Free Home Energy Checkups help New Mexicans reduce energy use and save money

(Albuquerque, NM) – PNM is encouraging customers to take advantage of free programs and tools designed to help reduce energy use and manage monthly bills. A PNM Home Energy Checkup gives customers personalized guidance from an Energy Ambassador along with free energy-saving products that can make an immediate difference in their home.

Through the Home Energy Checkup, customers learn practical ways to lower energy use, improve efficiency, and better understand how their home consumes electricity. Each appointment includes energy-saving products such as LED lightbulbs, advanced power strips, weatherstripping and other items that help improve comfort and reduce monthly costs. Customers can choose either an in-home visit or a virtual video call, and both options include a customized report on their home's energy performance.

In-Home Option: A PNM Energy Ambassador visits the home for about 1 to 1.5 hours to assess lighting, heating and cooling systems, insulation and appliances. During the visit, the Ambassador installs energy-saving products and provides a personalized report with recommendations, insights into how the home uses energy and information about eligibility for additional rebates.

Virtual Video Call Option: A PNM Energy Ambassador begins with an introductory call, then conducts a video assessment of the home's lighting, heating and cooling systems, insulation and appliances. After the assessment, the Ambassador emails a personalized report with recommendations and rebate information. Free energy-saving products are mailed to the customer along with installation instructions and details about other programs they may qualify for.

Customers can learn more and schedule an appointment at [PNM.com/checkup](https://www.pnm.com/checkup).

###
