification

The southwestern New Mexico load area includes the PNM loads in Silver City and Lordsburg as well as other large mining loads. Technical studies have identified low voltage on the southwestern New Mexico 115 kV system for outage of 115 kV transmission facilities. This project will modify the existing mining load shedding schemes to accommodate additional contingencies that are not factored into the existing scheme. Without this project PNM will be in violation of NERC Transmission Planning compliance standards (TPL).

Project Alternatives

Installing additional voltage support was considered as an alternative to this project. However, since the mining load is interruptible, load shedding will be utilized instead of more expensive system enhancements

Technical Aspects

A study will be conducted to define the required scheme changes. Once the study is complete, anticipated activities include installing equipment required to monitor and communicate load quantities and modifying existing scheme logic to trip load for additional system conditions.

Project Need Justification

On June 12, 2014, the Alamogordo 115 kV shunt capacitor bank #1 tripped and was taken out-of-service. Subsequent inspections showed the shunt capacitor bank was damaged. Since this shunt capacitor bank had been previously identified as being at risk of failed individual shunt capacitor elements, a replacement bank was purchased, but not installed.

Project Alternatives

This work is consistent with previous recommendations on the least cost solutions for obtaining adequate voltage support in Alamogordo. The project will restore existing required voltage support to service and accelerate the plan to relocate the shunt capacitor (currently budgeted in 2016). The project will maintain the reliability of PNM's bulk transmission consistent with North American Electric Reliability Corporation reliability standards requirements. A "No Action" alternative is not considered reasonable as it would fail to restore the existing required voltage support provided by the capacitor.

Technical Aspects

Transmission Planning and System Engineering are recommending the replacement capacitor bank be installed and that the Alamogordo bus be expanded to allow the installation in a new termination that is independent of the Alamogordo-Amrad 115 kV line. The project will also include the installation of a Mechanically Operated Device on switch 115-2041 and protection upgrades to address existing protection exposures. The protection upgrades include removing an out of service switch, upgrading relay panels for two breakers, and relocating the panels to the newer control house. These improvements to the Alamogordo ring bus are reliability enhancements associated with the new termination for consistency with PNM design standards and good utility practices.

List Interim In-Service Dates

N/A

Project Need Justification

In response to a North American Electric Reliability Corporation requested action in 2010, PNM initiated efforts in 2011 to study and correct clearance risks that could limit the capabilities of its existing 115 kV and higher transmission lines. As part of this effort, lines were classified as "high", "medium" and "low" priority lines with a schedule to address clearance risks on high priority lines in 2012, medium priority lines in 2013 and low priority lines in 2014.

Project Alternatives

There are no cost effective alternatives to the propose clearance improvements on the existing lines. Installing new lines rather upgrading existing lines would be more costly, result in greater environmental impacts, and could potentially require years of lead time.

Technical Aspects

Clearance improvements will be achieved through the se of Phaseraise technology and pole replacements. Essentially, these improvements raise the height of critical spans to increase the clearance levels for the lines. The majority of work required for the clearance improvements can be completed without taking lines out of service.

Project No: 22009008 Alamo 115kv Static Var Compensa

Company: 035
Location: 220

Project Information

Construction Start Date 1/1/2010 In Service Date Completion Date 09/15/14 Page 1

List Interim In-Service Dates

Project Need Justification

Technical studies have demonstrated that without this project PNM will be in violation of North American Electric Reliability Corporation (NERC) Transmission Planning compliance standards. Non-compliance with NERC standards could subject PNM to fines ranging from a few thousand dollars to several hundred thousand dollars for each day PNM remains in violation. This fine could also be adjust upward to a maximum of one million dollars per day per violation depending on the number of violations, the degree of the violations, and other factors of the violation.

Project Alternatives

Construct a 345 kV line from the West Mesa-Arroyo 345 kV line to the Ruidoso area. This project would require the construction of a new 345 kV switching station (approximate cost of $12 million), a 100 mile 345 kV line (approximate cost of $70 million - $700,000/mile), a 115 kV switching station (approximate cost of $2 million), a 345/115 kV transformer (approximately $8 million), and other related 115 kV work (approximately $2 million). The total cost of this alternative would be approximately $94 million.

Technical Aspects

Analysis of the southeastern New Mexico transmission system has shown that there is a potential for severe voltage depression in the Alamogordo area and in PNM's surrounding transmission system during peak load conditions for n-1 and breaker failure outages. In order to comply with NERC, Western Electricity Coordinating Council, and PNM Planning and Performance criteria, PNM has determined the need to install a +/- 12 Mvar dynamic device along with two mechanically-switched shunt capacitor banks (MSCC). These MSCCs along with one existing 16 Mvar shunt capacitor will be switched by the dynamics var device as required to maintain a set voltage schedule at the Alamogordo 115 kV switching station to maintain acceptable system performance. To accommodate the dynamic var system device, a second 115 kV switching station will need to be constructed adjacent to the existing Alamogordo 115 kV station.

Project Type: 18-Production Related

Project No: 70016108 Capitalization Policy changes co 3

Company: 003
Location: 700

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date 12/31/19 Page 1

List Interim In-Service Dates

Project Need Justification

Required maintenance that meets the criteria for capitalization.

Project Alternatives

No viable alternatives.

List Interim In-Service Dates

Project Need Justification

This project is used for various accounting adjustments. The adjustments include AFUDC true ups for FERC Order 561 and the capitalized interest calculated for the non-jurisdictional portion of Palo Verde Common that is not in rates. This project is also used as a capital wedge project for tradeoffs between organizations. The amount related to the wede portion of this project is $4,093,612. This offsets the two NM Ops wedge projects: 60002015-Specific Distribution Wedge for $(8,088,248) and 65008807-Transmission Wedge for $3,994,636.

Project Type: 20-Shared Service

Project No: 17430714 SFSC Water Heater Replacement

Company: 007
Location: 174

Project Information

Construction Start Date 6/2/2014 In Service Date Completion Date 10/15/2014 Page 1

List Interim In-Service Dates

Project Need Justification

This project will replace the aging and inefficient water heaters in the Admin/Engineering, Line Department, and Meter buildings located at the Santa Fe Service Center complex. The current units are past their useful life and are unreliable.

Project Alternatives

The alternative is to replace each water heater as it completely breaks down. This will lead to more expensive replacements and repairs, as well as could bring other equipment off-line during the unanticipated downtime.

Technical Aspects

Purchase and installation of water heaters in the three buildings.

Project No: 17430814 SFSC Fleet HVAC Replacement

Company: 007
Location: 174

Project Information

Construction Start Date 6/9/2014 In Service Date Completion Date 10/3/2014 Page 1

List Interim In-Service Dates

Project Need Justification

This project will replace the obsolete and inefficient HVAC unit at the Santa Fe Service Center Fleet building. The unit is unable to regulate room temperatures to a manageable level.

Project Alternatives

The current HVAC unit may be able to be repaired and utilized until completely out of service, but it is difficult to obtain service and parts for the dated unit, so even this option would be relatively expensive.

Technical Aspects

Purchase and installation of an HVAC unit on the roof of the Fleet building.

Project No: 17431714 SFSC Heat Source Pump Replacements

Company: 007
Location: 174

Project Information

Construction Start Date 2/14/2014 In Service Date Completion Date 6/30/2014 Page 1

List Interim In-Service Dates

Project Need Justification

This project is to replace 17 water source heat pumps at the Santa Fe Service Center complex. The current pumps are approximately 28 years of age and have reached their useful life.

Project Alternatives

The current pumps may be able to be repaired and utilized until they have completely broken down. It is difficult to obtain service and parts for the dated units and repairing units after they have broken down results in longer downtimes and may affect other equipment.

Technical Aspects

Purchase and installation of water source heat pump units.

Construction Start Date 12/12/2013 In Service Date Completion Date 12/31/2013 Page 1

List Interim In-Service Dates

Project Need Justification

This project is to purchase a screen and proxima projection equipment for the Santa Fe Trail and Turquoise Conference Rooms at the Santa Fe Service Center. This equipment will tie into the new videoconferencing equipment which will provide for increased communication and training capabilities with other Operations' sites. This should decrease travel expense.

Project Alternatives

Alternatives include: 1) Continue to use dated equipment and perform breakdown maintenance as needed, 2) Utiliize paper handouts as backup in case of equipment failure. This new equipment will also eliminate a tripping hazard with cords on the floor.

Technical Aspects

Purchase and installation of a projection screen and proxima projector.

Project No: 89830514 Downtown Building Improvements

Company: 007
Location: 898

Project Information

Construction Start Date 5/1/2014 In Service Date Completion Date 3/31/2015 Page 1

List Interim In-Service Dates

Project Need Justification

In 2014, this project will fund downtown building improvements and repairs related to meter reading equipment, general building improvements, the roof, HVAC, flooring, elevator controls, corporate CD burner, and/or the parking structure roof. These are projects that are required each year but have to be addressed as they arise. (Note that project 89830714, Downtown Parking Structure roof, is one of the projects funded in the 89830514 wedge.)

Project Alternatives

This funding project is used as a wedge for downtown projects. As projects are determined and approved, separate funding numbers are established. No alternatives can be determined at this point since alternatives are evaluated prior to commencing each individual project included under this wedge.

Technical Aspects

The technical aspects will be determined as each project is evaluated and approved.

Project No: 89830714 Downtown Parking Structure Roof

Company: 007
Location: 898

Project Information

Construction Start Date 5/30/2014 In Service Date Completion Date 8/30/2014 Page 1

List Interim In-Service Dates

Project Need Justification

This project will replace the roof of the employee parking structure over the elevator pit, equipment roof, and two stairs. This structure is located in Downtown Albuquerque at Fifth and Silver Streets SW. The structure was built in 2001 and the roof has reached its useful life, has been damaged during weather events, and leaks during bad weather. (Note: this project was funded as part of the 2014 AOP wedge under project number 89830514 and was identified after the AOP process during Q1 2014.)

Project Alternatives

Temporary repairs could extend the life of the roof for a short period, but this could ultimately lead to structural damage and would require a more expensive replacement.

Technical Aspects

The current roof will be removed and a TPO (rubber membrane) Firestone roof will be installed.

Project No: 91128015 MS Upgrade AD

Company: 007
Location: 911

Project Information

Construction Start Date 4/1/2015 In Service Date Completion Date 12/13/2015 Page 1

List Interim In-Service Dates

Project Need Justification

Upgrade Microsoft Active Directory to latest, supported platform. Remaining on an unsupported platform introduces IT security concerns since product is at end of life and no longer supported by Microsoft. Upgrading to this new platform ensures this system remains both secure and supported.

Project Alternatives

Do nothing and remain on unsupported platform or upgrade to latest supported platform.

Technical Aspects

Software procurement and implementation of product, to include interfacing with other internal systems and completing all phases of quality assurance testing before placing system into production.

Project No: 91128112 PowerPlant Version 10 Upgrade

Company: 007
Location: 911

Project Information

Construction Start Date 3/15/2012 In Service Date Completion Date 1/30/2014 Page 1

List Interim In-Service Dates

Project Need Justification

This project updates our current PowerPlant financial management system software to the latest vendor supported version (v.10). Implementation to this new release is needed since our current version is at end of life. This v.10 update contains features and functionality that our CFO group needs to create efficiencies within the department. This is a standard upgrade and provides sustainability for our PowerPlant enterprise system.

Project Alternatives

Upgrade to current version of PowerPlant financial management system or continue to use current version with more limited functionality, which leads to process redundancies and inefficiencies.

Technical Aspects

Hardware and software procurements and implementation. Implementation will include interfaces to several other Company systems, as well as completing all phases of Quality Assurance testing before the system in placed into production.

Project No: 91128716 PowerPlant v. 10 Add Generational Repairs and Main

Company: 007
Location: 911

Project Information

Construction Start Date 4/1/2016 In Service Date Completion Date 12/31/2016 Page 1

List Interim In-Service Dates

Project Need Justification

Electric utilities must comply with special IRS rules relating to repairs expense. The best method to ensure compliance with IRS safe harbor provisions is to systematize the repairs expense identification and tracking within the plant accounting system. The repairs module analyzes each eligible workorder that goes into the plant system to determine whether it should be expensed or capitalized for tax purposes. PNMR has already implemented the PowerPlan repairs module for Transmission & Distribution (T&D) assets but has yet to do so for Generation assets. Since Generation assets have different IRS rules than T&D a separate system is needed.

Project Alternatives

Do nothing and maintain the data tax credit information manually, or update to the PowerPlan V.10 generation module to capture and maintain this data. PowerPlan is the recognized leader in utility plant systems and in-repairs identification. It does not make sense to use any other vendor, as PowerPlan is not only the recognized leader in the area, but are utilized by T&D. An integrated PowerPlan system is preferred to an add-on repairs system

Technical Aspects

Acquire, set up, and configure and implement a new generation tax module to existing PowerPlan v.10 system. Implementation will include all phases of quality assurance testing before the system is placed into production

Project No: 91128915 OpenPages Replacement

Company: 007
Location: 911

Project Information

Construction Start Date 3/1/2015 In Service Date Completion Date 12/31/2015 Page 1

List Interim In-Service Dates

Project Need Justification

The OpenPages system used by Audit Services is out of support and the infrastructure platform on which it resides is being decommissioned due to the vendor no longer supporting the platform. Therefore, a suitable replacement product needs to be identified and implemented before these support shortfalls occur. Not implementing this project introduces a high degree of IT security risks since the product vendor and Microsoft will no longer provide security patches or enhancements. Without a stable, available system we might be unable to provide the necessary regulatory compliance information for the company.

Project Alternatives

Implement a new system that is under software and hardware support, or do nothing and continue using an unsupported system.

Technical Aspects

Procurement of new audit software tool, hardware platform and implementation of this system to include all phases of quality assurance testing before going into production.

Project No: 92428013 PNM.com Facelift

Company: 007
Location: 924

Project Information

Construction Start Date 4/3/2013 In Service Date Completion Date 1/31/2014

List Interim In-Service Dates

Project Need Justification

This is a 2013 and 2014 project that completely redesigns the PNM.com website to add new features, new technology capabilities, and more customer-facing interactions and easier transactions. Results of the JD Power "audit"/survey indicated this was an extremely important priority for our customers as more and more are using PNM.com to interact with PNM.

Project Alternatives

Design and implement PNM.com website or do nothing.

Technical Aspects

Hardware procurement and software design and implementation. Implementation includes all phased on quality assurance testing before the system is placed into production.

Project No: 92428014 PNM.com Redesign Phase II

Company: 007
Location: 924

Project Information

Construction Start Date 1/1/2014 In Service Date Completion Date 3/31/2015

List Interim In-Service Dates

Project Need Justification

This project is a 2014-only project that will be started after PNM.com Phase 1 project (92428013) is completed. This project is a continuation phase of the PNM.com website redesign project. Implementation will include a new customer facing website with features that were not introduced as part of the original redesign project. Results of the JD Power "audit"/survey indicated that these features were an extremely important priority for our customers.

Project Alternatives

Design and implement new PNM.com features and enhancements or do nothing.

Technical Aspects

Software design and implementation. Implementation will include all phases of quality assurance testing before the system is placed into production.

Project No: 92428016 Banner NM PV Enhancements

Company: 007
Location: 924

Project Information

Construction Start Date 2/1/2016 In Service Date Completion Date 12/31/2016 Page 1

List Interim In-Service Dates

Project Need Justification

This project upgrades our current Customer Information System (CIS) to a new, vendor supported product. Our current system is at end of life and is no longer supported by the vendor. This introduces security and supportability risks that we need to mitigate. Additionally, new products provide added functionality that we see as adding value to our company and customers.

Project Alternatives

Implement project to upgrade new vendor supported CIS, or do nothing and continue to operate with unsupported product.

Technical Aspects

Software product procurement and implementation. Implementation will include interfaces with other Company systems as well as completing all phases on Quality Assurance testing before placing the system into production.

Project No: 92428115 Customer Service BI Analytics

Company: 007
Location: 924

Project Information

Construction Start Date 6/1/2016 In Service Date Completion Date 12/31/2015 Page 1

List Interim In-Service Dates

Project Need Justification

The business has requested new functionality to its Customer Service (CS) Business Intelligence (BI) performance metrics portal. This will include new warehouses and metrics development for CS Executive reporting, Credit & Collections, Payment Controls, Customer Contact, and Call Center. This new functionality will provide the ability to assess the current business situation, and anticipate tactical and strategic implications through performance analysis. Implementing this project will result in a significant decrease in manual data collections and data analysis which we consider both inefficient and costly. Our existing Business Intelligence tools are specifically designed to capture and manage this data and allow automated, cost-effective data management.

Project Alternatives

Provide the business this requested new functionality, or do nothing, which will ultimately lead to higher operational costs due to manual data collections and analysis.

Technical Aspects

Design and implement internally developed BI portal implementation to include all phases of quality assurance testing before being placed into production.

Project No: 92428116 Banner NM PV Enhancements

Company: 007
Location: 924

Project Information

Construction Start Date 5/1/2015 In Service Date Completion Date 12/31/2015 Page 1

List Interim In-Service Dates

Project Need Justification

Our Customer Service team has requested functional enhancements to the Banner Customer Service - NM system to effectively incorporate PV (Solar Photovoltaic) programs such as Small/Large PV, Third Party PV, and Solar Gardens. Implementing this project would enhance PNM's ability to meet our customer's expectations for the management of PV accounts and programs and could minimize or eliminate the processing of incorrect customers' bills due to managing this PV data manually.

Project Alternatives

Provide the requested automated system functionality or do nothing.

Technical Aspects

Design and implement new Banner system enhancements to include all phases of quality assurance testing before being placed into production.

Project No: 92428214 Banner Platform Upgrade

Company: 007
Location: 924

Project Information

Construction Start Date 9/9/2014 In Service Date Completion Date 7/15/2015 Page 1

List Interim In-Service Dates

Project Need Justification

This project moves our Banner applications for NM and TX from UNIX servers to new, lower cost LINUX servers. Implementing this hardware change will eliminate maintenance costs of $257K a year. Banner is used for electric service delivery, customer account mgmt and billing in NM and TX.

Project Alternatives

Implement this Banner application hardware conversion or do nothing.

Technical Aspects

Hardware set-up, software and hardware implementation. Implementation will include all phases of Quality Assurance testing before the systems in placed into production.

Project No: 92428514 Customer Solar Interconnect Web App

Company: 007
Location: 924

Project Information

Construction Start Date 4/1/2015 In Service Date Completion Date 12/31/2015 Page 1

List Interim In-Service Dates

Project Need Justification

This project provides a customer interfacing system which is needed to allow PNM customers to apply for interconnection of their renewable energy systems to the PNM electric grid via PNM.com website. Application volumes have been steadily increasing which is requiring more manpower to support, maintain and provide reporting. Implementing this automated tool, would reduce overall costs and ensure that PNM complies with the NMPRC rules for interconnection processing.

Project Alternatives

Design and implement this customer-facing system via PNM.com or do nothing.

Technical Aspects

Design and implement an internally developed system to include all phases of quality assurance testing before being placed into production.

Project No: 92428814 Banner Enhancements

Company: 007
Location: 924

Project Information

Construction Start Date 2/15/2015 In Service Date Completion Date 3/31/2015 Page 1

List Interim In-Service Dates

Project Need Justification

This project is our on-going annual enhancement to our Banner Customer Service system to include Charge Calc, new reports and forms, courtesy letter process, deposit/refund/payment applications, new meter and billing exceptions, etc., These are considered on-going, required system enhancements to better align us to our customers' needs, new system and reporting requirements, and NMPRC requirements and reporting.

Project Alternatives

None. These are on-going enhancements that need to be performed to our customer's demands and NMPRC requirements.

Technical Aspects

Banner system software customizations and enhancements.

Project No: 94128114 Oracle BIFS

Company: 007
Location: 941

Project Information

Construction Start Date 3/31/2014 In Service Date Completion Date 2/19/2015 Page 1

List Interim In-Service Dates

Project Need Justification

This project implements Oracle Financial/HR Analytics (BIFS) as a delivered product to our PeopleSoft HR/Financial system. Implementation of this product standardizes business intelligence and reduces proliferation of one-off reporting solutions (spreadsheets, etc.). It also improves our ability to provide support efficiently while taking advantage of built-in enterprise metrics.

Project Alternatives

Procure and implement Oracle BIFS software within our PeopleSoft HR/Financial system or do nothing and continue to operate through a nonstandardized process.

Technical Aspects

Software procurement and implementation. Implementation will include all phases of Quality Assurance testing before the system is placed into production.

Project No: 94128314 Production Cost Expansion Planning Software

Company: 007
Location: 941

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date 12/31/2015 Page 1

List Interim In-Service Dates

Project Need Justification

This project replaces current Ventyx Strategist and ProMod applications with a new and supported software tool that provides functionality of both applications. Ventyx is retiring their ProMod and Strategist tools so these products will no longer be supported, which means we will no longer be getting vendor calculation updates needed by the business. Without performing replacement of these products, we will be unable to accurately forecast earnings, cash flows, and costs. In addition, PNM would not be able to accurately develop future resource requirements to serve PNM customers or provide the necessary accurate data that NMPRC requires relating to resource expansion planning and fuel cost forecasting for regulatory filings.

Project Alternatives

Replace these products with new, supported systems or do nothing and work with less accurate forecasting, which would be unacceptable.

Technical Aspects

Hardware and commercial software procurement and implementation to include all phases of quality assurance testing before going into production.
