Project No: 94128414 Environmental Screening Process Automation

Company: 007
Location: 941

Project Information

Construction Start Date 1/1/2014 In Service Date Completion Date 12/31/2014 Page 1

List Interim In-Service Dates

Project Need Justification

This project will be used by Environmental Services, TNMP Engineering & Operations, PNM Engineering and Operations, PNM Generation, and Vegetation Management departments to create a portal to capture Environmental Screening forms for all PNMR business units, and standardize the capture of environmental triggers. This will enable the management of changing compliance requirements in a more timely and consistent manner to affected operations groups. Errors can have serious consequences in terms of federal, state, and local compliance rules resulting in fines and/or civil and criminal actions against PNM.

Project Alternatives

Implement this internal Environmental Screening process portal or do nothing. This new system makes it easier to manage changing compliance requirements in a more timely and consistent manner and therefore was deemed to be the preferred option.

Technical Aspects

Design and implement this software solution. Technologies to be deployed are Tibco Business Works, Sencha UI Developer, and LifeRay Portal. Implementation will include all phases of Quality Assurance testing before the system is placed into production.

Project No: 94128815 Training Mgmt Tool

Company: 007
Location: 941

Project Information

Construction Start Date 4/1/2015 In Service Date Completion Date 12/31/2015

List Interim In-Service Dates

Project Need Justification

This project provides an in-house or commercial off-the-shelf Training Management Tool to be used to track and demonstrate NM Operations personnel compliance with mandatory training. Currently the management of this training is done manually which is inefficient, costly, and carries a high degree of risk in making errors on compliance training metrics.

Project Alternatives

Design or build, and implement the requested Training Management Tool or continue with our current manual process.

Technical Aspects

Build or procure a software solution, and implement this solution to include all phases of quality assurance testing before placing this system into production.

Construction Start Date 1/1/2014 In Service Date Completion Date 6/30/2015 Page 1

List Interim In-Service Dates

Project Need Justification

This project upgrades our current SalesLogix application and database to a current, vendor supported platform. Our current version of SalesLogix is residing on Windows 2003 server operating system. Microsoft's support of Windows 2003 server ends in June 2015. Our current version of SalesLogix will not work on the new Windows 2008 or 2012 server operating systems, which are our new Company standards.

Project Alternatives

Implement this SalesLogixs upgrade or loss functionality once Windows is upgraded.

Technical Aspects

Software procurement and implementation. Implementation will include all phases of quality assurance testing before the system is placed into production.

Project No: 94229714 IT Small Sized Projects

Company: 007
Location: 942

Project Information

Construction Start Date 6/1/2015 In Service Date Completion Date 12/31/2015 Page 1

List Interim In-Service Dates

Project Need Justification

This project covers the development of IT solutions that we get from various business units throughout the year that are needed to improve operations, make work processes more efficient, and cut costs. This annual project ensures we have dollars available to handle these very frequent and on-going requests. This project directly supports our Company's continuous improvement efforts as we strive to gain efficiencies, reduce costs and improve operations, which saves our customers money.

Project Alternatives

Continue to have funds to cover these on-going requests for small IT solutions, or do nothing.

Technical Aspects

Varying hardware, software, and implementation support solutions driven by business unit requests. Implementation includes all phases of quality assurance testing before systems are placed into production.

Project No: 94230014 Deming Construction Ctr. Security Equipment

Company: 007
Location: 942

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date 9/30/2014 Page 1

List Interim In-Service Dates

Project Need Justification

All security equipment (CCTV) at the Deming Construction Center is outdated and is no longer capable of being repaired. The current equipment is unreliable and could fail, resulting in increased safety and security risks. The new equipment will be a Video Management System with new cameras that will eventually tie into the Security Operations Center at Albuquerque Downtown Headquarters where the facility can be monitored remotely.

Project Alternatives

The alternative is to maintain the current system and repair security equipment as breakdown occurs. This is not a realistic alternative since the facility security is already unreliable and the facility cannot be monitored by Albuquerque Downtown Headquarters security operations control staff.

Technical Aspects

This project will entail replacing wiring, cameras, and controls for the building security system.

Project No: 94230714 Santa Fe Building Improvement Contingency

Company: 007
Location: 942

Project Information

Construction Start Date 2/1/2014 In Service Date Completion Date 12/31/2014 Page 1

List Interim In-Service Dates

Project Need Justification

This project is a wedge/placeholder in the 2014 budget for possible building system improvements. During Q1 2014, this project was identified for upgrades to the Santa Fe Service Center Engineering building including flooring, wall coverings, new furniture (include instituting space standards), lighting, break room and restroom upgrades. The current building is very dated with high visibility by public and community representatives. The current furniture and layout is dated and past its useful life and is not ergonomic.

Project Alternatives

Alternatives include 1) leaving the facility as it currently is laid out which does not include ergonomics or efficient work flow for the teams, or 2) doing a partial renovation.

Technical Aspects

This project includes renovation of flooring, walls, plumbing and fixtures, restroom updates, and office furniture replacement to provide ergonomic work stations.

Project No: 94230815 Santa Fe Building Improvements

Company: 007
Location: 942

Project Information

Construction Start Date 5/1/2015 In Service Date Completion Date 12/31/2015 Page 1

List Interim In-Service Dates

Project Need Justification

This 2015 project includes replacement of three roofs at the Santa Fe Service Center complex and replacement of the building automation system. These replacements will ensure the building's integrity and provide an increased comfortable work environment. The current roofs are in disrepair and are being patched as needed. The building automation system is outdated and needs replacement for building environmental efficiency.

Project Alternatives

The alternative is to continue to patch the roof and do repairs as they come up until funding is available. Thee temporary fixes do not last long and result in more serious damage to the building when faults are finally discovered.

Technical Aspects

The technical aspects of the roof and building automation project will be identified after vendor meetings and determination of project scope.

Project No: 94230914 Edith Svc Center Building Improvement Contingency

Company: 007
Location: 942

Project Information

Construction Start Date 1/1/2014 In Service Date Completion Date 12/31/2014 Page 1

List Interim In-Service Dates

Project Need Justification

This project is a wedge for anticipated building improvement projects at the Edith Service Center. Upon identification of a building system needing replacement (i.e., roof, HVAC, etc.), an individual request would be made and a separate Capital account set up.

Project Alternatives

These funds would be utilized upon identification of a building improvement necessary to sustain the structure. If no items are identified, these funds will not be utilized.

Technical Aspects

The technical aspects of each project will be submitted with the individual proposals.

Project No: 94231614 ESC Admin Lift

Company: 007
Location: 942

Project Information

Construction Start Date 5/13/2014 In Service Date Completion Date 12/31/2014 Page 1

List Interim In-Service Dates

Project Need Justification

This project will add an enclosed lift to the Edith Service Center Admin building. This equipment will allow for more efficient use of the second floor area by providing full access requirements and would also allow for easier furniture and other product deliveries.

Project Alternatives

The alternative is to continue to use the stairways to transport items to the second floor (adds risk to both PNM personnel but also increases the likelihood that the item being move will be damaged) and only be able to schedule schedule meetings on the first floor for employees and guests that are unable to navigate stairs.

Technical Aspects

Moving the southeast door and installing an enclosed elevator system on the outside of the building where the door is presently is located.

Projects with clearings in 2015 and 2016, Budget data for 2015 - 2019

Project No: 94231816 Wedge Project

Company: 007
Location: 942

Project Information

Construction Start Date 1/1/2016 In Service Date Completion Date 12/31/2014 Page 1

List Interim In-Service Dates

Project Need Justification

This wedge account is for building improvement projects in 2016 that will be identified as breakdown maintenance or equipment failure occurs. Each individual project will be requested through a CDAP and individual project number. These projects could include a building system (HVAC, roofing, plumbing. etc.) but have not been identified during the 2015 budget cycle. If these funds are not needed, this money will/can be reallocated by the PNM Budget Department.

Project Alternatives

Project alternatives will be presented as an individual project request is made. If the funds are not needed, they will be reallocated by the PNM Budget Department.

Technical Aspects

The technical aspects of each project will be identified when the request is submitted.

Project No: 94231914 Silver City Ruidoso Security Equipment

Company: 007
Location: 942

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date 12/31/2014 Page 1

List Interim In-Service Dates

Project Need Justification

All security equipment (CCTV) at the Silver City and Ruidoso offices is outdated and is no longer capable of being repaired. The current equipment is unreliable and could fail, resulting in increased safety risks. The new equipment will be a Video Management system with cameras that will eventually tie into the Security Operations Center at Albuquerque Downtown Headquarters where the facilities can be monitored.

Project Alternatives

The alternative is to maintain the current system and repair as breakdown occurs. This will not provide increased security and Albuquerque Downtown Headquarters' security operations center personnel will not be able to monitor the facility.

Technical Aspects

This project will replace wiring, cameras, and controls for the building security system.

Project No: 94233315 Santa Fe Security Equipment Upgrades

Company: 007
Location: 942

Project Information

Construction Start Date 8/1/2015 In Service Date Completion Date 12/31/2015

List Interim In-Service Dates

Project Need Justification

This project is a wedge/placeholder in the 2015 budget for possible building security system improvements. This facility needs perimeter cameras to replace the broken ones as well as add additional cameras in order to better secure and monitor the areas. The project would also include fence replacement as the fence is more than 20 years old and is weathered and cannot adequately secure the site. The exact specifications have not been identified at this time.

Project Alternatives

The alternative is to maintain the current cameras and fence that are in place at this time, or do a partial replacement. The current equipment does not thoroughly maintain perimeter and site security. A partial replacement only addresses a portion of the problem and would require additional investment in the future. The preferred solution is to install all of the cameras and fence at the same time.

Technical Aspects

The exact specifications have not been identified at this time. They will be identified after a vendor site visit.

Project No: 94628011 Zainet Upgrade - PNM (formally Zainet Upgrade - PNM (2011))

Company: 007
Location: 946

Project Information

Construction Start Date 2/1/2012 In Service Date Completion Date 12/31/2013 Page 1

List Interim In-Service Dates

Project Need Justification

This project upgrades our current ZaiNet system to a new, vendor supported product. Our current system is at end of life and is no longer supported by the vendor. This introduces security and supportability risks that we need to mitigate. Additionally, new product versions provide added functionality that we see as having value to our company. .

Project Alternatives

Implement project to upgrade us to latest vendor supported ZaiNet product, or stay on current platform and risk loss of support, potential security implications, and inability to integrate with newer applications.

Technical Aspects

Software product procurement and implementation. Implementation will include interfaces with other Company systems as well as completing all phases on Quality Assurance testing before placing the system into production.

Project No: 94628013 ETRM

Company: 007
Location: 946

Project Information

Construction Start Date 9/9/2013 In Service Date Completion Date 1/30/2015 Page 1

List Interim In-Service Dates

Project Need Justification

This project replaces our current ZaiNet system with a new, vendor supported product. Our current system is at end of life and is no longer supported by the vendor. This introduces security and supportability risks that we need to mitigate. Additionally, a new selected product provides added functionality that we see as adding value to our company.

Project Alternatives

Implement replacement of ZaiNet system or do nothing.

Technical Aspects

Hardware to host the new application, software licenses for new application, internal/external labor, development of interfaces and reports

Project No: 94628114 Perimeter LAN Device Replacement

Company: 007
Location: 946

Project Information

Construction Start Date 10/24/2013 In Service Date Completion Date 12/31/2014 Page 1

List Interim In-Service Dates

Project Need Justification

This project replaces end of life network hardware supporting our Power Operations area. Implementing this project will bring these components up to new and supported hardware standards which will minimize the risk that these network hardware components will fail at the critical facility.

Project Alternatives

Implement this network hardware replacement or do nothing.

Technical Aspects

Hardware procurement and implementation. Implementation will include all phases of quality assurance testing before these assets are placed into production.

Project No: 94628214 WPM Data Management Portal

Company: 007
Location: 946

Project Information

Construction Start Date 3/1/2016 In Service Date Completion Date 12/31/2016 Page 1

List Interim In-Service Dates

Project Need Justification

Create a data repository to store data from seven (7) PNM internal and external sources to support consolidated reporting for power and gas trading. The sources include but are not limited to: MRI, ZEMA, Pi Historian, QATU webJOU, OATI webTrader, NOAA weather data, FutureSource, Utility Margin's LOP modeling software, etc. In addition to the development of standard reports, the application will also support ad-hoc reporting and have a diary function. The report set, and/or dashboards, will include twenty-five plus (25+) reports currently produced daily, weekly, or monthly by Whole Sale Power Marketing. Today this information is distributed via email in spreadsheets or word documents from multiple staff with no single data source. This project will decrease the risk of non-compliance with NERC/FERC/SOX/SRSG/PUC Standards, Orders, or Requirements by creating and storing proper compliance documentation. The application will improve processes and support workflow efficiencies. In addition it will support the effort to reduce errors in reporting (Zero Defect).

Project Alternatives

As this was a very complex reporting/data collection problem, we were not able to discover a vendor who would be able to provide a solution. Using PNMR standard development tools it was determined that an internally developed solution would be more flexible, supportable, and cost efficient.

Technical Aspects

Internally developed software solution and implementation to include all phases of quality assurance testing before being placed into production.

Project No: 94628714 EASE Replacement

Company: 007
Location: 946

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date 12/31/2015 Page 1

List Interim In-Service Dates

Project Need Justification

The current EASE system used at NM Power Operations, which was internally developed many years ago, is outdated and is residing on an expensive hardware platform. The goals of this project are (a) procure and implement a new, lower cost hardware solution for the current EASE system to run on and (b) find a new off-the-shelf software solution to replace the current EASE product which is considered at end of life and costly to maintain. By implementing this project we will no longer need to continue to pay high maintenance costs on the current hardware platform, and it allows us to get a more stable system procured and put in place that aligns with other Power Operations systems and that is vendor supported which would significantly reduce staff overhead time needed to maintain the current EASE system.

Project Alternatives

Replace the current EASE hardware platform and product with a new, lower cost vendor supported systems or do nothing.

Technical Aspects

Hardware and software procurement and implementation to include all phases of quality assurance testing before being placed into production.

Project No: 94628915 WPM Unit Commitment Software

Company: 007
Location: 946

Project Information

Construction Start Date 4/1/2015 In Service Date Completion Date 12/31/2015 Page 1

List Interim In-Service Dates

Project Need Justification

This project provides our Wholesale Power Marketing (WPM) group with a Unit Commitment technology solution that would calculate the least-cost dispatch of available generation resources to meet the electrical load for the State. Being provided this solution would allow them take advantage of using technology to collect, process, calculate and store information that is needed to make real-time business decisions, rather than relying on manual processes and techniques that are more costly and less accurate.

Project Alternatives

Develop or purchase and implement this Unit Commitment software solution or continue with the current manual process.

Technical Aspects

Development or procurement of software product and implementation of this product to include all phases of quality assurance testing before being placed into production.

Project No: 94629515 SJGS Material Control System (MCS) Rewrite

Company: 007
Location: 946

Project Information

Construction Start Date 4/1/2015 In Service Date Completion Date 12/31/2016 Page 1

List Interim In-Service Dates

Project Need Justification

This project replaces the San Juan Generating Station warehouse Material Control System (MCS) to a new, supported system. The current MCS system is a complex interface that facilitates communication between the warehouse robotics system and PassPort system. This MCS is used for common PassPort warehouse transactions like cycle counts, issues, receipts, putaways, etc. Without this system, the San Juan warehouse would be completely crippled. There are two key concerns with the current system: (1) It was written using Borland C++ Builder. Borland is no longer a viable company and support for C++ Builder was taken over by a small organization whose future is uncertain; (2) It is uncertain whether or not the current version would run on Windows 7 which is PNMs current supported operating system. Proceeding with this project reduces a significant risk to our Company given that this robotics system is a critical component to San Juan Generating Station and it would present financial impacts to our Company if the system were down for any length of time.

Project Alternatives

Proceed with rewrite or replacement of the MCS or accept the risks mentioned in the justification section with the current system.

Technical Aspects

Software rewrite or replacement with off-the shelf software product, and implementation of the system to include all phases of quality assurance testing before going into production.

Project No: 94630814 Power Ops Building Improvement Contingency

Company: 007
Location: 946

Project Information

Construction Start Date 1/1/2014 In Service Date Completion Date 12/31/2014 Page 1

List Interim In-Service Dates

Project Need Justification

This project is a wedge project for potential Power Operations' building improvement projects. These projects are for replacement of systems (i.e., HVAC, roof, other building components) would be identified and funds requested as needed. A separate project number would be used for each project.

Project Alternatives

This wedge project will not be used if there are no identifiable building improvements needed.

Technical Aspects

The technical aspects will be identified as each project is determined.

Project No: 94728915 NERC CIP v5 Planning and Implementation

Company: 007
Location: 947

Project Information

Construction Start Date 2/1/2015 In Service Date Completion Date 12/31/2015 Page 1

List Interim In-Service Dates

Project Need Justification

This project has severable deliverables needed to align PNM with required NERC CIP v5 compliance including: (1) implementation of an Intrusion detection system for Power Operations and Wholesale Power Marketing for Energy Management and Generation Management systems; (2) expansion of SCADA devices to include serial communication protocols; (3) upgrade of our Identity Management system; and (4) upgrade of our C-Cure system. NERC CIP v5 compliance has been mandated by the Federal government and non-compliance with these mandates would result in significant financial penalty and reflect poorly on PNM.

Project Alternatives

None. NERC CIP v5 compliance is mandated by the Federal government.

Technical Aspects

Procurement and implementation of various hardware, software and support solutions to meet NERC CIP v5 technology standards. Implementation of these solutions will include all phases of quality assurance testing before being placed into production.

Project No: 94829915 NM ARCFM UPGRADE V. 10

Company: 007
Location: 948

Project Information

Construction Start Date 3/7/2014 In Service Date Completion Date 12/24/2014 Page 1

List Interim In-Service Dates

Project Need Justification

This project upgrades our current NM ArcFM hardware and software products which are end of life. Implementation of this upgrade will bring us to new, vendor supported standards. Additionally, we will be able to utilize the new capabilities and features of the updated software product, which will allow users to be more efficient in their daily use of this system.

Project Alternatives

Implement this NM ArcFM hardware and software replacement or do nothing.

Technical Aspects

Purchase and implement required hardware and software. Implementation will include all phases of Quality Assurance testing before this system in placed into production.

Project No: 95328015 ArcFM Texas Upgrade to v10.2

Company: 007
Location: 953

Project Information

Construction Start Date 2/1/2015 In Service Date Completion Date 12/31/2015 Page 1

List Interim In-Service Dates

Project Need Justification

This project will upgrade the TX ArcFM system to the newest software release, v10.2, which is the current version running on the NM ArcFM system. Performing this TX upgrade will align our two versions of ArcFM, which will reduce our required staff support time needed to maintain and troubleshoot two different software versions, and reduce costs overall.

Project Alternatives

Perform TX ArcFM v10.2 upgrade or do nothing.

Technical Aspects

Software procurement and implementation to include all phases of quality assurance testing before being placed into production.

Project No: 95430714 Deming- CCTV Security Equipment Upgrade

Company: 007
Location: 954

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date 12/31/2014 Page 1

List Interim In-Service Dates

Project Need Justification

All security equipment (CCTV) at the Deming office is outdated and is no longer capable of being repaired. The current equipment is unreliable and could prevent a safety risk. The new equipment will be a Video Management system with new cameras that will eventually tie into the Security Operations Center at Albuquerque Downtown Headquarters where the facility can be monitored.

Project Alternatives

The alternative is to maintain the current system and repair as breakdown occurs. At this time, the facility security is unreliable and may prevent a safety hazard, and the facility cannot be monitored at Albuquerque Downtown Headquarters security operations center staff.

Technical Aspects

This project will replace wiring, cameras, and controls for the building security system.

Project No: 95430814 Alamogordo Office CCTV Security Equipment Upgrade

Company: 007
Location: 954

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date 12/31/2014 Page 1

List Interim In-Service Dates

Project Need Justification

All security equipment (CCTV) at the Alamogordo office is outdated and is no longer capable of being repaired. The current equipment is unreliable and could fail, resulting in increased safety and security risks. The new equipment will be a Video Management system with cameras that will eventually tie into the Security Operations Center at Albuquerque Downtown Headquarters where the facility can be monitored.

Project Alternatives

The alternative is to maintain the current system and repair as breakdown occurs. At this time, the facility security is unreliable and may prevent a safety hazard. The facility cannot be monitored by Albuquerque Downtown Headquarters security operations center staff.

Technical Aspects

This project will replace wiring, cameras, and controls for the building security system.

Project No: 95431514 LV Asphalt Replacement

Company: 001
Location: 954

Project Information

Construction Start Date 5/13/2014 In Service Date Completion Date 12/31/2014 Page 1

List Interim In-Service Dates

Project Need Justification

This project includes the removal and replacement of the existing building perimeter asphalt as Las Vegas. The warehouse and truck storage buildings were built on existing grade and as a result water flows towards rather than away from the building. This water flow issue damages the asphalt and could potentially damage the building's foundation.

Project Alternatives

The alternative is to manually remove the snow and water when it is present. Even if this was the decided upon course of action, the asphalt will continue to crack and erode unless it is replaced.

Technical Aspects

Removal and replacement of the asphalt.

Project No: 96328314 NM Voice System Replacement

Company: 007
Location: 963

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date 6/2/2015 Page 1

List Interim In-Service Dates

Project Need Justification

New Mexico Voice system replacement is being done to replace old, out of date, unmaintainable, immobile PBX and key systems with modern Voice of Internet Protocol (VOIP) technology. All of the PNM PBX and Key systems around the State of NM are hardware oriented systems 15 years old and older, are fully depreciated, and are not supported by the product vendors. Migrating to VOIP technology will reduce overall costs and provide us greater mobility, flexibility, and superior performance.

Project Alternatives

Replace the old telephone switch residing and supporting PNM downtown Albuquerque operations or continue to use older, unsupported, and costly to maintain equipment.

Technical Aspects

Procure and implement a new hardware and software telephony solution. Implementation will include all phases of quality assurance testing before being placed into production.

Project No: 96328412 Computer Platform Refresh-Telecom Blanket 2014

Company: 007
Location: 963

Project Information

Construction Start Date 3/1/2014 In Service Date Completion Date 2/14/2015 Page 1

List Interim In-Service Dates

Project Need Justification

This project is an annual refresh of various telecommunications hardware such as routers, bridges and switches that are at end of life & warranty, which is typically 5 years in service. This is an on-going refresh of telecommunications equipment that accounts for approximately of 20% of our in-use assets. As such, value of the assets is maintained through regular reinvestment. Each year, telecommunications hardware remains in service beyond it's useful life (Utility Value), yielding a diminishing marginal utility. Eventually, operational expenses become greater than the remaining utility value of the asset.

Project Alternatives

Implement this annual telecommunications asset refresh or do nothing.

Technical Aspects

Procurement and replacement of outdated telecommunications hardware throughout New Mexico service territories.

Project No: 96329916 Telecom New Technology - B

Company: 007
Location: 963

Project Information

Construction Start Date 6/1/2016 In Service Date Completion Date 12/31/2016 Page 1

List Interim In-Service Dates

Project Need Justification

This project refreshes telecom equipment located throughout our NM and TX service and support territories to the latest supported standards. These telecom assets, as with any technology, reach end of life or abruptly fail, and this project ensures we keep these assets up-to-date so our telecommunications system downtime is held to an absolute minimum.

Project Alternatives

Proceed with on-going implementation of this project or do nothing.

Technical Aspects

Hardware procurement and implementation of various hardware component replacements (including SCADA) throughout NM and TX. Implementation will include all phases of quality assurance testing prior to placing the systems into production.

Project No: 96428011 Computer Platform Refresh-PCs Blanket

Company: 007
Location: 964

Project Information

Construction Start Date 2/1/2015 In Service Date Completion Date 12/31/2015 Page 1

List Interim In-Service Dates

Project Need Justification

This project is part of PNM's 2015 annual refresh of approximately 20% of its PC and laptop equipment that is five years of age and near the end of its life and/or no longer covered by warranty. This equipment is needed in order to ensure that employees are working on up to date systems that are under warranty. Furthermore, it is costly to provide ongoing maintenance and support to aged computer equipment/system.

Project Alternatives

Implement this annual PC and laptop refresh of do nothing. The do nothing option is not deemed viable as the equipment being replaced is near the end of its useful life and no longer under warranty.

Technical Aspects

Procurement and replacement of outdated PC and laptop assets

Project No: 96428115 Password Self-Service

Company: 007
Location: 964

Project Information

Construction Start Date 6/1/2015 In Service Date Completion Date 12/31/2015 Page 1

List Interim In-Service Dates

Project Need Justification

This project provides integration to our Active Directory system through a web portal, and will be a standardized tool that users can access to reset their own network passwords rather than calling into the help desk to complete this action. The help desk staff currently spends many hours a day performing these resets and from an efficiency and cost-savings standpoint, we believe this function needs to be decentralized down to all network users.

Project Alternatives

Create this password reset integration tool or do nothing.

Technical Aspects

Design and implementation of a standardized web portal tool to allow network users to reset their passwords. Implementation will include all phases of quality assurance testing before being placed into production.

Project No: 96433114 Computer Platform Refresh

Company: 007
Location: 964

Project Information

Construction Start Date 3/1/2014 In Service Date Completion Date 2/14/2015 Page 1

List Interim In-Service Dates

Project Need Justification

This project is part of PNM's 2014 annual refresh of approximately 20% of its PC and laptop equipment that is five years of age and near the end of its life and/or no longer covered by warranty. This equipment is needed in order to ensure that employees are working on up to date systems that are under warranty. Furthermore, it is costly to provide ongoing maintenance and support to aged computer equipment/system.

Project Alternatives

Implement this annual PC and laptop refresh of do nothing. The do nothing option is not deemed viable as the equipment being replaced is near the end of its useful life and no longer under warranty.

Technical Aspects

Procurement and replacement of outdated PC and laptop assets

Project No: 96828014 Continuous Improvements Technology Enhancements

Company: 007
Location: 968

Project Information

Construction Start Date 4/1/2015 In Service Date Completion Date 12/31/2015

List Interim In-Service Dates

Project Need Justification

This project improves operations and makes work processes more efficient by aligning technology hardware standards used by operational areas and IT to a common supported hardware. This project also involves implementing new technologies and work processes that will improve outage communications notifications and timing to our customers. Implementing these new solutions will enhance focus on our customers by improving outage communications and will also reduce costs via standardizing the type of hardware we procure and maintain.

Project Alternatives

Implement these continuous improvement technology enhancements or do nothing.

Technical Aspects

Varying hardware, software and implementation support solutions. Implementation includes all phases of quality assurance testing before systems are placed into production.

Project No: 96828016 Load Balancer Replacement

Company: 007
Location: 968

Project Information

Construction Start Date 6/1/2016 In Service Date Completion Date 12/31/2016 Page 1

List Interim In-Service Dates

Project Need Justification

This project replaces/refreshes existing load balancer hardware with new, current technology. Load balancers are designed to distribute computing workload across network components so all networking equipment works equally, with no single units being "over taxed". Regular refresh of these assets directly contributes to providing minimal downtown to Company-critical systems.

Project Alternatives

Regularly refresh our load balancer hardware components or do nothing.

Technical Aspects

Hardware and software procurement and implementation. Implementation will include all phases of quality assurance testing before being placed into production.

Project No: 96828115 MS Exchange Upgrade

Company: 007
Location: 968

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date 12/31/2015 Page 1

List Interim In-Service Dates

Project Need Justification

This project upgrades our current Microsoft Enterprise Exchange 2010 to the latest vendor supported product, Microsoft Enterprise Exchange 2013. This project is part of our Lifecycle Management program. Remaining on an unsupported platform introduces IT security concerns since product is at end of life and no longer supported by Microsoft. Upgrading to this new platform ensures this system remains both secure and supported.

Project Alternatives

Upgrade to Microsoft Enterprise Exchange 2013 or do nothing.

Technical Aspects

Software procurement and implementation. Implementation will include all phases of Quality Assurance testing before the system is placed into production.

Project No: 96828116 Requirements Management Tool

Company: 007
Location: 968

Project Information

Construction Start Date 2/1/2015 In Service Date Completion Date 12/31/2015 Page 1

List Interim In-Service Dates

Project Need Justification

The project procures and implements a low-cost Requirements Management Tool that will be used by all IT Business Analysts during the requirements gathering and documentation stages. Many requirements gathered by business analysts are common and repetitive. Having a standard, low-cost solution to manage these requirements would allow cut and paste re-use of these repetitive requirements which would improve staff and cost efficiency.

Project Alternatives

Procure and implement this tool or do nothing.

Technical Aspects

Procurement of software solution and implementation of the product, which will include all phases of quality assurance testing before being placed into production.

Project No: 96828211 Computer Platform Refresh (CPR) Servers/Storage Blanket

Company: 007
Location: 968

Project Information

Construction Start Date 2/1/2015 In Service Date Completion Date 12/31/2015 Page 1

List Interim In-Service Dates

Project Need Justification

This project is an annual refresh of server and storage assets that are at end of life and out of warranty. As such, value of the assets are maintained through regular reinvestment and refreshes. Servers and storage hardware are critical Company assets, and from a risk management perspective, we need these hardware components to be current and under vendor support.

Project Alternatives

Implement these annual refreshes of outdated server and storage hardware or do nothing.

Technical Aspects

Hardware procurement and replacement implementation. Implementation will include all phases of Quality Assurance testing before these assets are placed into production.

Project No: 96828215 Enterprise Data Storage Refresh (Aztec Data Center

Company: 007
Location: 968

Project Information

Construction Start Date 8/1/2014 In Service Date Completion Date 12/31/2015 Page 1

List Interim In-Service Dates

Project Need Justification

This project replaces old data storage assets that are nearing end of life and support. Data availability and integrity are critical components for system access and reliability, and without reliable vendor-supported data storage we have an increasing risk of losing critical system data, accesses and functionality.

Project Alternatives

Procure and implement new data storage components or do nothing.

Technical Aspects

Hardware and software procurement and implementation, to include all phases of quality assurance testing before being placed into production.

Project No: 96828216 Enporium Replacement

Company: 007
Location: 968

Project Information

Construction Start Date 2/1/2015 In Service Date Completion Date 12/31/2015 Page 1

List Interim In-Service Dates

Project Need Justification

This project builds in-house functionality to replace the data transformation services provided by a company called Enporion, for purchase orders and invoices sent from and received in PeopleSoft eProcurement and Passport systems. Implementing this in-house solution would allow us to terminate our contract with Enporion that costs approximately $80,000.00 per year.

Project Alternatives

Design and implement an in-house solution to replace Emporium functionality or do nothing.

Technical Aspects

Develop and implement a hardware and software solution which will include all phases of quality assurance testing before being placed into production.

Project No: 96828217 Migrate Selected Record Libraries from DM to Share

Company: 007
Location: 968

Project Information

Construction Start Date 5/1/2016 In Service Date Completion Date 12/31/2016

List Interim In-Service Dates

Project Need Justification

This project is one of several initiatives needed to provide the Company with a Governance model, current to future roadmap, and processes, techniques, and related technologies to effectively manage all Company records in a standardized and consistent manner. Proceeding with this project will significantly mitigate identified risks pertaining to inconsistent information management processes, and timely and accurate response to record retrieval requests. The specific scope of this project is to develop a SharePoint and FileShares system to accommodate having an acceptable form of managing records and to port over identified records to SharePoint from our Document Management system.

Project Alternatives

Procure and implement new SharePoint 2013 functionality and migrate records from our Document Management system for easier management of these records, or do nothing.

Technical Aspects

Procure and implement SharePoint solution and port over all identified records from our Document Management system. Implementation will include all phases of quality assurance testing before being placed into production.

Project No: 96828316 Information Security New Technology- 2016

Company: 007
Location: 968

Project Information

Construction Start Date 10/1/2016 In Service Date Completion Date 12/31/2016 Page 1

List Interim In-Service Dates

Project Need Justification

This project implements new IT security tools needed to keep our network and critical systems secure from viruses, network intrusions, and malware. We always need to assess our potential system vulnerabilities and purchase and deploy security tools and measures to ensure our systems and related data are not compromised. If our systems were vulnerable, we would have a significant risk which could have a severe financial impact to the Company and negative public imaging.

Project Alternatives

None. These security tools are needed to ensure our systems and data are not compromised thru cyber- attacks. We regularly assess and procure new IT security tools to counter new and growing cyber security threats. These threats change frequently, as do the preventative tools available on the market to counter these threats.

Technical Aspects

Procurement and implementation of new hardware and software designed to secure IT systems and data. Implementation will include all phases of Quality Assurance testing before placing them into production.

Project No: 96828323 Host-Based Intrusion Detection System

Company: 007
Location: 968

Project Information

Construction Start Date 4/1/2015 In Service Date Completion Date 12/31/2015 Page 1

List Interim In-Service Dates

Project Need Justification

Host based Intrusion Detection software will be evaluated, purchased, installed onto appropriate server systems in the PNMR infrastructure environment. This will reduce risk of system compromise and potential impact to data Confidentiality, Integrity, and availability and will add an additional level of server protection that currently does not exist. This system will help us meet the growing internet threat trend. and will enable improved capability to prove compliance with regulatory requirements (SOX, HIPAA, etc.)

Project Alternatives

None. This security tool is needed to ensure our systems and data are not compromised thru cyber-attacks. There are many products on the market. We will ensure we get the product that meets our needs at the best possible cost.

Technical Aspects

Procurement and implementation of new hardware and software designed to secure IT systems and data. Implementation will include all phases of Quality Assurance testing before being placed into production.

Project No: 96828416 MS Windows 2003 Server Upgrade

Company: 007
Location: 968

Project Information

Construction Start Date 1/15/2015 In Service Date Completion Date 12/31/2015 Page 1

List Interim In-Service Dates

Project Need Justification

This project updates our Windows Server 2003 operating systems to newer, supported Windows 2008 or 2012 versions. These updates are required as part of our lifecycle management program, which ensures we are operating on current Microsoft supported systems. Windows 2003 Server support ends in June 2015, at which time Microsoft will no longer be providing updates or security patches for this retired operating system version, which would make us vulnerable for network intrusions or cyber-attacks.

Project Alternatives

None. Implementing to Microsoft Server 2008 or 2012 operating system upgrades will ensure we have Microsoft support on our systems, and that we maintain the proper security patches needed to keep these systems secure.

Technical Aspects

Operating system upgrades to all current Microsoft Server 2003 systems, which will bring us up to current supported versions. Implementation will include all phases of Quality Assurance testing before being placed in production.

Project No: 96828514 Desktop of the Future 2014

Company: 007
Location: 968

Project Information

Construction Start Date 1/15/2014 In Service Date Completion Date 12/31/2014 Page 1

List Interim In-Service Dates

Project Need Justification

The purpose of this project is to upgrade existing applications and system architecture tools and technologies to meet standard on-going support needs requested by the business. Implementation of this project will ensure that our technology architecture stays current and aligns with new technology standards that have been approved by the Enterprise Architecture Solutions Board.

Project Alternatives

Implement Enterprise Applications and System Architecture upgrades, or do nothing.

Technical Aspects

Procurement and implementation of related applications and tools. Implementation will include all phases on Quality Assurance testing before systems are placed in production.

Project No: 96828516 MS Sharepoint 2016

Company: 007
Location: 968

Project Information

Construction Start Date 2/1/2015 In Service Date Completion Date 12/31/2015 Page 1

List Interim In-Service Dates

Project Need Justification

This project upgrades Microsoft SharePoint version 2013 to version 2016. This effort is part of PNMR's lifecycle management program, which ensures its systems are running on up-to-date, vendor supported platforms. Additionally, PNMR will be able to utilize the new capabilities and features of the updated product, which will allow users to be more efficient in their daily use of this system.

Project Alternatives

Upgrade from Microsoft SharePoint 2013 to version 2016 or do nothing.

Technical Aspects

Software procurement and implementation. Implementation will include all phases of quality assurance testing before the system will be placed into production.

Project No: 96828517 Desktop & Mobility of the Future Wkforce

Company: 007
Location: 968

Project Information

Construction Start Date 1/15/2015 In Service Date Completion Date 2/27/2015 Page 1

List Interim In-Service Dates

Project Need Justification

This project updates all PCs and laptops from unsupported Microsoft Windows XP operating systems and Microsoft Office 2003 products to Microsoft Windows 7 and Microsoft Office 2010 products. Current XP and Office 2003 systems are no longer supported by Microsoft, therefore users are no longer getting security updates and patches needed to keep these systems secure and free from security vulnerabilities and cyber-attacks. If IT systems are vulnerable, PNMR will be at a significant risk of cyber-attack which could have a severe financial impact.

Project Alternatives

None. Upgrading to the latest supported Microsoft operating systems and Office suite products will ensure that IT systems and data are not compromised thru cyber-attacks.

Technical Aspects

Software procurement and implementation. Implementation will include all phases of quality assurance testing before we place these systems into production.

Project No: 96828615 Enterprise Firewall Replacement

Company: 007
Location: 968

Project Information

Construction Start Date 7/1/2016 In Service Date Completion Date 12/31/2016 Page 1

List Interim In-Service Dates

Project Need Justification

This project implements next generation enterprise Internet firewalls for Albuquerque & Las Colinas Internet gateways, to protect against emerging advanced persistent Internet-based security threats. Implementing this project allows us to maintain a high level of IT security to enable continued business operations.

Project Alternatives

Replace existing enterprise firewalls or do nothing.

Technical Aspects

Hardware and software procurement and implementation. Implementation will include all phases of quality assurance testing before the systems are placed into production.

Project No: 96828716 Implement Records Management Functionality in Shar

Company: 007
Location: 968

Project Information

Construction Start Date 2/1/2015 In Service Date Completion Date 12/31/2015 Page 1

List Interim In-Service Dates

Project Need Justification

This project implements SharePoint 2013 functionality and capabilities to the Records Management business area. Once this system is in place, migration of data records from the current Document Management system can begin. The current Document Management system lacks some basic functionary that the business users require. This low-cost solution to implement SharePoint 2013 will improve employee efficiency and reduce costs.

Project Alternatives

Implement SharePoint 2013 functionality or do nothing.

Technical Aspects

Software procurement and implementation. Implementation will include all phases of quality assurance testing before this system in placed in production.

Project No: 96828813 HPUX Platform Upgrade 2013

Company: 007
Location: 968

Project Information

Construction Start Date 1/15/2014 In Service Date Completion Date 2/24/2015 Page 1

List Interim In-Service Dates

Project Need Justification

Risk of legal documents being tampered with and not noticed

Project Alternatives

Solution not determined

Technical Aspects

Some hardware/software may be required

Project No: 96828814 Corporate Safety Metric Dashboard

Company: 007
Location: 968

Project Information

Construction Start Date 4/1/2015 In Service Date Completion Date 12/31/2015 Page 1

List Interim In-Service Dates

Project Need Justification

This project replaces manual data consolidation and scorecard development with a Business Intelligence application that automates data collection, provides data entry, administration functionality, and displays results within the NetSource portal. Implementation of this project supports the strategic goal of achieving industry-leading safety performance.

Project Alternatives

Design and implement this Corporate Safety Metric Dashboard, or do nothing.

Technical Aspects

Involves software design and implementation. Implementation includes interfacing the system with the Intranet (Netsource), and will include all phases of quality assurance testing before the system is placed into production.

Project No: 96828816 Tech Upgrade - Apps 1

Company: 007
Location: 968

Project Information

Construction Start Date 9/1/2015 In Service Date Completion Date 12/31/2015 Page 1

List Interim In-Service Dates

Project Need Justification

This project migrates the MRI data warehouse, Transmission Outage, and ZEMA applications from Microsoft Server version 2003 to version 2012. Additionally, PNM will move the databases for these applications from UNIX environments to Linux virtual servers and upgrade to Oracle version 11gR2. The key drivers for this project is that Microsoft Server 2003 and our current version of Oracle will no longer be supported by these product vendors as of June 2015, If not implemented, PNMR would be at an increased IT security risk.

Project Alternatives

None. Implementing to Microsoft Server 2012 operating system and Oracle 11gR2 versions will ensure we have Microsoft and Oracle support on our systems, and that we maintain the proper security patches needed to keep these systems secure from network intrusions or cyber-attacks.

Technical Aspects

Move these three applications from Microsoft Server 2003 to Microsoft Server 2012; migrate systems from UNIX to Linux virtual servers; upgrade the database server supporting these applications to Oracle 11gR2. Implementation will include all phases of quality assurance testing before these systems are placed in production.

Project No: 96828914 Event Monitoring Tools

Company: 007
Location: 968

Project Information

Construction Start Date 7/1/2016 In Service Date Completion Date 12/31/2016 Page 1

List Interim In-Service Dates

Project Need Justification

This project implements and integrates event monitoring systems to enable PNM to analyze, detect, and respond to unauthorized use or intrusion into corporate systems. Implementation of this project will reduce the risk of security incidents that could result in lost productivity and regulatory impact.

Project Alternatives

Implement Event Monitoring Tools or do nothing

Technical Aspects

Procurement and implementation of Event Monitoring Tools. Implementation will include interfacing these tools with other corporate systems, and will also include all phases of quality assurance testing before the system is placed into production.

Project No: 96828923 Supplier Portal

Company: 007
Location: 968

Project Information

Construction Start Date 4/1/2015 In Service Date Completion Date 12/31/2015 Page 1

List Interim In-Service Dates

Project Need Justification

This project involves procuring or internally developing a portal into PNMR systems (such as PeopleSoft) that will allow vendors to enter W9s, view invoice payment schedules, enter e-invoices and payments, collaborate on RFQs/RFPs, contracts, and view other contract-related data. These processes are currently performed manually. By automating this process efficiency gains and cost savings will be realized.

Project Alternatives

The options are build or procure this supplier portal or do nothing.

Technical Aspects

Build or procure, and implement Supplier software portal. Implementation will include all phases of Quality Assurance testing before the system in placed into production

Project No: 96829114 E-Mail Archive and E-Discovery Tool Upgrade/Refresh

Company: 007
Location: 968

Project Information

Construction Start Date 9/1/2014 In Service Date Completion Date 12/31/2015 Page 1

List Interim In-Service Dates

Project Need Justification

This project replaces the current Mimosa e-mail archive tool which has fully depreciated, is at end of life, and does not have the functionality that is need from this tool. As a result, the Infrastructure team has requested this project to replace the current tool with a newer, more fully functional system that will improve user efficiency and reduce overall costs related to management of e-mail archive data records.

Project Alternatives

Replace the current Mimosa e-mail archive tool of do nothing.

Technical Aspects

Procure and implement hardware and software for Mimosa system replacement. Implementation will include all phases of quality assurance testing before placing this system into production.

Project No: 96829115 Enterprise Business Intelligence Upgrade

Company: 007
Location: 968

Project Information

Construction Start Date 5/1/2015 In Service Date Completion Date 12/31/2015 Page 1

List Interim In-Service Dates

Project Need Justification

This project upgrades the existing, fully depreciated Business Intelligence (BI) platform/architecture to the latest system. This upgrade will allow us to take advantage of new technology advances in Business Intelligence products. The current BI system has greatly improved PNM's ability to provide modeling, reporting, and analytical capabilities to varying lines of business and ultimately allow these business areas to work more efficiently and cost-effectively. Moving to a newer, more robust system will allow us to provide more in-depth capabilities and system outputs to users.

Project Alternatives

Upgrade the existing Business Intelligence platform/architecture to the latest release or do nothing.

Technical Aspects

Procure and implement new Business Intelligence system hardware and software. Implementation will include all phases of quality assurance testing before the system is placed into production.

Project No: 96829116 Tech Upgrade - Infra 2

Company: 007
Location: 968

Project Information

Construction Start Date 2/1/2015 In Service Date Completion Date 12/31/2015 Page 1

List Interim In-Service Dates

Project Need Justification

This project upgrades the Java and Crystal Report systems residing on PNMR's Microsoft server operating systems. Upgrades of these systems are necessary based on the fact that the current versions are compatible with Microsoft Server 2003 operating systems only, which will be at end of life and no longer supported by Microsoft as of June 2015. This project entails moving to newer versions of Java and Crystal Reports that are compatible with Microsoft Server 2008 and 2012, which PNMR will be transitioning to in the near future.

Project Alternatives

None. Current versions of Java and Crystal Report will not work with Microsoft Servers 2008 or 2012 versions, which are the server operating systems PNMR will moving to because Microsoft Server 2003 is approaching its end of life/end of support.

Technical Aspects

Procure and implement Java and Crystal Reports software. Implementation will include all phases of quality assurance testing before the systems go into production.

Project No: 96829214 CPR Server 2014

Company: 007
Location: 968

Project Information

Construction Start Date 1/1/2014 In Service Date Completion Date 2/15/2015 Page 1

List Interim In-Service Dates

Project Need Justification

This project is an annual refresh of server and storage assets that are at the end of life and no longer under warranty. In response the value of these assets are maintained through regular reinvestment and refreshes. Servers and storage hardware are critical Company assets, and from a risk management perspective, these hardware components must be current and under vendor support.

Project Alternatives

Implement these annual refreshes of outdated server and storage hardware or do nothing.

Technical Aspects

Hardware procurement and replacement implementation. Implementation will include all phases of quality assurance testing before these assets are placed into production.

Project No: 96829216 'HPQC Upgrade

Company: 007
Location: 968

Project Information

Construction Start Date 2/1/2015 In Service Date Completion Date 4/30/2015 Page 1

List Interim In-Service Dates

Project Need Justification

This project involves upgrading the current HP Quality Center tool to the latest, supported platform. The current system resides on a hardware server that runs the Microsoft Server 2003 operating system, which will be at end of life and no longer supported as of June 2015. The current version of HP Quality Center will not work with Microsoft Server 2008 or 2012 operating systems, which PNM will be transitioning to in 2015.

Project Alternatives

Research was conducted by Gartner and Forrested that examined several similar tools on the market. HP Quality Center continues to be in the top quartile, and based on the fact that the company's on-shore and off-shore test team are familiar with the HP tool, and the fact that a significant price break was offered from the HP vendor if this upgrade was performed, the new version of HP Quality Center was the chosen solution.

Technical Aspects

Hardware and software procurement and implementation. Implementation will include all phases of quality assurance testing before the system in placed in production.

Project No: 96829222 Network Access Control

Company: 007
Location: 968

Project Information

Construction Start Date 4/1/2015 In Service Date Completion Date 12/31/2015 Page 1

List Interim In-Service Dates

Project Need Justification

This project involves the procurement, deployment, and integration of a Network Access Control platform for remote device access based on current IT security policies, and standards for minimum endpoint security requirements (e.g., antivirus, endpoint firewalls and other security controls). Implementing this project enhances PNM's Cybersecurity Risk Management Program.

Project Alternatives

Implement this Network Access Control platform or do nothing.

Technical Aspects

Procure and implement hardware and software systems. Implementation will include all phases of quality assurance testing before the system in placed into production.

Project No: 96829312 Core SAN Switch Refresh

Company: 007
Location: 968

Project Information

Construction Start Date 3/1/2015 In Service Date Completion Date 12/31/2015 Page 1

List Interim In-Service Dates

Project Need Justification

This project replaces old Core SAN switches at the Aztec Data Center with current, vendor supported hardware. This project will include redundant fabric to storage environment and a single path to backup environment. Implementation of this project will minimize hardware failure risks and potential data center network/system outages.

Project Alternatives

Replace Core SAN switches or do nothing

Technical Aspects

Project involves procurement and implementation of Core SAN switches. Implementation will include all phases of quality assurance testing before the systems are placed into production.

Project No: 96829314 Data Archiving, Backup and Offsite Storage

Company: 007
Location: 968

Project Information

Construction Start Date 2/1/2016 In Service Date Completion Date 12/31/2016 Page 1

List Interim In-Service Dates

Project Need Justification

This project will evaluate current data back-up and storage technologies and select an optimal solution that best fits PNMR's data backup requirements. PNM Resources has a mandatory obligation to retain certain types of documents off-site. In addition to offsite storage, off-site tape libraries are used to recover data in the event of a disaster impacting the Aztec Data Center. Ensuring that the company has the latest supported technology standards for back-up and off-site storage will help it meet its legal obligations and disaster recovery needs.

Project Alternatives

Upgrade our data back-up and storage hardware and software assets to the latest, supported technology standards or do nothing.

Technical Aspects

Project involves hardware and software procurement and implementation. Implementation will include all phases of quality assurance testing before the systems are placed into production.

Project No: 96829413 Document Management-Employee Medical Records

Company: 007
Location: 968

Project Information

Construction Start Date 4/1/2016 In Service Date Completion Date 12/31/2016 Page 1

List Interim In-Service Dates

Project Need Justification

This project is required for compliance with OSHA 29 CFR 1910.1030 recordkeeping requirements relating to a centralizing medical records and implementing a records management process. This project is necessary to meet the following:

1. OSHA 29 CFR recordkeeping requirements
    a. 29 CFR 1904.33(a) (5 Years)
    b. 29 CFR 1910.1020(d)(i) (Medical: Duration of employment + 30 Years)
    c. 29 CFR 1910.1030(h) (Medical: Duration of employment + 30 Years)
2. PNMR recordkeeping requirements
    a. RSID 264 Medical – Employee
        i. Retention: Tenure of Employment + 30 Years
3. Make records accessible to employees when required
4. Implement a records management process for third party vendor retention of employee medical records

Project Alternatives

None. This is an OSHA-required project.

Technical Aspects

Procure or internally develop a software solution that provides functionality to store and maintain employee medical record information.

Project No: 96829415 GRC Tools

Company: 007
Location: 968

Project Information

Construction Start Date 4/1/2015 In Service Date Completion Date 12/31/2015 Page 1

List Interim In-Service Dates

Project Need Justification

This project implements new Governance, Risk Management and Compliance (GRC) tools to improve efficiency, enable more effective information sharing/reporting to avoid wasteful overlaps and duplications of tasks by different groups in the company. Overlapping and duplicated GRC activities negatively impact both operational costs and GRC metrics.

Project Alternatives

The alternative to this project is to do nothing.

Technical Aspects

Project involves hardware and software procurement and implementation. Implementation will include all phases of quality assurance testing before the system is placed into production.

Project No: 96829426 Self Service Software Portal

Company: 007
Location: 968

Project Information

Construction Start Date 4/1/2015 In Service Date Completion Date 12/31/2015 Page 1

List Interim In-Service Dates

Project Need Justification

This project involves designing and implementing a web portal that will be used by internal business partners to order needed software on-line versus performing this function manual. In addition after the purchase the portal will provide the user with a link that the user can select to download the software directly onto their machine. This project will eliminate the manual ordering process and improve the speed of delivery on customer software requests.

Project Alternatives

The alternative to this project is maintaining the current manual process for software upgrades.

Technical Aspects

Project involves software design and implementation. Implementation will include all phases of quality assurance testing before the system is placed into production.

Project No: 96829512 Warehouse Automation Project

Company: 007
Location: 968

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date 12/31/2015 Page 1

List Interim In-Service Dates

Project Need Justification

This project automates the currently manual process of receiving inventory assets in ABQ. During Phase 1 of this project the Abq warehouse will pilot the new automation system. The system will then be implemented in the remaining 20 PNM warehouses during Phase 2. By implementing this project, PNM expects to achieve significant gains in warehouse staff efficiency and cost savings.

Project Alternatives

Implement this warehouse automation project or do nothing.

Technical Aspects

Involves procuring and implementing Warehouse Automation software and necessary hand-held devices that will interface with PNM's current PassPort Asset Management System. Implementation will include all phases of quality assurance testing before the system is placed into production.

Project No: 96829514 SharePoint Enhancements

Company: 007
Location: 968

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date 12/31/2015 Page 1

List Interim In-Service Dates

Project Need Justification

This project involves adding new SharePoint software functionality to PNMR's current SharePoint platform. SharePoint use continues to grow within PNMR, and with this growth comes new requests for functions/features that are limited or unavailable in the current software. Providing new functionalities and features will allow the employees to take advantage of utilizing this company-wide system in a greater capacity, which reduces the overall cost of ownership of the platform.

Project Alternatives

The alternative to upgrading to new SharePoint modules to meet growing business demand is doing nothing.

Technical Aspects

Project involves the procurement and implementation of new SharePoint system enhancements to meet growing business demand. Implementation will include all phases of quality assurance testing before these new modules are placed in production.

Project No: 96829515 PNM Backup Infrastructure Upgrade

Company: 007
Location: 968

Project Information

Construction Start Date 4/1/2016 In Service Date Completion Date 12/31/2016 Page 1

List Interim In-Service Dates

Project Need Justification

This project upgrades PNM's backup infrastructure system to a new, supported platform. This effort is part of the company's lifecycle management program aimed at replacing backup hardware components that are at end of their useful life and are no longer supported. Data backups are regularly performed to ensure PNM has current, on-hand backup system records and files should a disaster occur or critical hardware fail. Without reliable equipment to perform this backup operation, the availability and/or integrity of backed up data may be at risk.

Project Alternatives

Implement a refresh of PNM's backup infrastructure systems or do nothing.

Technical Aspects

Project involves hardware procurement and implementation. Implementation will include all phases of quality assurance testing before the system is placed into production.

Project No: 96829516 Information Security Platform Upgrade

Company: 007
Location: 968

Project Information

Construction Start Date 8/1/2016 In Service Date Completion Date 12/31/2016 Page 1

List Interim In-Service Dates

Project Need Justification

This project involves evaluating, purchasing and ultimately implementing new technologies to refresh existing security platforms, with the purpose of enhancing the company's IT security tools/systems to ensure network security. Without implementing this project, the company's IT system is more vulnerability to cyber-attacks, security breaches that could result in additional operational cost to restore systems. Furthermore, failure to update IT security systems could make it easier for unauthorized individuals/groups to gain access to sensitive company information.

Project Alternatives

None. These security tools are needed to ensure PNM's systems and data are not compromised thru cyber-attacks. If PNM's systems are vulnerable, the company will be at a significant risk for a cyber- attack which could have a severe financial impact to the Company.

Technical Aspects

Project will involve hardware and software procurement and implementation. Implementation will include all phases of quality assurance testing before the systems are placed in production.

Project No: 96829714 DR Relocation

Company: 007
Location: 968

Project Information

Construction Start Date 1/1/2014 In Service Date Completion Date 12/31/2015 Page 1

List Interim In-Service Dates

Project Need Justification

This project involves planning and implementing a location change of the company's Disaster Recovery facility, currently located at a Hewlett Packard facility in Colorado Springs, CO. Rising costs at this facility warrant the need to find a replacement location. PNM believes that it can find a new vendor/location that will cost less and that will provide better service.

Project Alternatives

Seek a new Disaster Recovery vendor/facility or maintain the status quo.

Technical Aspects

Establish a contract with a new Disaster Recover solution provider and take action to transition the company's Disaster Response activities over to this new vendor.

Project No: 96829814 MS Lync Ent. 2010 upgrade to Microsoft Lync Ent. 2016

Company: 007
Location: 968

Project Information

Construction Start Date 3/1/2015 In Service Date Completion Date 12/31/2015 Page 1

List Interim In-Service Dates

Project Need Justification

This project upgrades the MS Lync system to latest supported version and platform. This effort is part of the company's lifecycle management program, which ensures all of its systems are running on up-to-date vendor supported platforms. Transitioning to the latest version of MS Lync will also enable the company to utilize the new capabilities and features of the updated product, which will allow users to be more efficient in their daily use of this system.

Project Alternatives

Upgrade to MS Lync version 2016 or do nothing.

Technical Aspects

Project will involve software procurement and implementation. Implementation will include all phases of quality assurance testing before being placed into production.

Project No: 96829826 Passport Upgrade/Replacement

Company: 007
Location: 968

Project Information

Construction Start Date 1/1/2016 In Service Date Completion Date 12/31/2015 Page 1

List Interim In-Service Dates

Project Need Justification

The purpose of this project is to upgrade or replace the current PassPort V.10 system, which is at end of life and maintenance support. Given this is a critical system used by PNM and TNMP operations and support service business areas, having a current, supported system will minimize the risk of experiencing extended system downtime,

Project Alternatives

Upgrade or replace current PassPort V.10 system, or do nothing. Doing nothing would result in the continual use of an outdated system that no longer receives support.

Technical Aspects

Project will include assessing current products in the market and determining which product best meets PMNR's needs. After product selection, project will entail procuring and implementing the software to our existing hardware platform. Implementation will include all phased on Quality Assurance testing before the system is placed into production.

Project No: 96832114 MS Windows 2003 Upgrade

Company: 007
Location: 968

Project Information

Construction Start Date 1/1/2014 In Service Date Completion Date 3/31/2015 Page 1

List Interim In-Service Dates

Project Need Justification

This project updates PNM's Windows Server 2003 operating systems to newer, supported Windows 2008 or 2012 versions. These updates are required as part of the company's lifecycle management program, which ensures it is operating on current Microsoft supported systems. Windows 2003 Server support ends in June 2015, at which time Microsoft will no longer be providing updates or security patches for this retired operating system version, making the company vulnerable to network intrusions or cyber-attacks.

Project Alternatives

Upgrade to MS Server 2008 or 2012, or do nothing.

Technical Aspects

Evaluate MS Server 2008 and 2012 options, and procure the software that is ultimately selected. After procurement the system, implementation will occur. Implementation will includes all phases of quality assurance testing before the software is placed into production.

Project No: 96832514 Data Center Network Refresh

Company: 007
Location: 968

Project Information

Construction Start Date 1/1/2015 In Service Date Completion Date 3/31/2015

List Interim In-Service Dates

Project Need Justification

This project upgrades and segments data center hardware and software by redesigning and replacing the infrastructure routers, bridges, and switches. Implementing this solution distributes the company's network hardware and software to various locations. This distribution of hardware and software eliminates operating a single data center, the result of which enhancing overall network security and eliminates the risk of having one data center and one single point of failure.

Project Alternatives

Upgrade and segment the data center network hardware and software or maintain the current status quo.

Technical Aspects

Project will involve hardware and software procurement and implementation. Implementation will include all phases of quality assurance testing before the systems are placed into production.

Project No: 97730514 Downtown Security and NERC Equipment Upgrades

Company: 007
Location: 977

Project Information

Construction Start Date 3/1/2015 In Service Date Completion Date 12/31/2015 Page 1

List Interim In-Service Dates

Project Need Justification

The Security Operations Center in the Downtown Headquarters building needs to be expanded per NERC CIP 006-5 and CIP 014-1 requirements relating to monitoring. New CCTV monitoring equipment is needed to ensure compliance with NERC requirements. The Downtown building currently lacks sufficient security camera coverage and the cameras that are in place are old and need to be replaced. This project will ensure both building and occupant safety.

Project Alternatives

None - this project is required by NERC.

Technical Aspects

The technical aspects of this project include the addition of new CCTV security monitoring equipment and security cameras.

Project No: 97730515 Downtown Building Improvements

Company: 007
Location: 977

Project Information

Construction Start Date 3/1/2015 In Service Date Completion Date 12/31/2015 Page 1

List Interim In-Service Dates

Project Need Justification

In 2015, this project will fund downtown building improvements including repaving the Downtown West parking lot, installing a building communication system on all floors downtown, and completing the wiring/cabling for the BTS Storage building project that started in 2014. The Downtown West parking lot is in disrepair and in need of asphalt replacement to maintain safety. There is not currently a central communication system for the Downtown building. This project involves installing a monitor on each floor to provide information (e.g., evacuation directions, program updates, meeting and conference locations, etc.) that can be centrally managed on a real-time basis. The balance of the cabling/wiring for the BTS storage building will be completed from this project. This will provide the network capability for system/equipment testing. (Note: this project differs from 97731614, as that project is for "Life Safety Code Upgrades" that are mandated by a local, state or federal agency.)

Project Alternatives

The alternative is to continue the ongoing repair and maintenance of the Downtown West parking lot and not having the ability to communicate important information real-time via a centrally controlled communications system. Since this project involves completing the wiring/cabling of the BTS Storage building, the only alternative is to not completely wire/cable the building - an option that is not a true alternative.

Technical Aspects

The technical aspects of these projects include:
1) Replacing the asphalt in the Downtown West parking lot
2) Installing electronic video monitors on each floor and a central keyboard and control system
3) Installing CAT6 cabling for network access in the BTS Storage building

Project No: 97731215 Emergency Response Center (Data Center Portable

Company: 007
Location: 977

Project Information

Construction Start Date 2/1/2015 In Service Date Completion Date 12/31/2015 Page 1

List Interim In-Service Dates

Project Need Justification

This building will accommodate the storage of critical IT and Telecommunications equipment currently stored in multiple areas of the Aztec compound. Having a single storage site will improve inventory control, security access and planning requirements for BTS personnel. The current BTS storage building on the Aztec campus will better serve the emergency response center that is currently at the Downtown Headquarters.

Project Alternatives

The alternative is to leave the Emergency Response Center (ERC) in the Downtown Headquarters and continuing to utilize multiple storage areas at Aztec. Purchasing a new building for the Emergency Response Center was selected as the preferred solution to ensure a permanent setup that management and work teams can use for emergency response purposes. PNM will move from a cold site to a hot testing site with this building.

Technical Aspects

This project involves the purchase of a stand-alone steel building that will be transported to a site behind the Aztec/Data center. This project also involves the installation of a roll-up door, entrance door, insulation, wiring/cabling, computer systems, and network connectivity to building. For 2015, this building will be wired with CAT6 wiring for network access.

Project No: 97731614 Downtown Life Safety Code Upgrades

Company: 007
Location: 977

Project Information

Construction Start Date 7/1/2014 In Service Date Completion Date 12/31/2014 Page 1

List Interim In-Service Dates

Project Need Justification

This is a contingency project that will be used to fund building life safety upgrades as dictated by city, state, county and federal guidelines. These natures of these upgrades are communicated to PNM after a fire marshal or other authority inspects the building.

Project Alternatives

These project funds would not be utilized unless dictated by a governmental or regulatory authority.

Technical Aspects

Project would include additional equipment/repairs as directed by a governmental or regulatory authority to address fire safety issues.

Project No: 97732014 Corporate CD Burner Replacement

Company: 007
Location: 977

Project Information

Construction Start Date 6/12/2014 In Service Date Completion Date 9/30/2014 Page 1

List Interim In-Service Dates

Project Need Justification

The current CD burner system was purchased in 2007 and is no longer supported by the manufacturer. This replacement CD burner will be used on a regular basis to create large volumes of CDs for regulatory filings and marketing campaigns.

Project Alternatives

Continue to utilize the current system without manufacturer support.

Technical Aspects

PNM will purchase and install a new CD burner equipment system .

Project No: 97733116 Graphics Equipment

Company: 007
Location: 977

Project Information

Construction Start Date 4/1/2016 In Service Date Completion Date 12/31/2016 Page 1

List Interim In-Service Dates

Project Need Justification

This project is a wedge account for Graphics/Mailroom equipment replacement. The equipment replacements are scheduled as follows:
2016 - MICR Check Printers and Paper Cutter
2017 - Plotter
2018 - Mail Inserter
2019 - Equipment to be Determined
It is anticipated that the current equipment will be out-of-date with changing technology and incompatible with current software versions at the time of the proposed replacement.

Project Alternatives

The alternative is to repair the equipment, perform breakdown maintenance, or have an outside vendor assume responsibility for the service. These options were not selected because the potential long-term costs of maintaining aged equipment would be greater than the cost of purchasing new equipment. In addition, new equipment would be more reliable and reduce the need to rely on an outside vendor if equipment failure occurred.

Technical Aspects

Equipment replacement of the MICR check printers, paper cutter, plotter, mail inserter, and postage machine based on vendor proposals and analysis at the time of the request.

Project No: 99328015 Career Management

Company: 007
Location: 993

Project Information

Construction Start Date 4/1/2015 In Service Date Completion Date 12/31/2016 Page 1

List Interim In-Service Dates

Project Need Justification

This project implements the CareerPath module into the company's PeopleSoft HR system that will allow it to create/design individual career paths and succession plans for employees within PNMR. There currently is not a standardized tool for Company employees to use to set-up and manage these activities. Using this module in the current PeopleSoft system will enable the company to extract more value and increase the output from the PeopleSoft system. The increased output will reduce the overall cost of ownership of the system.

Project Alternatives

The alternatives are finding a similar tool that may or may not work with PeopleSoft or do nothing.

Technical Aspects

Project includes software procurement and implementation. Implementation will include all phases of quality assurance testing before the system is placed into production.

Project No: 99328515 On/off-Boarding Management

Company: 007
Location: 993

Project Information

Construction Start Date 6/1/2015 In Service Date Completion Date 12/31/2016 Page 1

List Interim In-Service Dates

Project Need Justification

This project provides a complimentary tool for HR to use to manage the employee on and off-boarding process. PNM's PeopleSoft system does not have the capability to perform this function and its business partners have requested PNM find a low-cost tool that can interface with the PeopleSoft system to meet their needs. This process is currently performed manually and as a result the task is cumbersome and time consuming. Using an automated tool to help track and manage employees during the on and off-boarding process would result in efficiency gains that will ultimately save time and money.

Project Alternatives

The alternative is not implementing this new tool and continuing to utilize the previous system which is cumbersome and time consuming.

Technical Aspects

Project involves software procurement and implementation. Implementation will involve interfacing with the current PeopleSoft HR system and completing all phases of Quality Assurance testing before the system is placed into production.
