PNM warns customers about copper theft

(Albuquerque, NM) – September is Copper Theft Awareness Month, a time for PNM to educate and warn customers about copper theft and ways to possibly prevent this crime. Throughout September, PNM is alerting residential and business customers about how to identify copper theft, what they can do if they become a victim, how to report it and what steps they can take to deter copper thieves.

Copper is a valuable metal widely used in electrical wiring due to its conductivity and durability. However, its high market value has made it a target for thieves at homes, businesses, scrap sites and utilities. Copper theft can lead to power outages, high repair costs, and dangerous situations for both the public, PNM employees and the thieves themselves.

In 2025, PNM received 46 copper-theft reports from businesses. Copper theft can cost customers tens of thousands of dollars to repair and replace when you factor in the time a business will have to close to make repairs.

Once the copper wires leading to the transformer from the meter base is stolen, customers may find that even though their power is on, it fluctuates, electronics spark, or there is arcing around the meter box or transformer. Copper thieves often leave open the transformers housed in the green metal boxes containing electrical equipment and live wires. **Touching such transformers could be deadly. Stay away, never touch this equipment, and report it to PNM immediately by calling 888-DIAL PNM.**

To deter copper thieves, businesses can install protective devices (like the one pictured below) that barricade the doors to transformers and cover the locks and handles to deter access. Visit [PNM.com/energy- and-copper-theft](https://www.pnm.com/energy-and-copper-theft) for more information.

Residential customers can also take the following steps to deter copper theft at their home:

- Illuminate your yard using motion sensors, especially in known blind spots.
- Install security lighting and/or cameras, specifically around electrical equipment.
- Do not leave equipment/metals exposed and unsecured, as this may attract unwanted attention.
- Join or organize a neighborhood watch network. See something, say something. Sharing of information is key.

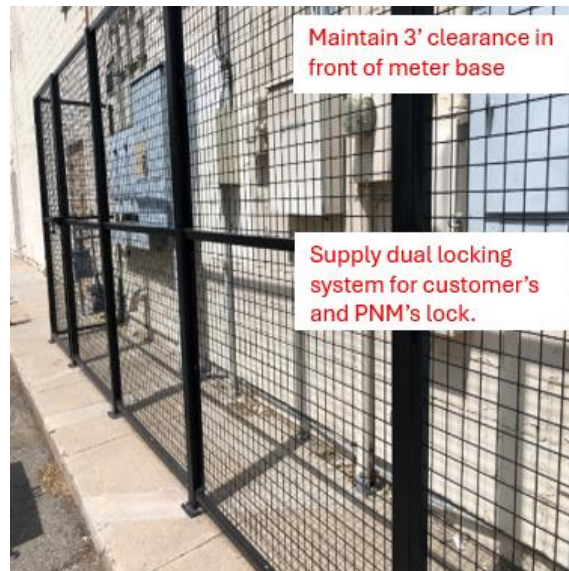

To report suspected copper theft, call PNM immediately at 888-DIAL-PNM (888-342-5766) so PNM can send out a crew to make the area safe. Unless you report an open transformer, PNM may not
