PUBLIC SERVICE COMPANY OF NEW MEXICO
ELECTRIC SERVICES
6th Revised Rider No. 51
Canceling 5th Revised Rider No. 51

ENERGY TRANSITION CHARGES

A) EXPLANATION OF RIDER: Pursuant to the terms of the Energy Transition Act ("ETA"), NMSA 1978, §§ 62-18-1 to -23, and the Financing Order adopted by the New Mexico Public Regulation Commission ("NMPRC") in Case No. 19-00018-UT on April 1, 2020, this Rider sets forth the methodology to calculate the non-bypassable Energy Transition Charges for customers taking retail service under PNM retail rates.

B) DEFINITIONS:

a) **Energy Transition Charge ("ETA Charge"):** The non-bypassable charge, as required in ETA Section 5(F)(3), assessed to PNM Customers to recover Energy Transition Costs including True-up Adjustments.

b) **Energy Transition Costs ("ETA Costs"):** The upfront and ongoing cost of the Energy Transition Bonds.

c) **Energy Transition Cost Allocators:** The percentages used to allocate the ETA Costs to customer classes consistent with the production cost allocation methodology established by the NMPRC in PNM's most recent rate case.

d) **True-up Adjustment:** The adjustment of Energy Transition Charges to correct for any over or under recovery of Energy Transition Costs from prior periods and to ensure timely payment of scheduled principal and interest (or deposits to sinking funds in respect of principal and interest) and other ongoing ETA Costs.

e) **True-up Period:** The period over which actual ETA Cost recovery is compared to planned recovery. Initially, the period from issuance of the bonds to the first scheduled debt payment date, then every six-months, or less, as required in ETA Section 6(B). For the final two years prior to final maturity of the Bonds, the adjustment period is three months as required in ETA Section 6(C).

f) **Forecast Period:** The 12-month period including the next True-up Period that is used for all customer count, customer load, customer demand, and ETA costs forecasts.

g) **Final ETA Reconciliation:** Section 4(B)(10) of the ETA.

h) **SPE:** [SPE], LLC, the special purpose entity identified in the Financing Order (the "SPE").

C) APPLICABILITY: The Energy Transition Charge applies to all customers taking service under the following PNM Rate Schedules: 1A, 1B, 2A, 2B, 3B, 3D, 3C, 3E, 3F, 4B, 5B, 10A, 10B, 11B, 15B, 30B, 33B, 35B, 36B, 6 and 20. Should any new PNM Rate Schedules be added during the time that this Rider is in effect, Energy Transition Charges will be derived during the next applicable true up filing. All charges assessed and collected under this rider are owned by the SPE. PNM (or any successor utility) is acting as collection agent and servicer for the SPE during the time that this rider is in effect.

Rate Schedule	Customer Charge ($/Bill)	Demand Charge ($/kW)	Light Charge ($/Light)
30B - Industrial Large Service (>= 30,000 kW)	X (Per Indiv. Cust.)		
33B: Large Service for Station Power TOU	X (Per Indiv. Cust.)		
35B: Large Power Service (>=3,000 kW TOU)	X (Per Indiv. Cust.)		
36B: Special Service - Renewable Energy Resources	X (Per Indiv. Cust.)		
6 - Private Area Lighting			X
20 – Streetlighting			X

E) RATE ADJUSTMENT PROVISIONS FOR ENERGY TRANSITION COST ALLOCATORS:

The Energy Transition Cost allocators shall be reset every six months in accordance with the timing set forth in the ETA Section 6.

The cost elements that will be recovered through the ETA Rider shall include the debt service, any adjustments necessary to account for prior over/under recovery, and any other adjustments necessary to ensure the Financing Costs identified in the Financing Order are recovered.

a) The Revenue Requirement includes the up front and ongoing energy transition costs and adjustments for previous period under or over recovery.

$$Revenue\ Requirement\ (\$) = Energy\ Transition\ up\ front\ costs + Energy\ Transition\ ongoing\ costs + true\text{-}up\ adjustments$$

b) The Billing Requirement is the Revenue Requirement adjusted for projected collection lag and estimated uncollectable amounts.

$$Billing\ Requirement(\$) = revenue\ requirement\ (\$) + adjustments\ for\ collection\ lag\ and\ estimated\ uncollectable\ amounts$$

c) The Billing Requirement is allocated to individual NMPRC approved rate schedules through Energy Transition Act allocators.
d) The energy transition act allocators are re-calculated, consistent with the NMPRC approved methodology, for each true-up adjustment using the most recent forecasts of load and energy.
e) Applying the updated allocators, the ETA costs are allocated to the individual rate schedules based on the proportion of rate schedule to tariff class forecast energy.

$$rate\ schedule\ revenue\ requirement\ (\$) = revenue\ requirement\ (\$) \times allocator \times \frac{forecast\ rate\ schedule\ energy}{forecast\ customer\ class\ energy}$$

F) **ENERGY TRANSITION CHARGE COMPONENT CALCULATION METHODOLOGY**: Customers receiving service under this Rider will be required to pay a non-bypassable Energy Transition Charge. The Energy Transition Costs to be recovered are allocated to the Rate Schedules in a manner consistent with the production cost allocation methodology approved in the most recent rate case. For each rate schedule, the specific ETA charges are calculated as indicated in the following sections.

a) ETA Charges consist of a demand charge for general power and large power rate schedules (3B, 3C, 3D, 3E, and 4B). The same demand charge is applied to each customer served by the rate schedule.

$$Demand\ Charge\ \left(\frac{\$}{kW}\right) = \frac{rate\ schedule\ billing\ requirement\ (\$)}{forecast\ rate\ schedule\ demand\ (kW)}$$

b) ETA Charges consist of a customer charge for the large service and special service rate schedules: (5B, 15B, 30B, 33B, 35B, and 36B). Each customer served by these rate schedules will have a specific customer charge based on their rate schedule and their percentage of the total rate schedule demand.

$$\text{Individual } Customer\ Charge\ \left(\frac{\$}{bill}\right) = rate\ schedule\ billing\ requirement\ (\$) \times \frac{forecast\ customer\ demand\ (kW)}{forecast\ rate\ schedule\ demand\ (kW)}$$

c) ETA Charges consist of a light charge for the lighting rate schedules (6 and 20). Every account served by one of these rate schedules has the same unit charge.

$$Light\ Charge\ \left(\frac{\$}{light}\right) = \frac{rate\ schedule\ billing\ requirement\ (\$)}{forecast\ rate\ schedule\ light\ count}$$

d) ETA Charges consist of block customer charges for the residential 1A rate schedule. The ETA recovery follows the existing usage blocks in the rate schedule and charges a distinct ETA customer charge for each block.

block$_1$ customer charge is applicable to all customers regardless of net usage.
block$_3$ customer charge is applicable to customers who use energy in block three.

$$block_n\ customer\ charge = \frac{rate\ schedule\ billing\ requirement\ (\$)}{forecast\ block_n\ customers} \times \frac{forecast\ block_n\ energy}{forecast\ Rate\ Schedule\ energy}$$

$$Customer\ Charge\ \left(\frac{\$}{bill}\right) = \sum_{n=1,3} applicable\ block_n\ customer\ charge$$

e) ETA Charges consist of a customer charge for the remaining rate schedules (1B, 2A, 2B, 3F, 10A, 10B, 11B). Every customer served by one of these rate schedules has the same energy charge.

$$Customer\ Charge\ \left(\frac{\$}{bill}\right) = \frac{rate\ schedule\ billing\ requirement\ (\$)}{forecast\ rate\ schedule\ customer\ count}$$
