1 How an Evaporative Cooler Works

A simple example is the cooling you feel when stepping out of a swimming pool – the water evaporates quickly from your body, taking heat with it. Evaporative coolers do essentially the same thing by drawing hot air through wet pads using a fan or blower. As water evaporates from the pads, it takes heat from the air with it, resulting in up to 25 degree cooler air being discharged from the unit.

2 Energy Savings

An evaporative cooler consumes only one-fourth of the electricity as a refrigerated air conditioning unit.
