

Dear PNM Customer,

If you have refrigerated central air conditioning or a heat pump, you can help reduce electric demand, protect the environment, and ensure a brighter future for years to come by joining PNM Power Saver.

Here's how it works.

We install a web-programmable thermostat in your home. When demand for electricity is at its highest, your thermostat will receive a radio signal telling it to conserve energy during a set period of time. During these activation periods, the compressor will cycle "on" half the time it otherwise would. Your fan will continue to circulate cool air throughout your home.

From June 1 through September 30, when there is a sudden increased demand for electricity, we'll

coordinate participating refrigerated air conditioning units to help manage energy distribution. Participants receive **\$25** each year at the end of the summer.

PNM Power Saver events will only ever happen during the week, and not on weekends or holidays. Each event will last no more than four hours on any given day.

Visit PNMpowersaver.com or call **1-866-471-7906** for more information or to sign up.

Together, we can manage our energy resources and keep our future bright.

Elisha Miranda-Pohl

PNM Power Saver Program Manager

Only new program participants are eligible for this offer.

PNM.com

Here's how PNM Power Saver works for you.

- Reduce greenhouse gas emissions that contribute to climate change
- Ensure a ready regional energy supply during critical times
- Keep the power grid operating optimally
- Keep electricity rates lower longer
- Receive **\$25** each year for doing your part for New Mexico's environment

Join PNM Power Saver and receive:

- a web-programmable thermostat that you can control via your smartphone
- an annual **\$25** thank you check
